1 Leadership and Governance

What we are trying to achieve

A community that works together in decision making that is defined as ethically, socially and environmentally responsible.

What the result will be

We will have:

- A community that has the opportunity to be involved in decision making
- Open, easy, meaningful, regular and diverse communication between the community and decision makers
- Partnerships and collaborative projects, that meet the community's expectations, needs and challenges
- Knowledgeable, skilled and connected community leaders
- Strong corporate management that is transparent

How we will get there

- 1.1 Inform and engage with the community about what Council does using varied communication channels
- 1.2 Maintain strong partnerships between all stakeholders - local, state and federal — so that they are effective advocates for the community
- 1.3 Demonstrate leadership
- 1.4 Use innovative, efficient and sustainable practices
- 1.5 Ensure strong corporate and financial management that is transparent and accountable

Local Government Remuneration Tribunal

Executive Summary

The *Local Government Act 1993* (the LG Act) requires the Local Government Remuneration Tribunal (the Tribunal) to report to the Minister for Local Government by 1 May each year as to its determination of categories of councils and the maximum and minimum amounts of fees to be paid to mayors, councillors, and chairpersons and members of county councils.

In response to the COVID-19 pandemic the Minister for Local Government, the Hon Shelley Hancock MP, made the *Local Government (General) Amendment (COVID-19) Regulation 2020* which extends the time for the making of this determination to no later than 1 July 2020.

Categories

Section 239 of the LG Act requires the Tribunal to determine the categories of councils and mayoral offices at least once every 3 years. The Tribunal last undertook a significant review of the categories and the allocation of councils into each of those categories in 2017. In accordance with the LG Act the Tribunal undertook a review of the categories and allocation of councils into each of those categories as part of the 2020 review.

In reviewing the categories, the Tribunal examined a range of statistical and demographic data and considered the submissions of councils and Local Government NSW (LGNSW). Having regard to that information, the Tribunal has determined to retain a categorisation model which differentiates councils primarily on the basis of their geographic location, and the other factors including population, the sphere of the council's economic influence and the degree of regional servicing.

For the Metropolitan group the Tribunal has determined to retain the existing categories and has amended the population criteria applicable to Metropolitan Large and Metropolitan Medium. For the Non-Metropolitan group, the Tribunal has determined to: create two new categories - Major Strategic Area and Regional Centre; rename one category - Regional City to Major Regional City; and revise the criteria for some of the existing categories to account for the new categories.

In accordance with section 239 of the LG Act the categories of general purpose councils are determined as follows:

Metropolitan

- Principal CBD
- Major CBD
- Metropolitan Large
- Metropolitan Medium
- Metropolitan Small

Non-metropolitan

- Major Regional City
- Major Strategic Area
- Regional Strategic Area
- Regional Centre
- Regional Rural
- Rural

Local Government Remuneration Tribunal

Fees

The Tribunal has determined that there will be no increase in the minimum and maximum fees applicable to each existing category. For the new categories, the Tribunal has determined fees having regard to relevant relativities.

Local Government Remuneration Tribunal

Section 1 Introduction

1. Section 239 of the LG Act provides for the Tribunal to determine the categories of councils and mayoral offices and to place each council and mayoral office into one of those categories. The categories are to be determined at least once every 3 years.
2. Section 241 of the LG Act provides for the Tribunal to determine, not later than 1 May in each year, for each of the categories determined under section 239, the maximum and minimum amount of fees to be paid to mayors and councillors of councils, as well as chairpersons and members of county councils.
3. In response to the COVID-19 pandemic the Minister for Local Government, the Hon Shelley Hancock MP, made the *Local Government (General) Amendment (COVID-19) Regulation 2020* which extends the time for the making of this determination to no later than 1 July 2020.
4. In determining the maximum and minimum fees payable in each of the categories, the Tribunal is required, pursuant to section 242A (1) of the LG Act, to give effect to the same policies on increases in remuneration as those of the Industrial Relations Commission. The current policy on wages is that public sector wages cannot increase by more than 2.5 per cent, and this includes the maximum and minimum fees payable to councillors and mayors and chairpersons and members of county councils.
5. The Tribunal is however able to determine that a council can be placed in another existing or a new category with a higher range of fees without breaching the Government's wage policy pursuant to section 242A (3) of the LG Act.
6. The Tribunal's determinations take effect from 1 July in each year.

Section 2 2019 Determination

7. The Tribunal considered ten requests for re-categorisation. At the time of making the determination the Tribunal had available to it the 30 June 2018 population data. In reviewing the submissions received the Tribunal applied a multi variable approach assessing each council against all the criteria (not only population) for the requested category and the

Local Government Remuneration Tribunal

relativities within the categories.

8. The Tribunal found that the allocation of councils into the current categories was appropriate but again noted that some of those councils seeking to be moved were likely to meet the criteria for re-categorisation in future determinations.
9. The Tribunal's 2019 Determination was made on 15 April 2019 and provided a general increase of 2.5 per cent which was consistent with the Government's policy on wages.
10. The Tribunal's findings for North Sydney was not addressed in the 2019 Determination and is dealt with in Section 3 below.

Section 3 Review of categories

Scope of review

11. Section 239 of the LG Act requires the Tribunal to determine the categories of councils and mayoral offices at least once every 3 years. The Tribunal last reviewed the categories during the 2017 annual review.
12. In determining categories, the Tribunal is required to have regard to the following matters that are prescribed in section 240 of the LG Act:

"240 (1)

- *the size of areas*
- *the physical terrain of areas*
- *the population of areas and the distribution of the population*
- *the nature and volume of business dealt with by each Council*
- *the nature and extent of the development of areas*
- *the diversity of communities served*
- *the regional, national and international significance of the Council*
- *such matters as the Remuneration Tribunal considers relevant to the provision of efficient and effective local government*
- *such other matters as may be prescribed by the regulations."*

13. The Tribunal foreshadowed in the 2019 Determination of its intention to undertake a review of the categories in accordance with the LG Act:

Local Government Remuneration Tribunal

“12. A few submissions have suggested alternative categorisation models. The Tribunal will consider this in detail in the 2020 review. The Tribunal intends to commence the 2020 annual review earlier than usual to ensure there is time to review the existing model and to examine alternatives. The Tribunal is of the preliminary view that a case may exist to revise the number of categories, and their applicable criteria, particularly for regional and rural councils.”

14. The Tribunal wrote to all mayors in October 2019 advising of the commencement of the 2020 review and invited submissions from councils on the following matters:
1. *Proposed classification model and criteria*
 2. *Allocation in the proposed classification model*
 3. *Range of fees payable in the proposed classification model*
 4. *Other matters*
15. The Tribunal also wrote to the President of Local Government NSW (LGNSW) in similar terms, and subsequently met with the President and Chief Executive of LGNSW. The Tribunal thanks the President and Chief Executive for making the time to meet with the Tribunal.
16. The Tribunal also met with the Mayors and General Managers of Central Coast and Maitland Councils and the Tribunal thanks them for making the time to meet with the Tribunal.

Submissions received - categorisation

17. The Tribunal received 38 submissions from individual councils, a submission from LGNSW and a submission from Regional Cities NSW. Most of the submissions addressed the Tribunal's proposed categorisation model, the allocation of councils into those categories and fees. A summary of the matters raised, and the Tribunal's consideration of those matters is outlined below.

Proposed classification model and criteria

18. Submissions from 20 councils and LGNSW supported the Tribunal's proposal to create a new category of Regional Centre for the Non-Metropolitan group and were of the view

Local Government Remuneration Tribunal

that the range of fees would be somewhere between Regional Strategic Area and Regional Rural.

19. Several submissions from Non-Metropolitan councils proposed alternative changes to the model such as, the merging of the Regional Rural and Rural categories, the creation of a new 'Regional' category and the renaming of Regional City to 'Gateway City' or 'Nationally Significant Regional City'.
20. Four submissions from Metropolitan councils sought the creation of a new Metropolitan category with the title of 'Metropolitan Large – Growth Area' or 'Metropolitan Major'.

Allocation in the proposed classification model

21. The Tribunal proposed to allocate 24 councils in the proposed new category of Regional Centre. Of these 24 councils, 14 provided a submission - 11 councils noted or supported their allocation as Regional Centre and 3 councils sought re-categorisation as Regional Strategic Area.
22. In addition to the 3 councils, another 17 councils sought re-categorisation into one of the categories included in the Tribunal's proposed model or into requested alternative new categories. The 20 re-categorisation requests are addressed in Section 3 – Allocation of councils into categories.

Findings - categorisation

23. The Tribunal acknowledges the significant number of submissions received this year and is grateful for the positive response and effort made in those submissions to comment on the proposed categorisation model and suggest alternatives for consideration.
24. There has been broad support to the Tribunal's proposal to create a new Non-Metropolitan category of Regional Centre and rename Regional City to Major Regional City. On that basis the Tribunal will determine the new category of Regional Centre and rename Regional City to Major Regional City. There have been some new criteria added to the category of Major Regional City to acknowledge the broader national and state focus of these cities which impact upon the operations of the council.
25. After considering the views in submissions the Tribunal re-examined the Non-Metropolitan category of Regional Strategic Area in terms of its criteria and the

Local Government Remuneration Tribunal

characteristics of the councils allocated into it. The Tribunal concluded that the characteristics of the two councils allocated to this category – Central Coast and Lake Macquarie – were sufficiently different to warrant further differentiation. Central Coast has a population greater than 340,000 making it the third largest council by population in NSW and the sixth largest council by population in Australia. It also has the second largest revenue base of all councils in NSW. Central Coast is a significant contributor to the regional economy associated with proximity to and connections with Sydney and the Hunter Region. A new category has been created for Central Coast Council and is to be titled Major Strategic Area. The criteria for this category include local government areas with a minimum population of 300,000, and larger scale and scope to those categorised as Regional Strategic Area. There is no change to the population threshold for the category of Regional Strategic Area, however the other criteria have been amended to account for other changes in the Non-Metropolitan group.

26. The Tribunal's preliminary thinking was that no changes to the categories and criteria for Metropolitan and County Councils were warranted. In respect to the categories, the Tribunal continues to hold that view. In respect to the criteria, after considering submissions the Tribunal re-examined the population criteria for both the Metropolitan Medium and Metropolitan Large categories.

27. North Sydney and Willoughby councils again put forward cases for non-resident workers to be included in the population for Metropolitan Medium. To examine this claim more broadly the Tribunal reviewed non-resident working populations across all metropolitan councils. After careful consideration the Tribunal concluded there was a strong case to recognise the impact on councils of serving significant numbers of non-resident workers. The criteria now provide for councils with a non-resident working population of 50,000 or above to move to another category if their combined resident and non-resident working population exceeds the minimum population threshold. The criteria for Metropolitan Medium and Metropolitan Large have been amended as follows:

Metropolitan Large

Councils may also be categorised as Metropolitan Large if their residential population combined with their non-resident working population exceeds 200,000. To satisfy this criteria the non-resident working population must exceed 50,000.

Metropolitan Medium

Local Government Remuneration Tribunal

Councils may also be categorised as Metropolitan Medium if their residential population combined with their non-resident working population exceeds 100,000. To satisfy this criteria the non-resident working population must exceed 50,000.

28. In making this determination the Tribunal reviewed the criteria for other Metropolitan categories and found that the current population thresholds are appropriate.

29. The revised model which will form the basis of this determination is as follows:

Metropolitan	Non-Metropolitan
<ul style="list-style-type: none"> • Principal CBD • Major CBD • Metropolitan Large • Metropolitan Medium • Metropolitan Small 	<ul style="list-style-type: none"> • Major Regional City • Major Strategic Area • Regional Strategic Area • Regional Centre • Regional Rural • Rural

30. The criteria for each of the categories are outlined at Appendix 1. Minor changes have been made to the criteria for some of the existing categories to account for the new categories. As with the previous categorisation model the predominant factor to guide categorisation is population. Other common features of councils within those categories are also broadly described. These criteria have relevance when population alone does adequately reflect the status of one council compared to others with similar characteristics. In some instances, the additional criteria will be significant enough to warrant the categorisation of a council into a group with a higher population threshold.

31. There is no change to the categorisation of county councils.

Allocation of councils into categories

32. In accordance with section 239 of the LG Act the Tribunal is required to allocate each of the councils into one of the categories. The allocation of councils is outlined in Determination No. 1 of Section 6.

33. Twenty (20) submissions received from councils requested re-categorisation and were considered having regard to the case put forward and the criteria for each category.

34. At the time of making the determination the Tribunal had available to it the 30 June 2019 population data released by the Australian Bureau of Statistics (ABS) on 25 March 2020.

Local Government Remuneration Tribunal

35. A summary of the Tribunal's findings for each of the applications for re-categorisation is outlined in the following paragraphs.

Metropolitan Large Councils

36. Canterbury-Bankstown, Penrith and Blacktown have requested the creation of new categories into which they be re-categorised. Canterbury-Bankstown has requested a new category named 'Metropolitan Major'. Penrith and Blacktown have requested a new category named 'Metropolitan Large – Growth Centre'.
37. The Tribunal considers that Canterbury-Bankstown, Penrith and Blacktown are appropriately categorised as Metropolitan Large.

Metropolitan Medium Councils

38. Inner West has again sought to be re-categorised as Metropolitan Large. The Tribunal outlined in the 2019 determination that Inner West's June 2018 population of 198,024 was below the indicative population of other Metropolitan Large councils, but based on growth predictions it was likely Inner West would meet the minimum population threshold for inclusion in Metropolitan Large in 2020.
39. Inner West's June 2019 population is 200,811 and the council now meets the criteria to be categorised as Metropolitan Large.
40. Ryde has sought to be re-categorised as Metropolitan Large on the basis of the large non-resident working population in the Macquarie Park Business Park (MPBP) precinct, the economic output of the precinct and its array of significant regional services.
41. The Hills has requested the creation of a new category named 'Metropolitan Growth' and that it be categorised into it. Recognition is sought for councils experiencing significant growth. The submission also notes that while Ryde does not meet the residential population criteria for Metropolitan Large it meets the other relevant criteria.
42. As previously discussed, the Tribunal has reviewed the impact of large numbers of non-residents visitors and workers and revised the criteria for Metropolitan Large Councils. Ryde and The Hills have been assessed against the new revised criteria being - *Councils may also be categorised as Metropolitan Large if their residential population combined*

Local Government Remuneration Tribunal

with their non-resident working population exceeds 200,000. To satisfy this criteria the non-resident working population must exceed 50,000.

43. Both Ryde and The Hills have a non-resident working population of more than 50,000 and combined with their resident populations they meet the revised criteria for inclusion in the group of Metropolitan Large councils. Both councils also provide a sphere of economic influence and provide regional services considered akin to those of other metropolitan large councils.

Metropolitan Small Councils

44. Camden, Willoughby and North Sydney have sought to be re-categorised as Metropolitan Medium.
45. The Tribunal outlined in the 2019 determination that Camden's June 2018 population of 94,159 was below the indicative population of other Metropolitan Medium councils, but based on growth predictions it was likely Camden would meet the minimum population threshold for inclusion in Metropolitan Medium in 2020.
46. Camden's June 2019 population is 101,437 and the council now meets the criteria to be categorised as Metropolitan Medium.
47. The Tribunal has previously considered requests from Willoughby and North Sydney Councils to be re-categorised as Metropolitan Medium in 2018 and 2019. Both Councils have populations within the indicative population range for Metropolitan Small councils but well below that of Metropolitan Medium. Both Councils have argued that their scale of operations, degree of regional servicing and high number of non-resident visitors and workers more closely align with the characteristics of Metropolitan Medium Councils.
48. As previously discussed, the Tribunal has reviewed the impact of large numbers of non-resident workers and revised the criteria for Metropolitan Medium Councils. Willoughby and North Sydney have been assessed against the new revised criteria being - *Councils may also be categorised as Metropolitan Medium if their residential population combined with their non-resident working population exceeds 100,000. To satisfy this criteria the non-resident working population must exceed 50,000.*
49. Both Willoughby and North Sydney have a non-resident working population of more than 50,000 and combined with their resident populations they meet the revised criteria for inclusion in the group of Metropolitan Medium councils. Both councils also meet the

Local Government Remuneration Tribunal

other criteria having: a significant regional role as the third and fourth biggest CBDs in Sydney after Sydney City and Parramatta; strategic significance as either transport hubs, business, cultural or employment centres.

50. Both North Sydney and Willoughby meet the criteria for re-categorisation as Metropolitan Medium.

Regional City Councils

51. Newcastle and Wollongong have proposed new categories into which they have sought to be re-categorised. Newcastle has proposed a new category named 'Gateway City' and Wollongong a new category named 'Nationally Significant Regional City'.
52. The Tribunal's revised categorisation model re-named the existing category of Regional City to Major Regional City and found no case to adopt the new categories proposed by Newcastle and Wollongong. The Tribunal considers that both councils are appropriately categorised as Major Regional City.

Regional Strategic Area Councils

53. Central Coast has again sought to be re-categorised as Regional City. The council submits that its characteristics are more like Newcastle and Wollongong (Regional City) and substantially different to Lake Macquarie (Regional Strategic Area).
54. Central Coast does not meet the broader criteria applicable to other councils in the category of Major Regional City - being Newcastle and Wollongong. As previously discussed a new category - Major Strategic Area - has been created to recognise the scale and unique position of Central Coast Council to both the Sydney and Hunter regions.

Local Government Remuneration Tribunal

Regional Rural Councils

55. Bathurst, Maitland, and Shoalhaven noted that under the Tribunal's proposed allocation of councils they would be allocated to the new Regional Centre category, however the three councils sought to be re-categorised as Regional Strategic Area.
56. Bathurst's June 2019 population of 43,618, Maitland's June 2019 population of 85,166 and Shoalhaven's June 2019 population of 105,648 are below the indicative population of Regional Strategic Area councils. The Tribunal considers that Bathurst, Maitland and Shoalhaven are all appropriately categorised as Regional Centre.
57. Bega, Byron and Eurobodalla have sought to be re-categorised to the new Regional Centre category. Bega's June 2019 population of 34,476, Byron's June 2019 population of 35,081 and Eurobodalla's June 2019 population of 38,473 are significantly below the indicative population of Regional Centre councils. These councils have not demonstrated the additional criteria to warrant inclusion in the Regional Centre group.

Rural Councils

58. Muswellbrook and Federation have again sought to be re-categorised as Regional Rural. Muswellbrook's June 2019 population of 16,377 and Federation's June 2019 population of 12,437 are well below the indicative population of Regional Rural councils. Both councils have not demonstrated the additional criteria to warrant inclusion in the Regional Rural group.

Section 4 Fees

59. In determining the maximum and minimum fees payable in each of the categories, the Tribunal is required, pursuant to section 242A of the LG Act, to give effect to the same policies on increases in remuneration as those that the Industrial Relations Commission is required to give effect to under section 146C of the *Industrial Relations Act 1996* (IR Act), when making or varying awards or orders relating to the conditions of employment of public sector employees.
60. The current policy on wages pursuant to section 146C(1)(a) of the IR Act is articulated in the *Industrial Relations (Public Sector Conditions of Employment) Regulation 2014* (IR Regulation 2014). When the Tribunal undertook the annual review the effect of the IR Regulation 2014

Local Government Remuneration Tribunal

was that public sector wages could not increase by more than 2.5 per cent, and this includes the maximum and minimum fees payable to councillors and mayors and chairpersons and members of county councils.

61. The Tribunal received submissions for consideration during the annual review in late 2019. Those submissions were made prior to the pandemic and overwhelmingly supported a 2.5 per cent increase in the ranges of fees which was consistent with the Government's wages policy at the time. A summary of those submissions is outlined in the paragraphs 62 and 63.
62. The LGNSW submission requested that the Tribunal increase fees by the allowable maximum of 2.5 per cent. The submission also reiterated the long-held view that fees for mayors and councillors are well behind, the current fee structure fails to recognise the work of elected representatives and is inadequate to attract and retain individuals with the necessary skills and experience. Comparative information was again presented in respect to board fees, fees paid to mayors and councillors of councils in Queensland, and salaries for members of Parliament. The LGNSW submission also noted the Tribunal's previous observations that it does not have jurisdiction on the matter of non-payment of superannuation but again invited the Tribunal to make a recommendation to the NSW State Government for councillor remuneration to include a payment for superannuation equivalent to the Superannuation Guarantee.
63. Several submissions sought an increase to the allowable maximum of 2.5 per cent acknowledging the restrictions on the Tribunal from the Government's wages policy. Several submissions sought an increase greater than 2.5 per cent by requesting that fees be aligned to councillor fees in Victoria and Queensland or to NSW members of Parliament.
64. Since receiving and considering those submissions there have been a number of factors which have influenced the Tribunal's views in regard to the annual increase. These include the impact of the bushfires and the current COVID-19 pandemic on the state and federal economies and the wellbeing of our communities.
65. To ensure the Tribunal had sufficient time to consider the COVID-19 pandemic the Minister for Local Government, the Hon Shelley Hancock MP, made the *Local Government*

Local Government Remuneration Tribunal

(General) Amendment (COVID-19) Regulation 2020 which extends the time for the making of this determination to no later than 1 July 2020.

66. On 29 May 2020 the Premier, the Hon Gladys Berejiklian MP, made the *Industrial Relations (Public Sector Conditions of Employment) Amendment (Temporary Wages Policy) Regulation 2020*. That regulation amended the IR Regulation 2014 to implement a temporary wages policy, being a 12-month pause on wage increases for public sector employees covered by the IR Act.
67. On 2 June 2020 the amending regulation was disallowed by the Legislative Council. The effect of that disallowance is that the Government's wages policy which provides for increases of up to 2.5 per cent continues to apply.
68. While the Tribunal is required to give effect to the Government's wages policy in the making of this determination, it is open to the Tribunal to determine an increase of up to 2.5 per cent or no increase at all. Given the current economic and social circumstances, the Tribunal has determined that there be no increase in the minimum and maximum fees applicable to each existing category.
69. The minimum and maximum fees for the two new categories of Major Strategic Area and Regional Centre have been set having regard to relevant relativities. The new category of Major Strategic Area has equivalent annual fees to Major Regional City. The new category of Regional Centre has annual fees between those applicable to Regional Strategic Area and Regional Rural. In accordance with the LG Act councils can be placed in a new category with a higher range of fees without breaching the Government's wages policy.

Section 5 Other matters

70. The Tribunal addressed the matter of non-payment of superannuation in the 2019 Determination:

"40. The submission from LGNSW and several councils have again raised the matter of the non-payment of superannuation. The Tribunal addressed this matter in the 2018 determination as outline below and will make no further comment:

Local Government Remuneration Tribunal

“54. The matter of the non-payment of superannuation has been previously raised in submissions to the Tribunal and is not a matter for the Tribunal to determine. Section 251 of the LG Act confirms that councillors are not employees of the council and the fee paid does not constitute a salary under the Act. The Tribunal notes that the Australian Tax Office has made a definitive ruling (ATO ID 2007/205) that allows councillors to redirect their annual fees into superannuation on a pre-tax basis and is a matter for councils (Ref: Councillor Handbook, Oct 2017, Office of Local Government p.69).”

71. By way of clarification, the amount redirected under this ruling is funded from the annual fees as determined by Tribunal – it is not an additional amount funded by the council.
72. The Tribunal notes that the Hon Shelly Hancock MP, Minister for Local Government released the *Councillor superannuation discussion paper* in March 2020, to seek the views of councils and their communities on whether councillors should receive superannuation payments. The deadline for submissions was Friday 8 May 2020.

Conclusion

73. The Tribunal’s determinations have been made with the assistance of the two Assessors - Mr Brian Bell and Mr Tim Hurst. The allocation of councils into each of the categories, pursuant to section 239 of the LG Act, is outlined in Determination No. 1. The maximum and minimum fees paid to councillors and mayors and members and chairpersons of county councils, pursuant to section 241 of the LG Act, are outlined in Determination No. 2.

Local Government Remuneration Tribunal**Determination No. 2- Determination Pursuant to Section 241 of Fees
for Councillors and Mayors**

Pursuant to s.241 of the *Local Government Act 1993*, the annual fees to be paid in each of the categories to Councillors, Mayors, Members and Chairpersons of County Councils effective on and from 1 July 2020 are determined as follows:

Table 4: Fees for General Purpose and County Councils

Category		Councillor/Member Annual Fee		Mayor/Chairperson Additional Fee*	
		Minimum	Maximum	Minimum	Maximum
General Purpose Councils - Metropolitan	Principal CBD	27,640	40,530	169,100	222,510
	Major CBD	18,430	34,140	39,160	110,310
	Metropolitan Large	18,430	30,410	39,160	88,600
	Metropolitan Medium	13,820	25,790	29,360	68,530
	Metropolitan Small	9,190	20,280	19,580	44,230
General Purpose Councils - Non-metropolitan	Major Regional City	18,430	32,040	39,160	99,800
	Major Strategic Area	18,430	32,040	39,160	99,800
	Regional Strategic Area	18,430	30,410	39,160	88,600
	Regional Centre	13,820	24,320	28,750	60,080
	Regional Rural	9,190	20,280	19,580	44,250
	Rural	9,190	12,160	9,780	26,530
County Councils	Water	1,820	10,140	3,920	16,660
	Other	1,820	6,060	3,920	11,060

*This fee must be paid in addition to the fee paid to the Mayor/Chairperson as a Councillor/Member (s.249(2)).

The Local Government Remuneration Tribunal

Signed

Dr Robert Lang

Dated: 10 June 2020

Local Government Remuneration Tribunal

Appendices

Appendix 1 Criteria that apply to categories

Principal CBD

The Council of the City of Sydney (the City of Sydney) is the principal central business district (CBD) in the Sydney Metropolitan area. The City of Sydney is home to Sydney's primary commercial office district with the largest concentration of businesses and retailers in Sydney. The City of Sydney's sphere of economic influence is the greatest of any local government area in Australia.

The CBD is also host to some of the city's most significant transport infrastructure including Central Station, Circular Quay and International Overseas Passenger Terminal. Sydney is recognised globally with its iconic harbour setting and the City of Sydney is host to the city's historical, cultural and ceremonial precincts. The City of Sydney attracts significant visitor numbers and is home to 60 per cent of metropolitan Sydney's hotels.

The role of Lord Mayor of the City of Sydney has significant prominence reflecting the CBD's importance as home to the country's major business centres and public facilities of state and national importance. The Lord Mayor's responsibilities in developing and maintaining relationships with stakeholders, including other councils, state and federal governments, community and business groups, and the media are considered greater than other mayoral roles in NSW.

Major CBD

The Council of the City of Parramatta (City of Parramatta) is the economic capital of Greater Western Sydney and the geographic and demographic centre of Greater Sydney. Parramatta is the second largest economy in NSW (after Sydney CBD) and the sixth largest in Australia.

As a secondary CBD to metropolitan Sydney the Parramatta local government area is a major provider of business and government services with a significant number of organisations relocating their head offices to Parramatta. Public administration and safety have been a growth sector for Parramatta as the State Government has promoted a policy of moving government agencies westward to support economic development beyond the Sydney CBD.

The City of Parramatta provides a broad range of regional services across the Sydney Metropolitan area with a significant transport hub and hospital and educational facilities. The City of Parramatta is home to the Westmead Health and Medical Research precinct which represents the largest concentration of hospital and health services in Australia, servicing Western Sydney and providing other specialised services for the rest of NSW.

The City of Parramatta is also home to a significant number of cultural and sporting facilities (including Sydney Olympic Park) which draw significant domestic and international visitors to the region.

Local Government Remuneration Tribunal**Metropolitan Large**

Councils categorised as Metropolitan Large will typically have a minimum residential population of 200,000.

Councils may also be categorised as Metropolitan Large if their residential population combined with their non-resident working population exceeds 200,000. To satisfy this criteria the non-resident working population must exceed 50,000.

Other features may include:

- total operating revenue exceeding \$200M per annum
- the provision of significant regional services to greater Sydney including, but not limited to, major education, health, retail, sports, other recreation and cultural facilities
- significant industrial, commercial and residential centres and development corridors
- high population growth.

Councils categorised as Metropolitan Large will have a sphere of economic influence and provide regional services considered to be greater than those of other metropolitan councils.

Metropolitan Medium

Councils categorised as Metropolitan Medium will typically have a minimum residential population of 100,000

Councils may also be categorised as Metropolitan Medium if their residential population combined with their non-resident working population exceeds 100,000. To satisfy this criteria the non-resident working population must exceed 50,000

Other features may include:

- total operating revenue exceeding \$100M per annum
- services to greater Sydney including, but not limited to, major education, health, retail, sports, other recreation and cultural facilities
- industrial, commercial and residential centres and development corridors
- high population growth.

The sphere of economic influence, the scale of council operations and the extent of regional servicing would be below that of Metropolitan Large councils.

Metropolitan Small

Councils categorised as Metropolitan Small will typically have a residential population less than 100,000.

Other features which distinguish them from other metropolitan councils include:

- total operating revenue less than \$150M per annum.

While these councils may include some of the facilities and characteristics of both Metropolitan Large and Metropolitan Medium councils the overall sphere of economic influence, the scale of council operations and the extent of regional servicing would be below that of Metropolitan Medium councils.

Local Government Remuneration Tribunal**Major Regional City**

Newcastle City Council and Wollongong City Councils are categorised as Major Regional City. These councils:

- are metropolitan in nature with major residential, commercial and industrial areas
- typically host government departments, major tertiary education and health facilities and incorporate high density commercial and residential development
- provide a full range of higher order services and activities along with arts, culture, recreation, sporting and entertainment facilities to service the wider community and broader region
- have significant transport and freight infrastructure servicing international markets, the capital city and regional areas
- have significant natural and man-made assets to support diverse economic activity, trade and future investment
- typically contain ventures which have a broader State and national focus which impact upon the operations of the council.

Major Strategic Area

Councils categorised as Major Strategic Area will have a minimum population of 300,000.

Other features may include:

- health services, tertiary education services and major regional airports which service the surrounding and wider regional community
- a full range of high-order services including business, office and retail uses with arts, culture, recreation and entertainment centres
- total operating revenue exceeding \$250M per annum
- significant visitor numbers to established tourism ventures and major events that attract state and national attention
- a proximity to Sydney which generates economic opportunities.

Currently, only Central Coast Council meets the criteria to be categorised as a Major Strategic Area. Its population, predicted population growth, and scale of the Council's operations warrant that it be differentiated from other non-metropolitan councils. Central Coast Council is also a significant contributor to the regional economy associated with proximity to and connections with Sydney and the Hunter Region.

Regional Strategic Area

Councils categorised as Regional Strategic Area are differentiated from councils in the Regional Centre category on the basis of their significant population and will typically have a residential population above 200,000.

Other features may include:

- health services, tertiary education services and major regional airports which service the surrounding and wider regional community
- a full range of high-order services including business, office and retail uses with arts, culture, recreation and entertainment centres
- total operating revenue exceeding \$250M per annum
- significant visitor numbers to established tourism ventures and major events that attract state and national attention
- a proximity to Sydney which generates economic opportunities.

Currently, only Lake Macquarie Council meets the criteria to be categorised as a Regional Strategic Area. Its population and overall scale of council operations will be greater than Regional Centre councils.

Local Government Remuneration Tribunal**Regional Centre**

Councils categorised as Regional Centre will typically have a minimum residential population of 40,000.

Other features may include:

- a large city or town providing a significant proportion of the region's housing and employment
- health services, tertiary education services and major regional airports which service the surrounding and wider regional community
- a full range of high-order services including business, office and retail uses with arts, culture, recreation and entertainment centres
- total operating revenue exceeding \$100M per annum
- the highest rates of population growth in regional NSW
- significant visitor numbers to established tourism ventures and major events that attract state and national attention
- a proximity to Sydney which generates economic opportunities.

Councils in the category of Regional Centre are often considered the geographic centre of the region providing services to their immediate and wider catchment communities.

Regional Rural

Councils categorised as Regional Rural will typically have a minimum residential population of 20,000.

Other features may include:

- a large urban population existing alongside a traditional farming sector, and are surrounded by smaller towns and villages
- health services, tertiary education services and regional airports which service a regional community
- a broad range of industries including agricultural, educational, health, professional, government and retail services
- large visitor numbers to established tourism ventures and events.
- Councils in the category of Regional Rural provide a degree of regional servicing below that of a Regional Centre.

Rural

Councils categorised as Rural will typically have a residential population less than 20,000.

Other features may include:

- one or two significant townships combined with a considerable dispersed population spread over a large area and a long distance from a major regional centre
- a limited range of services, facilities and employment opportunities compared to Regional Rural councils
- local economies based on agricultural/resource industries.

County Councils - Water

County councils that provide water and/or sewerage functions with a joint approach in planning and installing large water reticulation and sewerage systems.

County Councils - Other

County councils that administer, control and eradicate declared noxious weeds as a specified Local Control Authority under the *Biosecurity Act 2015*.

2 Your Community Life

What we are trying to achieve

A healthy, inclusive and vibrant community.

What the result will be

We will have:

- Community hubs that provide access to services and social connections
- A safe, caring and connected community
- A healthy and active community that is supported by recreational infrastructure
- A strong community that is able to identify and address social issues
- Community participation in events, programs, festivals and activities

How we will get there

- 2.1 Create a community that feels safe
- 2.2 Advocate for social inclusion and fairness
- 2.3 Provide quality programs, community facilities and public spaces, for example, community halls, parks and vibrant town centres
- 2.4 Empower the community through encouraging active involvement in projects, volunteering and events
- 2.5 Promote a creative and culturally rich community

Removal of Statue of Edmund Barton from Town Green

On behalf of a section of the local community, including the local Birpai Traditional Owners, we request that Port Macquarie- Hastings Council remove Edmund Barton statue on Town Green and in the spirit of genuine reconciliation that Council move forward in partnership with the Birpai traditional owners to ensure that public spaces are culturally safe and reflect cultural inclusivity.

The main points for the removal are;

1. Edmund Barton was explicitly racist and implemented the White Australia Policy that laid a platform for subsequent detrimental policies and legalised White supremacy and systemic racism.
2. Town Green is a known Birpai burial site.
3. The glorification of Barton is inappropriate in this public space which is a method racial vilification as in 2001 council did not take 'all reasonable steps' to prevent this vilification from happening. Further, the presence of the statue shows that we are not a culturally inclusive community. It is suggested the statue is moved to a museum.
4. We believe adequate consultation was not undertaken and Port Macquarie- Hastings Council ignored protests against the statue before it was placed at Town Green. Whilst the removal of the statue appears a divisive issue, racism and culturally unsafe spaces within the community will remain divisive until adequately addressed.
5. We suggest that after the removal, council engage with the Birpai Traditional Owner group through Birpai Local Aboriginal Land council, to devise an appropriate way of recognising our shared history.

See Remove Edmund Barton from Town Green, Port Macquarie petition with 4296 signatories attached.

Kindly
Arlene Mehan
Birpai Traditional Owner

change.org

Recipient: Port Macquarie- Hastings council

Letter: Greetings,

Remove Edmund Barton from Town Green, Port Macquarie

1 INTRODUCTION

1.1 BACKGROUND

Bain Park is a significant recreational area located in the centre of the Wauchope CBD. Council will be engaging in a series of comprehensive community engagement activities in order to prepare a Bain Park Master Plan to guide future development. The Bain Park Master Plan project has been identified in the 2019/2020 Operational Plan as part of Council's regional master planning for recreational facilities to encourage a healthy, inclusive and vibrant community.

Over many years, the Wauchope community has been requesting an overhaul of Bain Park in full by Council. In 2012 an 'All Abilities' playground was developed in consultation with the community and has been very well utilised by locals and visitors to date. Driving the need for Master Plan development have been the requests from local community organisations including the Wauchope Rotary, Lions and District Historical Society approaching Council to consider the development of infrastructure to support increased activation of the space.

1.2 ENGAGEMENT APPROACH

This Community Engagement Report provides a summary of the community engagement activities carried out by the Community Engagement Team during September - October 2019.

The intent of the community engagement was to inform the design of a Master Plan for Bain Park. The creation of a Master Plan will allow Council to create a future design for the space that reflects the community's current and future needs. The Master Plan will provide a strategic direction for the allocation of Council funds into the future, as well as allowing increased opportunities to attract grant funding.

The Master Plan will aim to accommodate a wide range of future community events, including events, performances, movie screenings, expos, etc. whilst also factoring in the adjacent community facilities that have a strong connection to the park and the CBD. The Master Plan will be utilised to inform the Bain Park Plan of Management, which is to be developed later in the financial year.

Widespread community engagement and participation was considered vital to ensure all members of the community had the opportunity to have their say and provide feedback on the development of the plan. Numerous engagement activities were scheduled to allow for a broad cross-section of the community to easily contribute to the visioning and planning process.

1.3 ENGAGEMENT TIMELINES & ACTIVITY

Date	Activity
Late September 2019	Creation of online 'have your say' pages and community survey
Late September 2019	Promotion of community engagement activities via emails, phone calls, flyer and poster drops to residential and shop fronts, social and traditional media.

14, 16, & 24 October 2019	Pop-up community engagement stall in Bain Park
19 October 10am - 2pm 2019	Community Master Planning workshop at Wauchope Community Arts Hall.
23 October 2019	Meeting with Wauchope Arts Council
31 October 2019	Consultation is closed for feedback

Table 1: Community engagement timeline

1.4 WHAT WAS CONSULTED ON

The community was asked the following questions:

1. How often do you visit Bain Park?
2. Why do you visit Bain Park?
3. What do you love most about visiting Bain Park?
4. If you could change one thing about Bain Park, what would that be?
5. If you could add one thing to Bain Park, what would that be?
6. Would you like Bain Park to have a theme?
7. What is your big idea for Bain Park?
8. Additional comments

COUNCIL

Developing a Master Plan for Bain Park

Council is embarking on a series of community engagement activities in order to develop a Master Plan to guide future development of the park.

Let's work together to create a great space!

Visit the Pop-up Information Stall located in Bain Park anytime between:

- 11am to 1pm Monday 14 October
- 11am to 1pm Wednesday 16 October

Register for the Community Workshop:

- 10am - 2pm Saturday 19 October, Wauchope Community Arts Hall

For more information, to register for the Community Workshop or to make an online submission visit haveyoursay.pmhc.nsw.gov.au/bain-park alternatively, please telephone Council on 6581 8111

Survey submissions accepted until Saturday 31 October 2019

Poster

2 ENGAGEMENT RESULTS

2.1 ON SITE POP-UP CONVERSATIONS

- Engagement staff attended the Wauchope Neighbourhood Centre's 'Family Fun Day' on 9 October and conducted three pop-up sessions on site in Bain Park on 14, 16 and 24 October. Over 100 conversations conducted at engagement pop-ups

The following ideas were suggested during the pop-ups:

- Public toilets require upgrade or replacement to make accessible for all
- Install change table in toilets
- Water play
- Increased shaded seating including near scooter track
- Install gas/electric public barbeques
- Inclusion of seating and picnic tables inside playground area
- Adventure playground including flying fox, more play areas for older children
- Provide additional shade over play equipment
- Play options for toddlers, 'regular' swing set
- Nature, imaginative play inclusions - sandpit, logs, etc.
- Inclusion of sheltered picnic tables in open spaces
- Water refill station located centrally in Bain Park

Bain Park users also raised the following issues:

- The playground was looking tired and the inclusions needed some maintenance/upgrading
- The pebble create pathways were patchy due to age/wear and tear and needed resurfacing in sections
- Pedestrian access (such as a wide set of stairs), needed from the Community Arts Hall car park as people were currently jumping over retaining wall and it was crumbling in sections

2.2 BAIN PARK MASTER PLANNING WORKSHOP

A total of 16 people attended the Master Planning Workshop on Saturday 19 October from 10am - 2pm at the Wauchope Community Arts Hall. Participants were guided through a number of tasks throughout the day to identify the following:

- Why they visit Bain Park;
- What they loved about Bain Park;
- What they value and wish to preserve in Bain Park;
- What elements could make Bain Park better;
- What their future vision for Bain Park.

Workshop participants comprised a mixed demographic of locals including representatives from the Wauchope Lions Club, the Rotary Club, the Arts Council and the District Historical Society.

2.3 SURVEY RESULTS

- 47 online surveys submitted via 'Have Your Say'
- 13 hardcopy surveys submitted

Engagement Responses via Have Your Say

AWARE PARTICIPANTS	305

ENGAGED PARTICIPANTS	
Participated in Surveys	47

25 September to 7 November
Total online visits = 429

If Bain Park were themed, what theme would you choose?

How often do you visit Bain Park?

Why do you visit ...

The following is a summary of responses received to open-ended survey questions from survey respondents:

What do you love most about visiting Bain Park?

Beautiful open spaces, it is like Wauchope's 'Town Green', central location, the trees, the cafe, the playground.

If you could change one thing about Bain Park, what would that be?

- Upgrade the toilets - currently no child/adult change table, inaccessible
- Upgrade playground - more equipment for toddlers, nature play options, add regular swings and maintain planter boxes in playground, more shade over playground
- Increased seating and picnic tables around the park, install barbeques
- Plant more trees and install garden beds
- Play equipment/options for older kids

If you could add one thing to Bain Park, what would that be?

- Increased seating and shade
- Regular events like themed market days, community events
- More and diverse play equipment
- Water play
- Improved barbeque facilities

What is your big idea for Bain Park?

- An outstanding intergenerational playground that people visit from all over
- Historical museum and community space
- Outdoor concert area
- A flying-fox
- Options for disabled kids, natural and sensory play
- Include tourist information centre
- Make toilets accessible for all
- Interactive sun dial
- Lots more shade and picnic areas
- A space that all ages can enjoy with water features

2.4 SUBMISSIONS RECEIVED

A summary of the formal submissions received are outlined below (submissions attached in Appendix 1):

1. Wauchope District Historical Society (WDHS)

The submission centres on the relocation of the WDHS's historic church building (currently located on the grounds of Wauchope's Timber Town) to the southern end of the Bain Park with access from Avondale Street. The site required would be

large enough to establish a shopfront for interacting with locals and visitors to accommodate historical research located within a landscaped area suitable for display of larger collection items from the collection. WDHS proposes that Society members would be on hand to assist visitors and locals and manage changing historical exhibits and interactive displays.

2. Wauchope Community Arts Council (WCAC)

The WCAC, established in 1995, manages a multiuse cultural space in the Wauchope Arts Hall. The Hall is activated throughout the year through concerts, events, films, exhibitions and creative workshops.

The WCAC proposes the following recommendations for consideration in the development of the Master Plan:

- Increased power sites throughout Bain Park to accommodate larger events
- Increased shade areas and trees
- Provision for wide steps leading from car park to Bain Park opposite Hall site
- Enhanced pathways (and rails) for people with mobility issues from car park to the north-eastern side of Bain Park
- Resolve issues with car park closures from Council via contracted traffic controllers during events prohibiting access to Hall
- Installation of bi-fold doors across western side of Hall to accommodate larger audiences
- The car park west wall requires repairs and upgrades
- WCAC would like Council to consider the building adjacent the Hall (currently leased by Omnicare) be returned to the Wauchope community and utilised as a shared community space.
- WCAC supports the creation of a 'Gaudi' inspired bench/lounge/wall in Bain Park including water feature for wetting feet and could facilitate community workshops to develop the work.
- WCAC supports the Wauchope District Historical Society's proposal of relocating the historic church to use as their museum venue if it is located at the Avondale Street end of Bain Park.
- Enhance experience of Park users by installing large musical structures through interaction of by wind movement
- Incorporate a labyrinth walking meditation space in the Park
- Free community Wi-Fi
- Upgrade toilet facilities in Bain Park

3. Rotary Club of Wauchope Inc.

Wauchope Rotary strongly proposes that the community would benefit from a multi-use stage structure to accommodate a variety of formal and informal events and activities.

Other ideas for consideration in development of the Master Plan:

- A botanical garden concept for Bain park to highlight and feature local flora for the enjoyment of locals and visitors
- A meandering shared path that circumnavigates the Park to allow joggers, walkers to enjoy the developing views
- The inclusion of two shelters one to the east and one to the west of the current middle pathway surrounded by botanical plantings

**4. Lions Club of Wauchope**

The Lions Club would like to fund the installation of a commemorative plinth-style sundial that includes a 'you are here' feature. In addition, the Club would like to fund the construction and installation of a sundial of human involvement constructed in historically native timbers from the Wauchope region. The Club proposes the two items would be best located adjacent the historic entry gates at the main entrance to the Park via High Street.

3 NEXT STEPS

The Project Team in development of the draft Bain Park Master Plan will now review all feedback, ideas and comments received during the engagement period.

The draft Bain Park Master Plan will then be presented to Council for endorsement.

The endorsed draft Bain Park Master Plan will then be placed on public exhibition for feedback and any feedback will be reviewed by the Project Team. Where appropriate changes will be made to the draft Master Plan.

The Final Masterplan will be presented back to Council for adoption and following adoption the

Project Team will work to source funding to implement the Master Plan.

Wauchope District Historical Society

Port Macquarie-Hastings Council
17 Burrawan Street
Port Macquarie NSW 2444

Attention:
Ms Georgina Perri
Community Planning Coordinator
Strategy & Growth

Dear Georgina

BAIN PARK MASTER PLAN: SUBMISSION BY WAUCHOPE DISTRICT HISTORICAL SOCIETY (WDHS)

Thank you for inviting WDHS to participate in the Bain Park Master Planning Workshop held on 19 October 2019.

While WDHS representatives had the opportunity on the day of making a submission outlining our case, we would like to make a further submission reinforcing our view that a WDHS presence in Bain Park would fit in well with any other community uses likely to be included in any proposed plan. Indeed no stakeholder at the workshop suggested otherwise.

The Wauchope experience

As a fine piece of real estate in the centre of Wauchope it is appropriate that a comprehensive plan be prepared to guide the future development of Bain Park in meeting the needs of all members of the community. While a generous public space compared to other towns - Bellingen comes to mind - it is not unlimited and accordingly there will be intense competition between the various stakeholders for a spot. The key, in our submission, to assessing these competing demands is to find the right balance

between the various interests so that those using the facilities, be they residents, local or international visitors, come away with an experience which is enriching and different from what can be had elsewhere.

Why does the WDHS deserve a spot?

What does the WDHS have to offer that is deserving of inclusion in the plan?

One of the exercises you invited participants to do at the workshop was to pretend that they and their families stopped off at Bain Park to experience the range of attractions on offer in any proposed plan and then write a postcard to a friend conveying those experiences. Not all attractions would be on display on such an occasions - e.g. concerts and large outdoor events - but clearly innovative, inclusive and interactive outdoor play activities for children of all ages would rate a mention. So would nicely landscaped and shaded areas with well-designed facilities, space for larger community activities and the overall feel of the park as a worthwhile stopover.

Wouldn't it be worth a mention also that the stopover also offered something local and unique: historical exhibits and interactive displays for all ages on the history of settlement in the Hastings Valley from 1818 right up to the present, housed in a building that is heritage listed and is the oldest extant building in the Wauchope district?

While WDHS has been without a 'home' for the past six years, most of our historical records have been digitised and can be easily researched. Society members will also be on hand to assist. WDHS members have a range of talents including historical and archaeological research, computing and Photoshop skills, curatorial experience, and the preparation of statements of significance on historic artefacts. These will all be put to use to ensure that those using our facilities will have an enriching experience and come away with a greater understanding of the history of the Hastings Valley, the lives of the original inhabitants, and an appreciation of the efforts of the pioneering settlers.

**The WDHS site**

We envisage a site on the southern end of the park with access from Avondale Street large enough for us to relocate our historic church building as well as establish a shopfront for interacting with locals and visitors. This space will accommodate computers with appropriate software to enable people to conduct their own research with assistance from WDHS members. We propose to landscape the area surrounding our church museum for the display, from time to time, of larger items in our collection.

Other suggestions include an arboretum with plantings of trees that have made a significant contribution to the economic development of the Wauchope District. In recognition of long Aboriginal settlement of the area, tens of thousands of years before white settlement, plans could include plantings of bush tucker and medicinal plants.

Summary

We are very excited by the opportunities that the Bain Park Master Plan offers the Society to make a significant contribution to the future development of the park. We believe we have something special to offer which can, and will, fit in well with other proposed activities in the park.

We look forward to working with Council and other stakeholders in settling, and bringing to fruition, a plan that will provide a guide to future development of the park offering a range of enriching experiences for locals and visitors alike.

Yours faithfully

George Hegarty
Secretary

Wauchope Community Arts Council
BAIN PARK Master Plan Submission

October 2019

Wauchope Arts Council welcomes the opportunity to lodge a Bain Park Master Plan submission.

Wauchope Arts, in the Cultural Precinct of Wauchope beside Bain Park, was established in 1995 under the umbrella of ARTS NSW to both nurture and showcase local artists/creatives, particularly young artists, and to bring world class performers to the Hastings Region. It is renowned as one of the most charming venues on the NSW MNC and attracts musicians/performers of extraordinary quality.

This strategy has put Wauchope on the cultural map with people from across the Mid North Coast/NSW attending events (Att 1) and artists from around the globe requesting to perform. Artists such as Wallis Bird (Ireland/Berlin), The East Pointers (Canada) and other high profile Australian Artists such as David Bridie, Fred Smith, Chaika and Jeff Lang all happily advertise tours of Sydney, Melbourne and Wauchope.

Events, films, markets, festivals, exhibitions and creative workshops are also staged at the hall (Att 3 and 4).

Wauchope Arts Council supports and auspices fledgling local groups, most recently Mosaic Choir and Rockin' with Dave and Friends.

With 568 subscribers and 354 active members we create opportunities to bring more people to Wauchope. Collaborating with like-minded people and organisations, including the PMHC's Place Making Team, Frugal Forest, Mid Coast Waste, Wauchope TAFE and Wauchope Chamber of Commerce. Through various festivals and events we provide forums for the community to: learn new skills; educate and stimulate discussion about the environment; reduce waste; save water and explore new ways of thinking (Att 3 and 4).

Our motto "Arts from the Heart" is a fitting description of what we, as a small group of committed volunteers, do.

'Wauchope Arts is an absolute highlight along the touring way, we would love to come back and play... really any time you will have us' Hussey Hicks

"Please pass on my thanks to the beautiful group of people that I met at Wauchope Community Arts. So many organisations use the word 'community' in their name – but Wauchope Community Arts epitomised community.....". Michael Waugh

The main aims of Wauchope Community Arts Council are:

COMMUNITY ENRICHMENT – to bring a diverse range of performers and cultural experiences to the Wauchope Region (Att 3, 4 and 5).

A recent survey of attendees commented.....

"it is a fabulous place – great sense of community", "really appreciate the unique experience offered by Wauchope Arts, it is an excellent Regional asset", "...enjoy the shows.. worth the 75 km travel each way", "great organisation that needs wider exposure and potentially more support from Council and State agencies",

COMMUNITY SUPPORT – arts and culture make a significant contribution to the social and economic wellbeing of our community.

- We strive to create a safe, inclusive space for a diverse range of people to meet, especially as people are geographically isolated. It helps build the social capital of the district.
- We patronise and promote local businesses for goods and services.
- Our patrons add to the local economy frequenting local restaurants, motels and other businesses.

COMMUNITY COLLABORATION – some events are held in conjunction with other groups or to raise money/support for organisations such as:

Creative Wauchope; Hastings Women and Children's Refuge; Woodford Folk Festival; Frugal Forest' Pappinbarra Progress Association' Djiyagan Dhanbaan; Mid North Coast Refugee Group; Wauchope Chamber of Commerce; PMHC Council; Hastings Co-op; Wauchope Progress Association to name a few (Att 3 and 4).

BAIN PARK CULTURAL PRECINCT MASTERPLAN

In addition to the events and arts activities at the hall, the natural amphitheatre in the park is already a cultural site, used for family friendly outdoor performances, festivals, markets, concerts, workshops, as a play area for kids and meeting place.

Wauchope Arts has utilised the park for Festivals such as the Junkfest, Tree Fiesta and a variety of other activities. Other users have utilised the park and the hall together to great advantage, such as Creative Wauchope, and joint Christian celebrations. The car park has been closed at times to facilitate use of a broader space including our recent addition of an undercover outdoor area. It makes a very festive, connected event with possibility for undercover as well as open-air activities.

Such events could be significantly enhanced by:

- more power sites throughout the park
- more shade areas and trees
- wide steps leading from the car park to the park
- enhanced pathways (and rails) for people with mobility issues from the car park to the park at the north eastern side of the park
- resolve issues with car park closure due to council requesting Men at Work traffic controllers. This is very costly and prohibitive.

Rain, hail or shine, Wauchope Arts provides an undercover, dry, indoor space for a huge range of community activities, and brings more people to the vicinity than just about anyone else bar the café. Supporting that fact and facilitating our efforts as an indoor facility adjoining the park is of primary importance.

From Wauchope Arts point of view a master plan should enhance and build on, but not disrupt the existing community cultural activities.

To this end we request:

- Proposed park developments compliment Wauchope Arts activities
- Any outdoor stage be completed in partnership with Wauchope Arts, neighbours and be placed at the Avondale St end of Bain Park.
- Programmes on an outdoor stage are booked in cohesion and consideration with Wauchope Arts hall activities

MAIN RECOMMENDATIONS:

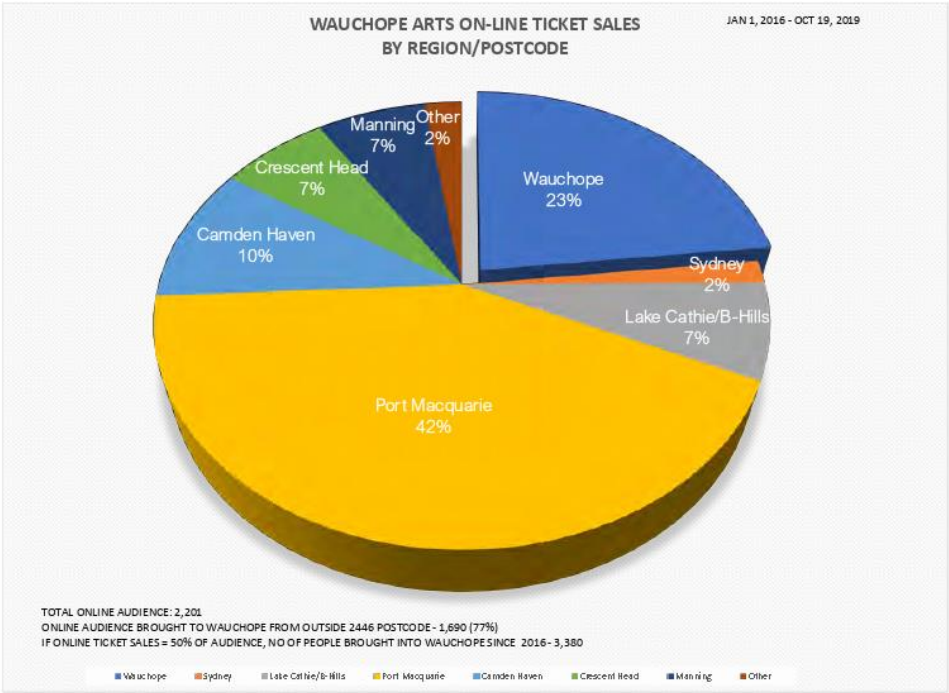

1. Wauchope Arts Council would like to expand our activities, however our capacity is currently limited by:
 - a. having to run the 355 committee for PMHC. **We request the Hall be handed back to Wauchope Arts Community Council**, as it was formally handed over to us in 1997. **We would like to resume that arrangement. It was and is inappropriate to have us under the 355 committee structure.**
 - b. Limit of 115 people capacity. Currently we are looking at options to facilitate expansion of the hall, for mainly two reasons. At 115 the hall is “bursting at the seams” and several shows per year are sold out. We do not like to disappoint people who have travelled from all over the MNC and at 115 people, particularly in summer, the hall can be stifling. **Our recommendation is to install bi-fold doors across the western side of the building in order to create more space for larger audiences.**
 - c. A need to upgrade the Hall given it is Wauchope’s and surrounding hamlets de-facto cultural centre. **There is an urgent need for increased storage space, upgraded kitchen (preferably commercial), a Green Room for Artists (they are currently using the small Store Room) and possibly a new roof.**
 - d. A need to **employ a Community/Arts officer** to coordinate activities as volunteers have limited time.
2. Wauchope Arts would like to see better connectivity between the hall, the car park and Bain Park. Our capacity to provide events across both the Hall and the park is limited by:
 - a. Lack of electrical outlets in the park. **Request electrical outlets to the west and south.** This would greatly assist us and other community organisations to stage events. Currently there is only one outlet to the east.
 - b. Poor access from the Car Park to the park. **We would like to see wide steps into the park (from the carpark) across from the hall and upgrade the north eastern pathway/wheelchair access as well as installing a rail so people with various mobility issues have better access to the park from the car park.** Currently for events we use a portable set of stairs.
 - c. Issues with car park closure due to council requesting Men at Work traffic controllers. This is very costly and prohibitive for Community Groups. **Request council investigate other options to close the southern end of the car park for events and encourage use of Avon St for parking.**

- d. The car park west wall requires repairs and upgrading
3. **Wauchope Arts would like to see the Council owned building (currently rented by Omnicare) returned to community** use as a shared facility that various groups could utilise. Wauchope Arts could facilitate a variety of workshops as it has several small rooms perfect for events like Creative Wauchope or for travelling artists. It also has a kitchen, garden area and toilet facilities perfect for a shared community art space.
 4. **Wauchope Arts would be an enthusiastic supporter of any proposal to create a 'Gaudi park bench/lounge/wall'** and could envisage this along with the water feature for people to sit in a circle wetting their feet and cooling off in the summer months. We have the skills in the committee and our arts community to assist with this project.
 5. **We welcome the Historical Society's proposal of re locating the Museum** as long as it is at the Avondale St end for access and parking. It will add an important cultural/ educational experience for residents and visitors.
 6. Enhance the experience of the park users by **adding large musical structures** that either create sound by wind or by playing them.
 7. **Incorporate a Labrynth walking meditation** space into the park.

Other ideas/issues:

- Cycling in Wauchope: **a charging station for e-bikes** could be incorporated as well as **further lock up stations for bikes**.
- A bank of hire bikes similar to outside the Glasshouse (but not so expensive) would also be a great addition.
- **A map in Bain Park re possible rides/walks in the area.**
- **Charging station in the car park for EV's.**
- Ability to organise events in the park if you don't have **Broadband Liability insurance is an issue for small groups**. This is costly and not flexible for Community Groups.
- **Free community Wi-fi**
- **Upgraded toilet facilities in Bain Park** to accommodate people with various needs and installation of a change table for adults.

ATT 2, Facebook post from Wallis Bird (Ireland/Berlin)

Wallis Bird
10 November 2017

Never get tired of the things you love.

On this tour we revisit some venues we first played in 11 months ago. It already feels like an old friend to come back to. Properly. This place made waves for me, Australia feels particularly special.

Tonight was our first gig in Wauchops Community Arts Council, a better gig crowd and music wise, a total delight to be part of. Let me tell you why. I spent a good bit of my career coming back to the same venues out of sheer loyalty to something; be it the people, the space, the familiar vibe, of they were good to us, it wasn't broke, we didn't fix it. Often times I thought, why don't we try somewhere else, or did try somewhere else, and that's fine, but developing a repertoire with somewhere like tonight is special. As time passes, gigs easily blend but to notice things like tonight, the development of our acquaintance or friendship, seeing how the committee each bring a dish to the table for us, they've received funding for their passionate work and upped the sound system, they've created a beautiful mural made from locally donated bricks. I see the same lovely faces, lots of new ones, give a proper hug to celebrate that we made it back, see how their life has been or how their projects from last year are coming along, hearing they got the grand piano tuned and spruced up- it feels like home. That's what makes touring special, the personality and singular touches each human bring to the space, we see and feel it very strongly as performers. You see it from us if we can't be lucky to be there, when it's so personal you better love what you do.

Tonight was Bumper, thank you all x

Denna Fideck This was one of the best music experiences I've had, Wallis is a true artist. Brave enough to be different and confident in her talent to let it loose on us. Your energy is contagious, I'm sure I was not the only one that felt like I had just witnessed something incredible. Thankyou Wallis!

Like · Reply · 1y

Jan Dennis It was unforgettable - musically, emotionally and creatively. The mood in the room was a first and thoroughly deserved Wallis. We felt we were in the presence of a genius and a kick-ass angel. WOW!!

Like · Reply · 1y

Elizabeth Robinson Utterly amazing! So uplifting and creatively WOW! You took your two youngest fans on one hell of a ride that they surely won't forget! Thank you for your warmth, your kindness, your energy and well, just everything!

Bain Park Master Plan - Consultations

Thank you for the opportunity to contribute ideas to the Master Plan for Bain Park, Wauchope.

As previously submitted to the August 2019 Wauchope Community Plan consultations, Wauchope Rotary strongly proposes that the Community would benefit from a suitable multi use structure to support various formal and informal activities held in the earthen amphitheatre. Council via Melissa Watkins, Director Development & Environment has acknowledged receipt of the proposal.

We would like to add other ideas for consideration in developing the Master Plan.

Represented on the attached drawing are a few concepts.

- Wauchope does not have a botanical garden and the incorporation of this concept in the plan should work well.
- A meandering shared path could circumnavigate the park to allow walkers, joggers, push-bike riders to enjoy the developing views.
- The above path could meander through native and introduced botanical plantings including shade trees and other plantings.
- The utility of the open spaces could be improved by two shelters, one to the east and one to the west of the current middle pathway.
- Each shelter could face an open play area for picnickers and passive activities, surrounded by the botanical plantings.

Yours in Rotary service

BAIN PARK MASTER PLAN
(DRAFT)

REVISION HISTORY				
ISSUE		DATE	AUTHOR	APPROVED
1	DRAFT MASTER PLAN	18 March 2020	Craig Luff	Liam Bulley

Community Engagement

It is widely recognised that Bain Park is a significant open space and recreation asset for the Wauchope CBD area. Over the years, the Wauchope community has been requesting an overhaul of Bain Park. In 2012, in consultation with the community, an 'All Abilities' playground was developed and to date it has been well utilised by locals and visitors. Wauchope community groups including Rotary, Lions Club and the District Historical Society, have approached Council to consider the development of infrastructure to support an increase in activation of the space.

On this basis, Council has prioritised development of a master plan to outline the community's vision.

Council has been undertaking widespread community engagement with the Wauchope community over the last 12 months in development of the Community Plan and the Bain Park Master Plan.

The Wauchope Community Plan reflects the community's priorities and aspirations for the future of their place. The following Goals and Action items identified support the findings of the Bain Park Master Planning engagement:

Goal 1

We live in a safe, friendly and connected community

Action 1.1: Work with Council, schools and service providers to ensure an increase in activities and facilities for young people, such as a youth drop-in centre with staff and programming.

Action 1.2: Advocate for permanent community-access facilities for community groups to meet and connect including disadvantaged groups.

Goal 2

Activate Wauchope

Action 2.1: Develop a plan for increased lighting and power and other infrastructure in public spaces for events/festivals/community use.

Community consultation for Bain Park Masterplan was conducted at the Wauchope Arts Hall on in September 2019. A summary of the ideas that were suggested by the community from these conversations:

- Public toilets require upgrade or replacement to make accessible for all
- Install change table in toilets
- Water play
- Increased shaded seating including near scooter track
- Install gas/electric barbecues
- Inclusion of seating and picnic tables inside playground area
- Adventure playground including flying fox, more play areas for older children
- Provide additional shade over play equipment
- Play options for toddlers, 'regular' swing set
- Nature, imaginative play inclusions - sandpit, logs etc.
- Inclusion of sheltered picnic tables in open spaces
- Water refill station located centrally in Bain Park

Bain Park users also raised the following issues:

- The playground was looking tired and the inclusions needed some maintenance/upgrading
- The pebble create pathways were patchy due to age/ wear and tear and needs resurfacing in sections
- Pedestrian access (such as a wide set of stairs) is needed from the Community Arts Hall car park as people were currently jumping over the retaining wall and it was crumbling in sections.

Design Principles

Parks including their embellishments should be located and designed to provide a safe and user friendly environment.

Parks must be accessible and equitable for the entire community. Port Macquarie-Hastings Council are committed to creating and maintaining equitable access.

Parks must be cost effective. Maintenance costs and whole of life cycle asset costs for Parks represent a significant part of the Port Macquarie-Hastings Council's budget. These costs are ultimately passed onto the community through the payment of rates.

Parks must be relevant to community needs and expectations.

Parks should reflect the natural environment and local community values and needs.

Parks must be socially and environmentally sustainable. Port Macquarie-Hastings Council are committed to progressing the concept of Ecologically Sustainable Development (ESD) to ensure enhanced individual and community wellbeing, welfare, equity within and between generations, to ensure the protection of biological diversity and maintain essential ecological processes. Lifestyle flexibility must be catered for in the provision of Parks. Because the demographics of areas can change, reserves must be designed to be flexible and adaptable.

Parks must protect and enhance natural and heritage features and values. Natural and heritage features and values need to be preserved and conserved to ensure that communities can access and enjoy them, and that they remain intact for future generations to enjoy.

Parks must be innovative. It is important that the design of reserves is innovative in its regard to form and function and response to existing environment and surrounds. An individual design response for parks rather than a generic design response is required for each setting, site and community.

P3/11

BAIN PARK MASTER PLAN (DRAFT)
COMMUNITY ENGAGEMENT
& DESIGN PRINCIPLES

- 1) Limited connectivity between Rotary Youth Hall / Wauchope Arts Hall and Bain Park.
- 2) Rotary Youth Hall and Wauchope Arts Hall do not meet current user needs and are dated in form / condition.
- 3) Bain Park has low street presence / kerb appeal from High Street.
- 4) Views into Bain Park from High Street are interrupted by planting and gates at front of park limiting passive surveillance.
- 5) Narrow pavement at frontage of Cafe has limited opportunity for outdoor dining.
- 6) Position of toilet block results in the space to west being under utilised and limits passive surveillance.
- 7) Existing tree and wall surround in poor condition.
- 8) Lack of commercial / residential frontage to park on Oxley Lane results in limited passive surveillance.
- 9) 5no. Chinese Tallow trees (*Triadica sebifera*) are required to be eradicated under Biosecurity Act 2015 due to being a regional containment priority weed. These trees have Centenarian plaques.
- 10) Existing playground was installed in 2012 and will be scheduled for replacement in approximately 2022. Current position impacts passive surveillance into park and circulation.
- 11) Community plant beds underutilised & poor condition.
- 12) Tree's mature size will outgrow current location. Tree is utilised as Wauchope's Christmas Tree.
- 13) Large shelter not ideal for multiple smaller groups
- 14) Existing trees have good form and provide shade
- 15) Existing pavements in poor condition.
- 16) Southern half of Bain Park has no activities to draw users into park and is underutilised.
- 17) Parking layout on Avondale Street is inefficient.
- 18) Lighting throughout Bain Park is dated / in poor condition.
- 19) Bain Park is not irrigated which results in die back of plants / lawn areas during period of low rainfall.
- 20) Poor quality compacted soils results in limited growth of plants / proliferation of weeds.
- 21) Lack of power provisions in park to support event such as market stalls.
- 22) Park furniture is dated and in average condition. Existing retaining wall in poor condition

BAIN PARK MASTER PLAN (DRAFT)
SITE PHOTOGRAPHS

- 1) Road frontage to Bain Park upgraded to enhance street frontage and open up views into park.
- 2) Playground and bike track relocated to south of park. Surface below trees to be decomposed granite and incorporates free-form "Gaudi" inspired seating.
- 3) Removable Christmas tree with provisions for power.
- 4) Interpretive sculptures with uplighting to entrance plaza to enhance street presence and draw people into park.
- 5) Signage wall with uplighting at main entrances to park.
- 6) Pavement to front of cafe extended to accommodate outdoor service / dining.
- 7) Large trees, low understory planting and a wide paved entrance with 4m solar pole lights reinforce visual connectivity to High Street & open views into Bain Park.
- 8) Existing toilets removed once multi-purpose community facilities are constructed.
- 9) 3.5m width promenade path with 4m solar pole lights & wifi. Formal arrangement of large native trees to replace existing Centenarian trees. Power provisions incorporated to western alignment for markets.
- 10) Multi-purpose lawn for informal use and events such as markets, outdoor movie nights, Christmas carols etc.
- 11) 5m x 5m shelters with seating and BBQ's.
- 12) Multi-purpose community facilities buildings (replaces existing Rotary Youth Hall / Wauchope Arts Centre and toilet block). Integrated to eastern edge of park with strong emphasis on indoor / outdoor use of the space.
- 13) Car parking formalised, street trees and 6m solar pole lights incorporated.
- 14) Bago mound upgraded to incorporate small covered stage area and terraced seating cut into mound, forming a small amphitheatre.
- 15) Pump bicycle / scooter track.
- 16) Shaded playground / water play area - relocated to improve connectivity to school, passive surveillance and access to parking.
- 17) Buffer planting to western edge of park to incorporate species suitable for use in residential gardens and will incorporate plant identification for education purposes.
- 18) Bain Park gates relocated to southern entrance plaza.
- 19) Area to accommodate a temporary stage including power provisions for medium to larger size events.
- 20) Irrigation to planting beds and lawn areas (recycled water ready).

Stage 1 - \$680,000 for main entrances, interpretive sculptures and promenade path

Stage 2 - \$790,000 for shaded playground, pump track and sculptural seating area

Stage 3 - \$2,950,000 for community centre, demolition of old toilets, and upgrade of carparks

Stage 4 - \$720,000 for amphitheatre, covered stage and multi-purpose lawn

Stage 5 - \$390,000 for shaded water play area

Stage 6 - \$540,000 for shelters, perimeter landscaping and outdoor dining area

Stage 7 - \$530,000 for irrigation, lighting and wifi

4 Your Natural and Built Environment

What we are trying to achieve

A connected, sustainable, accessible community and environment that is protected now and into the future.

What the result will be

We will have:

- Effective management and maintenance of essential water, waste and sewer infrastructure
- A community that is prepared for natural events and climate change
- Sustainable and environmentally sensitive development outcomes that consider the impact on the natural environment
- Accessible transport network for our communities
- Infrastructure provision and maintenance that meets community expectations and needs
- Well planned communities that are linked to encourage and manage growth
- Accessible and protected waterways, foreshores, beaches and bushlands
- An environment that is protected and conserved for future generations
- Renewable energy options that are understood and accessible by the community

How we will get there

- 4.1 Provide (appropriate) infrastructure and services including water cycle management, waste management, and sewer management
- 4.2 Aim to minimise the impact of natural events and climate change, for example, floods, bushfires and coastal erosion
- 4.3 Facilitate development that is compatible with the natural and built environment
- 4.4 Plan for integrated transport systems that help people get around and link our communities
- 4.5 Plan for integrated and connected communities across the Port Macquarie-Hastings area
- 4.6 Restore and protect natural areas
- 4.7 Provide leadership in the development of renewable energy opportunities
- 4.8 Increase awareness of issues affecting our environment, including the preservation of flora and fauna

AGENDA
COMMITTEECOAST, ESTUARY & FLOODPLAIN ADVISORY SUB-
28/05/2020

Item: 07Subject: NORTH BROTHER LOCAL CATCHMENTS FLOOD STUDY - DRAFT
OPTIONS ASSESSMENT REPORTPresented by: Development and Environment, Melissa Watkins

RECOMMENDATION

That the Committee:

1. Endorse the North Brother Local Catchments Flood Study - Draft Options Assessment Report.
2. Recommend that the North Brother Local Catchments Flood Study - Draft Options Assessment Report be placed on public exhibition for a minimum of 28 days.
3. Request Committee feedback on the North Brother Local Catchments Flood Study - Draft Options Assessment Report.

Discussion

At the January 2020 Coast, Estuary and Floodplain Advisory Committee meeting, the *North Brother Local Catchments Flood Study Working Draft Options Report* was presented for consideration and endorsement by the Sub-Committee prior to proceeding to planned community consultation.

At that time, the Committee resolved to defer a review of the report and its contents until a further Committee meeting was held. This meeting was held on 20 February 2020, with the Committee recommendations as follows:

CONSENSUS:

That the Committee:

1. Endorse the North Brother Local Catchments Flood Study Working Draft Options Report.
2. Recommend that those options assessed as high priority plus the Tunis Street options (Option 6), as defined in table 3-5 of the Working Draft Options Report, be shortlisted for further detailed assessment and modelling by Jacobs.
3. That a Sub-Committee meeting be held upon receipt of the detailed modelling required under item 2.

At the 20 February 2020 Committee meeting, the options outlined in the Working Draft Options Report were discussed and the high priority options outlined in Table 3-5 of that report were recommended for further testing, including testing of options associated with Tunis Street.

Council coordinated with Jacobs regarding the configuration of options for further detailed assessment in accordance with that recommendation.

The high priority and Tunis Street options have now been modelled by Jacobs.

Item 07

Page 22

**AGENDA
COMMITTEE****COAST, ESTUARY & FLOODPLAIN ADVISORY SUB-
28/05/2020**

The revised report (**attachment 1**), includes the outcomes of the detailed modelling of structural management options as previously requested by Council and the Committee, along with numerous non-structural measures.

In particular, the attached report details the hydraulic benefits, constraints and approximate costs of each of the modelled options as a first stage in assessing their feasibility for inclusion in a future Floodplain Risk Management Plan.

Prior to formal adoption of these (or any other alternate options), community consultation is required to be undertaken to ensure that the assessed high priority outcomes align with community expectations.

Following consultation and review of the options, refined modelling will be undertaken. Preparation of detailed costings, assessment of social and environmental impacts of those options and the completion of a Multi Criteria Analysis and ultimately a Cost Benefit Analysis to assess the overall feasibility of the proposals will be undertaken.

Similarly, to the above, the updated version of the Options Report includes a number of consultant recommendations regarding non-structural measures for consideration as part of the development of the Floodplain Risk Management Study.

Key non-structural measures listed for consideration in the report include the following:

- Voluntary purchase of High Hazard Properties
- Update Council's LEP 2011 to include The North Brother Local Catchments Flood Mapping
- Section 10.7 Certificates to include notation regarding flood hazard identified by the Flood Study phase of this project
- Update the Council's Flood Policy to both refer to the North Brother Local Catchments Flood Study and to update the policy to include provisions relating to overland flooding
- Implementation of flood depth signage within the catchment
- Development of a flood education program for the catchment
- Consultation with high flood risk facilities and occupants of dwellings subject to high flood hazard regarding management of flood risk on the site

Community Engagement and Internal Consultation

Discussions at the January 2020 Committee meeting included Council's proposed community engagement strategy for the proposed upcoming public exhibition and review period.

In particular, the Committee sought information regarding Council's proposed approach in order to ensure that all affected/interested residents and landowners were informed and given the best opportunity to contribute.

In this regard and given the current restrictions around COVID-19 and public gatherings, a traditional community meeting/drop in session approach to consultation may not be appropriate at this point in time. Instead, Council staff are continuing to monitor the current situation and are investigating opportunities to undertake consultation utilising the following:

Item 07

Page 23

AGENDA
COMMITTEECOAST, ESTUARY & FLOODPLAIN ADVISORY SUB-
28/05/2020

- Targeted mail out to community members who have been previously involved in the project and those landowners/residents of properties impacted by modelled flood flows.
- Mail out to local chamber of commerce, Aboriginal Land Council and relevant state emergency agencies.
- Advertising of the exhibition period via notices, including via Council's social media channels.
- Updated project website and survey. Website to invite users to contact project staff directly to arrange a skype meeting (or similar) to review and discuss the options report.
- Attending various targeted site meetings/discussions with individual residents/landowners on a sub-catchment/neighbourhood basis.

Internal consultation has been undertaken throughout the project. DPIE have also been consulted on the Working Draft Options Report. Further consultation will be held prior to community consultation occurring.

Council intends to place the *North Brother Local Catchments Flood Study - Draft Options Assessment Report* on public exhibition for the community to have its say. A detailed community consultation strategy is yet to be developed, however will be prepared prior to exhibition of the report and having regard to Committee input.

Draft Options Assessment Report

JACOBS

Foreword

The primary objective of the New South Wales Government's Flood Prone Land Policy is to reduce the impact of flooding and flood liability on individual owners and occupiers of flood prone property, and to reduce private and public losses resulting from floods, utilising ecologically positive methods, wherever possible. Under the Policy, the management of flood prone land remains the responsibility of local government.

The policy provides for a floodplain management system comprising the following five sequential stages:

- 1. Data Collection** Involves compilation of existing data and collection of additional data
- 2. Flood Study** Determines the nature and extent of the flood problem
- 3. Floodplain Risk Management Study** Evaluates management options in consideration of social, ecological and economic factors relating to flood risk with respect to both existing and future development
- 4. Floodplain Risk Management Plan** Involves formal adoption by Council of a plan of management for the floodplain
- 5. Implementation of the Plan** Implementation of flood, response and property modification measures (including mitigation works, planning controls, flood warnings, flood preparedness, environmental rehabilitation, ongoing data collection and monitoring by Council)

Port Macquarie Hastings Council is undertaking this study for the North Brother Local Catchments study area to investigate the existing and future flood risks in accordance with the NSW Government's *Floodplain Development Manual*. The study identifies and assesses potential flood mitigation options and guides land use planning and future development on the floodplain in the study area.

This study represents stages 1 to 4 of the management process and has been prepared for Council by Jacobs. This report is a progress report documenting the draft options assessment of the floodplain risk management stage of the study.

Draft Options Assessment Report**Important note about this report**

The sole purpose of this report and the associated services performed by Jacobs is to undertake a flood study for the North Brother Local Catchments study area located in New South Wales in accordance with the scope of services set out in the contract between Jacobs and Port Macquarie Hastings Council (the Client). That scope of services, as described in this report, was developed with the Client.

In preparing this report, Jacobs has relied upon, and presumed accurate, any information (or confirmation of the absence thereof) provided by the Client and/or from other sources. Except as otherwise stated in the report, Jacobs has not attempted to verify the accuracy or completeness of any such information. If the information is subsequently determined to be false, inaccurate or incomplete then it is possible that our observations and conclusions as expressed in this report may change.

Jacobs derived the data in this report from information sourced from the Client, third parties, and/or available in the public domain at the time or times outlined in this report. The passage of time, manifestation of latent conditions or impacts of future events may require further examination of the project and subsequent data analysis, and re-evaluation of the data, findings, observations and conclusions expressed in this report. Jacobs has prepared this report in accordance with the usual care and thoroughness of the consulting profession, for the sole purpose described above and by reference to applicable standards, guidelines, procedures and practices at the date of issue of this report. For the reasons outlined above, however, no other warranty or guarantee, whether expressed or implied, is made as to the data, observations and findings expressed in this report, to the extent permitted by law.

This report should be read in full and no excerpts are to be taken as representative of the findings. No responsibility is accepted by Jacobs for use of any part of this report in any other context.

Topographic data used in this study included that sourced from a LiDAR survey and ground survey which were undertaken by third parties. Undertaking independent checks on the accuracy of the data was outside Jacobs's scope of work for this study.

This report has been prepared on behalf of, and for the exclusive use of, Jacobs's Client, and is subject to, and issued in accordance with, the provisions of the contract between Jacobs and the Client. Jacobs accepts no liability or responsibility whatsoever for, or in respect of, any use of, or reliance upon, this report by any third party.

Draft Options Assessment Report

1. Introduction

1.1 General

This report discusses the hydraulic assessment results of the draft flood mitigation options for the North Brother local catchments study area for consideration by Port Macquarie Hastings Council and the floodplain advisory sub-committee ("committee"). The options presented in this report were short-listed by Council and the committee from a long-list of options for 16 flooding locations and aim to alleviate flooding at identified flooding trouble spots particularly where properties are at risk to flooding of elevated hazard. The results will assist with further refinement of the options and facilitate consultation with stakeholders and landowners affected by implementation of the options.

This report also investigates non-structural options for managing the flood risk, including property modification and response modification measures.

The content of this report will be included in the subsequent Options Evaluation Report and Draft Floodplain Risk Management Study (FRMS) reports.

1.2 Consultation

The findings in this report are to be discussed with Council, the committee and stakeholders and landowners as a part of the options development process. Public exhibition of this report is also proposed to enable early feedback on the proposed options.

Community consultation is also scheduled to occur on a finalised list of the options during public exhibition.

1.3 Floodplain Risk Management

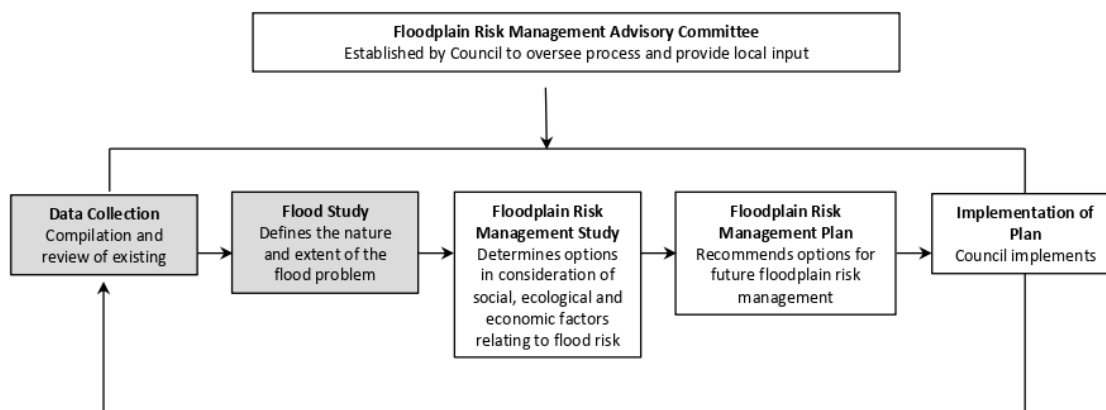

Council is responsible for managing the existing, continuing and future flood risk for its Local Government Area (LGA). The floodplain risk management planning process, as set out in the *Floodplain Development Manual* (NSW Government, 2005) has a number of steps which are illustrated in Figure 1-1. The current Flood Study phase of this study defines the flooding problem. Once the Flood Study has been endorsed by Council, the study moves to the Floodplain Risk Management Study and Plan phase, which seeks to identify and prioritise feasible options for mitigating the flood risk.

The Floodplain Risk Management Advisory Committee for Council was established in 2018 and includes a number of Council Representatives, staff from the Department of Planning Industry and Environment (DPIE, formerly Office of Environment and Heritage), the State Emergency Services (SES), in addition to local stakeholders including community representatives.

Draft Options Assessment Report

JACOBS

Figure 1-1 Floodplain Risk Management Process

**1.4 Structure of this Report**

This report is structured by the following sections:

- Section 2 provides background on the existing flood behaviour and flooding problems.
- Section 3 describes the general types of floodplain risk management measures in addition to providing a detailed assessment of the selected structural mitigation options.
- Section 4 provides an appraisal of non-structural flood risk management measures.
- Section 5 provides conclusions and recommendations based on the assessments made in this report.

2. The Existing Flooding Problem

2.1 Description of Flooding Conditions

2.1.1 Flood behaviour

Flooding behaviour was defined based on numerical modelling of hydrology and hydraulics, estimating catchment flood flows and the flooding patterns and behaviour. Modelling was undertaken in DRAINS software (hydrology) and TUFLOW software (hydraulics), as documented in the North Brother Local Catchments Flood Study – Final Flood Study Report (Jacobs, 2020). Flood depth mapping based on the modelling results is presented in Appendix A.

Overland flooding in the steeper parts of the study area, generally upstream of Ocean Drive and Bold Street, is typically a result of runoff from North Brother Mountain concentrating in natural gullies which discharge towards receiving waterways including Queens Lake, Stingray Creek, Camden Haven River and Watsons Taylor Lake. Issues arise when the gullies and flows encounter existing development, which in some instances at the larger gullies have considered the drainage conditions and provided substantial set-back from the gullies such that there is minimal interaction between floodwaters and development.

At most of the smaller gullies and flow paths, attempts have been made to manage the overland flows by use of diversion drains and underground drainage. The natural flow paths have mainly been filled in for development although shallow flow paths may have been retained. The diversion drains and drainage network have limited capacity so begin to surcharge and overflow in relatively frequent flooding events, causing flooding through properties and into buildings with substantial damage. In a number of locations the existing roads form the main flow path for floodwaters.

Most of the overland flow paths cross Ocean Drive and Bold Street, which traverse the foot of the Mountain. The cross drainage culverts are also limited in capacity and prone to blockage by flood debris including rocks and vegetation, causing overflows over the road. These are two main roads in the study area and traffic is significantly impeded or roads become cut-off during floods. The roads are raised which results in ponding upstream of the road crossings.

The areas downstream of Ocean Drive and Bold Street are mainly low-lying and relatively flat. Development patterns have resulted in a number of low points being formed in roads and through properties, causing overland flows to pond to significant depths. In some areas attempts have been made to provide a continuous overland flow path to the receiving waterways, however, their capacity is also limited which causes hazardous flooding through roads and on properties. Underground and open channel drainage systems are present but are often exceeded. Drainage in these low-lying areas may also be impeded by high water levels in the receiving waters due to floods or storm surge, and mainstream flooding may also affect these areas. These issues are expected to worsen with climate change and sea level rise.

2.1.2 Flood Depth

Overland flow depths on properties are typically up to 0.3m in up to the 1% AEP event. Depths exceed 0.5m in a number of locations in the 0.2EY event, and exceed 1m in the 5% and 1% AEP events. Areas of deeper flows include main flow paths and drainage low points in a number of roads.

During the PMF event, property and road flooding exceeding 0.5m depth is widespread, with property and road flooding of 1m depth also common. Depths of flooding exceeding 2m occur on approximately 20 properties in the study area.

The flood depth mapping shows relatively high depths of ponding on the upstream sides of many buildings. In most cases this is due to the model terrain not allowing free drainage of water around the buildings. In real life the ground surface around buildings is usually graded to allow water to drain off and not form trapped points. There may also be property stormwater drainage present which is not included in the model. Some care therefore needs to be taken in the review of the flood depth mapping.

Draft Options Assessment Report

2.1.3 Duration of Flooding

Overland flooding in the study area is generally a result of intense short-duration rainfall events. As a result, the duration of inundation of roads and built areas is typically short, limited to 1 – 2 hours in up to the 0.5% AEP event. Storage areas such as road sag points in Sirius Drive and Lilli Pilli Close in Lakewood may be inundated for longer durations of up to 3hrs due to constrained capacity of stormwater drainage servicing these areas.

Durations of inundation are likely to be up to 4 hours in the PMF event particularly in some flood storage locations, affecting roads including Botanic Drive and Ocean Drive west of Lakewood shopping centre.

Note that the duration of flooding for depths greater than 0.3m, at which stage floodwaters become impassable for most passenger vehicles, is generally limited to approximately 1 hour duration in most roads.

A river flooding event may occur shortly after overland flooding in the study area, in which case the lower-lying areas of the study area may experience more extensive durations of flooding. River flooding was not assessed in this study.

Flood hazard mapping was prepared for the 1% AEP event for current climate conditions and for the 1% AEP event under the adopted climate change scenario (increased rainfall intensity by 10% and with 0.9m sea level rise). Recent research has been undertaken into the hazard that flooding poses and the vulnerability of the public and assets when interacting with floodwaters. A combined flood hazard classification is presented in *Australian Disaster Resilience Handbook 7. Managing the Floodplain: A Guide to Best Practice in Flood Risk Management in Australia* (AIDR, 2017a) and *Guideline 7-3 Flood Hazard* (AIDR, 2017b) based on this research, and is illustrated in Figure 2-1. The flood hazard categories according to the AIDR definition are:

- H1 – Generally safe for people, vehicles and buildings;
- H2 – Unsafe for small vehicles;
- H3 - Unsafe for vehicles, children and the elderly;
- H4 - Unsafe for people and vehicles;
- H5 - Unsafe for people and vehicles. Buildings require special engineering design and construction; and
- H6 – Unsafe for people or vehicles. All buildings types considered vulnerable to failure.

The flood hazard classification is more discrete and provides guidance on flood hazard thresholds to different members of the community (e.g. children and elderly) and different assets (small versus larger vehicles, standard versus specialised engineered buildings). The AIDR flood hazard definition potentially provides a more suitable guideline for assessing flood hazard on the floodplain from an emergency management perspective.

The flood hazard mapping is provided in Appendix A and is denoted provisional. The provisional mapping is based on direct flood modelling outputs and was not updated to reflect the “true” flood hazard to take into consideration evacuation, isolation and other emergency management aspects. There are numerous areas of high flood hazard (>H5) typically reflect the swift overland flows in watercourses and flow paths including roadways.

Draft Options Assessment Report

JACOBS®

Figure 2-1 General flood hazard vulnerability curves, Australian Institute for Disaster Resilience (AIDR) definition. Reproduced from Figure 6 in *Guideline 7-3: Flood Hazard* (AIDR, 2017b)

2.1.4 Provisional Hydraulic Categories Mapping

Three flood hydraulic categories identified in the *Floodplain Development Manual* (NSW Government, 2005). These are also defined in Council's Flood Policy (2015):

- Floodway, where significant discharge of water occurs during floods and blockage could cause redirection of flows. Generally characterised by relatively high flow rates; depths and velocities;
- Flood storage, characterised by relatively deep areas of floodwater and low flow velocities. Floodplain filling of these areas can cause adverse impacts to flood levels in adjacent areas; and
- Flood fringe, areas of the floodplain characterised by shallow flows at low velocity.

There is no firm guidance on hydraulic parameter values for defining these hydraulic categories, and appropriate parameter values may differ from catchment to catchment. For example, the minimum threshold flows and depths which might define a floodway in an overland flow catchment may be markedly lower than those for a large lowland river due to the different scale of flooding. The category definition adopted in the Hastings River Flood Study (PBP, 2006) and Hastings River Floodplain Risk Management Study (Worley Parsons, 2012) was initially considered for this study. For the Hastings River the floodways were defined as areas in the 1% AEP flood with flows greater than 2m, velocities greater than 0.5m/s and velocity x depth greater than 1m²/s. This does not agree with the flooding conditions in the North Brother study area, where 1% AEP flows are generally less than 1.5m deep. Hence, an alternative hydraulic category system is required.

Howells et. al. (2003) suggest that consideration of flow depths, velocities and velocity x depth of flood flows can be used to help define the hydraulic category areas. Various combinations of flow, depth and velocity were trialled for appropriate threshold values for the hydraulic categories. For the purposes of this study, the hydraulic categories were defined as per the criteria in Table 2-1, which were selected following trials of different criteria values and categorisation methods. These criteria are consistent with those adopted by a number of other councils in NSW for overland flooding.

Draft Options Assessment Report

Table 2-1 Hydraulic Categories Criteria

Hydraulic Category	Criteria
Floodway	Area within the flood extent where: <ul style="list-style-type: none"> • Velocity x Depth > 0.3m²/s AND • Velocity > 0.5m/s AND • Depth > 0.15m.
Flood Storage	Remaining area within 1% AEP flood extent where Depth > 0.15m
Flood Fringe	Remaining area in the floodplain (i.e. area within PMF extent) outside the Floodway and Flood Storage areas.

The provisional hydraulic categories mapping is presented in Appendix A for both the 1% AEP design flood for current climate, and for the 1% AEP event with climate change. The mapping is treated as provisional and may need to be considered in further detail to ensure a continuous floodway strip (where appropriate) and to remove/reclassify isolated areas which currently meet the floodway criteria to either flood storage or flood fringe categories. This would be achieved by manual inspection and adjustment of the mapped floodway areas.

Floodway areas are generally located within the natural watercourses and flow paths, although there are a number of roads which contain floodways throughout the study area. Floodways pass through properties on Black Swan Terrace, Koonwarra Street, Pelican Court, Elouera Place, Flinders Drive, St Joseph's School, Peach Grove, Gow Place, Kew Road and in Laurieton between Quarry Place and Bold Street, among others.

2.2 Summary of Flood Problem Areas

Flooding hot spots are identified in the flood study, confirming problem areas previously identified by Council. The hot spots are summarised in Table 2-2 below. Critical areas with consideration of high flood depths, velocities or hazard are highlighted with orange cell or text shading. In summary, the identified critical locations include:

- Black Swan Terrace, West Haven.
- Kimington Terrace, Koonwarra Street, Captain Cook Bicentennial Drive villas and Ocean Street property and Pelican Court, West Haven.
- Bold Street, Laurieton
 - Laurieton Hotel and adjoining areas
 - Harbourside Crescent villas.
- Lake Street property, Laurieton. Corner Seymour Street.
- St Joseph's School, Laurieton.
- Lilli Pilli Close, Lakewood (road flooding).
- Sirius Drive, Honeysuckle Avenue and Mahogany Close, Lakewood (road flooding).
- Ocean Drive between Fairwinds Avenue and Mission Terrace (road flooding).
- Pelican Court, West Haven (road flooding).
- Waterview Crescent, Kimington Terrace and Koonwarra Drive, West Haven (road flooding).
- Bold Street between Laurie Street and Mill Street (road flooding).
- Lord Street at Seymour Street, Laurieton (road flooding).

Draft Options Assessment Report

Table 2-2 Description of Flooding Hot Spots

Location	Description
Property flooding	
Black Swan Terrace, West Haven	Flow depths on properties up to 0.5m in the 0.2EY event and up to 0.7m in the 1% AEP event. Swift flows of 2m/s. Flood hazard up to H5 rating in the 1% AEP event.
Ringtail Cl, Lakewood	Overflows from open channel onto properties with flooding in backyards to depths 0.2 – 0.3m in the 1% AEP event. Relatively low flooding impact.
Lilli Pilli Cl, Lakewood	Flooding in backyards to depths of 0.3 – 0.5m in the 1% AEP event from open drain overflows. Flooding in cul-de-sac to depths up to 0.8m. Also significant flooding of car park around Lakewood shopping centre.
Mission Terrace, Lakewood	Overflows with depths of 0.1 – 0.3m in the 1% AEP event from cul-de-sac onto downhill property. Overflows from the overland flow path running through properties on the uphill side of the road with depths up to 0.2m
Kirmington Terrace to Pelican Court, West Haven	Flows through properties on low side of Koonwarra Street of 0.3m in the 0.2EY event and exceeding 0.5m in the 1% AEP event. Velocities up to 2m/s in the 1% AEP event. Flood hazard up to H4 (some localised H5) rating in the 1% AEP event. Flow depths 0.5m in the 0.2EY event and up to 0.8m in the 1% AEP event on Captain Cook Bicentennial Drive villas and Ocean Drive property, at dwellings. Flood hazard up to H4 rating in the 1% AEP event. Flood depths of 0.6 – 0.8m in the 0.2EY event within Pelican Court roadway and pedestrian walkway. Depths up to 0.6m at dwellings in 1% AEP event. Flood hazard up to H4 rating on properties and H5 on roadway in the 1% AEP event. Groundwater springs occur in this area but are not directly related to the surface water flood risk. These springs appear to be a spatially random occurrence.
Flinders Dr Estate, Laurieton	Overflows from drainage easement swale onto properties with depths to 0.3m in the 0.2EY event and 0.5m in the 1% AEP event. Overflows from Reliance Crescent sag point onto properties to depths of 0.2m in the 0.2EY event and 0.4m in the 1% AEP event.
Bold Street area, Laurieton	Significant flows through Laurieton Hotel with H4 hazard rating. Trapped drainage point on western side of commercial properties with significant depths, though local drainage may be present which would mitigate the flood depths. Overflows down fire trail at Norman Street/ Mill Street affecting properties with depths up to 0.3m in the 1% AEP. Overflows onto units on Harbourside Crescent from trunk drainage channel to depths exceeding 0.5m in the 1% AEP event, with H5 hazard rating.

Draft Options Assessment Report

Quarry Way, Laurieton	Overflows from flow diversion drain to depths of 0.5m in the 1% AEP event on properties. The drain is reported to be affected by significant debris blockage.
Lake Street, Laurieton	Flood depths up to 1m in the 1% AEP event affecting dwelling on the corner of Lake Street and Seymour Street. Overflows from Lake Street onto properties between Ocean Drive and Castle Street to depths of 0.3m in the 1% AEP.
St Joseph's School, Laurieton.	Swift flows in overland flow paths to depths of 0.8m and velocities exceeding 2m/s in the 1% AEP event. Flows between buildings are 0.4m in the 0.2EY event and 0.6m in the 1% AEP event, with velocities up to 2m/s. Flood hazard rating of H4 in pedestrian walkways and H5 in overland flow paths in the 1% AEP event.
Properties adjacent to Stingray Creek and Camden Haven River, Laurieton	Numerous properties on low-lying land at risk of oceanic inundation during storm surge events. Estimated depths on the flood mapping expected to be conservative due to likely attenuation of ocean inflows through the river mouth.
Blackbutt Crescent and Peach Grove, Laurieton	Overflows from flow diversion drain to depths of 0.5m in the 1% AEP event on properties. The drain cross-sectional profile and capacity significantly reduces near its discharge point onto Peach Grove at Tunis Street. Flows into the drain originate from natural watercourse further uphill, which is significantly affected by rubble and debris blockage.
Elouera Place, West Haven	Overflows from watercourse and diversion drain. Depths over 0.3m in the 0.2EY event and 0.5m in the 1% AEP event.
Sirius Drive, Honeysuckle Avenue and Mahogany Close, Lakewood	Flood depths on properties 0.3 – 0.5m in the 1% AEP event, built up from road ponding areas.
Sirius Drive and Oak Close, Lakewood	Depths 0.3 – 0.4m and velocities 1m/s in the 1% AEP event.
Sandpiper Close	Overflows from concrete channel along Ocean Drive. Depths 0.3 – 0.4m and velocities 1m/s in the 1% AEP event.
Properties on lower side of Ocean Drive, 200m east of Hoschke Road, West Haven	Road low point overflows onto properties with depths of 0.5m and velocities of 1m/s in the 1% AEP event.
Roads	
Ocean Drive west of Lakewood shopping centre	5% AEP event flood depths of 0.4m 1% AEP event flood depths of 0.5m, H3 hazard rating
Botanic Drive, Lakewood	1% AEP event flood depths of 0.4m, H2 hazard rating
Lilli Pilli Close, Lakewood	5% AEP event flood depths of 0.6m 1% AEP event flood depths of 0.7m, H3 hazard rating
Ocean Drive east of Lakewood shopping centre	5% AEP event flood depths of 0.3m 1% AEP event flood depths of 0.35m, >H4 hazard rating
Sirius Drive, Honeysuckle Avenue and Mahogany Close, Lakewood	0.2EY event flood depths of 0.6 – 0.7m 1% AEP flood depths 1m, H3 hazard rating
Ocean Drive between Fairwinds Avenue and Mission Terrace	0.2EY event flood depths of 0.5m 1% AEP event flood depths of 0.7m, >H4 hazard rating
Ocean Drive and Mission Terrace intersection	0.2EY event flood depths of 0.4m

Draft Options Assessment Report

	1% AEP event flood depths of 0.6m, H3 hazard rating
Ocean Drive near Waterview Crescent	5% AEP event flood depths of 0.2 – 0.3m 1% AEP event flood depths of 0.3m, low hazard rating but long section of flooding
Ocean Drive near Pelican Court	5% AEP event flood depths of 0.3m 1% AEP event flood depths of 0.4m, H3 hazard rating
Pelican Court, West Haven	0.2EY event flood depths 0.6m 1% AEP event flood depths of 1m, H5 hazard rating
Waterview Crescent, Kirmington Terrace and Koonwarra Drive, West Haven	0.2EY event flood depths of 0.2m with 2m/s velocity; max 0.6m depths (low velocity) 1% AEP event flood depths up to 0.7m, H5 – H6 hazard rating
Ocean Drive east of Hoshcke Road	0.2EY event flood depths of 0.4m 1% AEP event flood depths of 0.5m, H3 hazard rating
Ocean Drive east of Flinders Drive	5% AEP event flood depths of 0.3m 1% AEP event flood depths of 0.4m, H3 hazard rating
Kew Road/Bold Street near Tunis Street, Laurieton	1% AEP event flood depths of 0.5m, H2 hazard rating
Bold Street between Laurie Street and Mill Street	0.2EY event flood depths over 0.5m 1% AEP event flood depths 0.6 – 0.8m, H5 hazard rating
Bold Street north of Hanley Street, Laurieton	0.2EY event flood depths of 0.3m with 1m/s velocity 1% AEP event flood depths up to 0.5m, H3 hazard rating
Lord Street at Seymour Street, Laurieton	0.2EY event flood depths of 0.5m 1% AEP event flood depths up to 0.7m, H3 hazard rating
Flinders Drive, Laurieton Tunis Street, Laurieton Rosewood Court and Mission Terrace, Lakewood Diamantina Way, Lakewood	H5 hazard rating on steep sections of road (1% AEP event)

2.3 Above-Floor Property Flooding

A floor level survey was undertaken in October 2019 for selected properties in the study area, which were identified based on presence of high hazard flooding at the dwelling in the 1% AEP event. The minimum habitable floor level was surveyed at a total of approximately 270 buildings. Floor levels for the remaining 2,000 (approximately) properties in the study area were estimated based on an assumed 0.2m height above the maximum ground level at the dwelling.

Above-floor flooding in the 0.2EY, 5%, 2% and 1% AEP and PMF flood events is mapped on Figure 2-2. The buildings shown on the map were selected as those affected by main flow paths and bodies of flooding, and exclude those affected by minor ponding. This selection process was done for each flood AEP and was also used in the flood damages assessment (see Section 2.6).

Draft Options Assessment Report

Above-floor flooding is expected to incur significantly greater flood damages to the building and contents compared to yard (i.e. below floor level) flooding. The map indicates the spatial distribution of properties with above-floor flooding and their relative vulnerability, with properties affected in frequent events such as the 0.2EY event being more vulnerable than those affected only in rarer events such as the 1% AEP event.

2.4 Very High Hazard Residential Properties

A count of properties with very high hazard flooding conditions at the dwelling was undertaken based on the flood hazard mapping in Appendix A, with the review identifying 20 residential properties with a flood hazard rating of H5 or H6 in the 1% AEP event, whereby damage to the building may result due to floodwaters. The properties are located within the flood problem areas as discussed in 2.2 and may be candidates for management measures including voluntary purchase and redevelopment by Council, as discussed in Section 4.1.1 and Section 4.1.4, respectively.

2.5 Sensitive Properties and Critical Infrastructure

Sensitive properties and critical infrastructure have been identified in the catchment. Certain types of properties may require specific evacuation considerations due to the vulnerability of their occupants, such as schools and pre-schools, and aged care facilities. Critical infrastructure impacted by flooding may have effects on the recovery and functioning of the community following a flood event.

The sensitive properties and critical infrastructure are mapped on Figure 2-3. The flood hazard in the PMF event is mapped on the figure. Note that centrally-operated facilities are listed. Properties which include apartments, villa estates etc. have not been identified.

TITLE Sensitive Properties and Critical Infrastructure

PROJECT North Brother Local Catchments Flood Study

FIGURE 2-3

Draft Options Assessment Report

The sensitive properties and critical infrastructure identified as being directly affected by overland flooding are summarised in Table 2-3 with the flood hazard on each site indicated. Note that the list is based on the overland flood modelling in this study, and a number of sites are impacted by mainstream flooding which is not assessed.

Table 2-3 List of flood-affected sensitive properties and critical infrastructure

Name	Overland Flow Flood Hazard* (Existing case, no climate change)		Hydraulic Category (1% AEP, climate change)
	1% AEP	PMF	
Sensitive Properties			
Stockland Camden View Retirement Village	Mostly H1/H2 Up to H5	H6	Flood Fringe/Flood Storage/Floodway
Kids Haven Pre School	H1	H1	Flood Fringe
Laurieton Public School	H1	H4	Flood Fringe
Laurieton Retirement Village	Mostly H1 – H2 Localised H3	H6	Mostly Flood Fringe/Flood Storage. Some Floodway areas
St Josephs Primary School	Mostly H1/H2 Up to H5	H5-H6	Flood Fringe/Flood Storage/Floodway
St Josephs Early Childhood Services	Mostly H1/H2 Up to H4	H5	Flood Fringe/Flood Storage/Floodway
Stockland Queens Lake Retirement Village	Mostly H1/H2	H4	Mostly Flood Fringe. Some Flood Storage areas
Laurieton Lakeside Aged Care Residence	Mostly H1	Mostly H1- H3	Flood Fringe
Kids Haven Early Learning Centre	H1	H1	Flood Fringe
Camden Haven High School	Mostly H1	Mostly H1, up to H4 in low-lying southern part of school	Mostly Flood Fringe
Critical Facilities and Infrastructure			
NSW Ambulance Laurieton	H1	H3	Flood Fringe/Flood Storage

Laurieton sewage pumping station	H4	H6	Flood Storage/Floodway

* Note, overland flood hazard indicated. Some properties are also affected by mainstream flooding.

2.6 Flood Damages Assessment

2.6.1 Overview

Flood events may cause damage to property with significant costs to property owners and insurers. The damage may occur due to floodwaters affecting the building façade and interior (weatherboard exterior, gyprock interior walls, carpets), electrical wiring and building contents and other property outside the dwelling (vehicles,

Draft Options Assessment Report

JACOBS

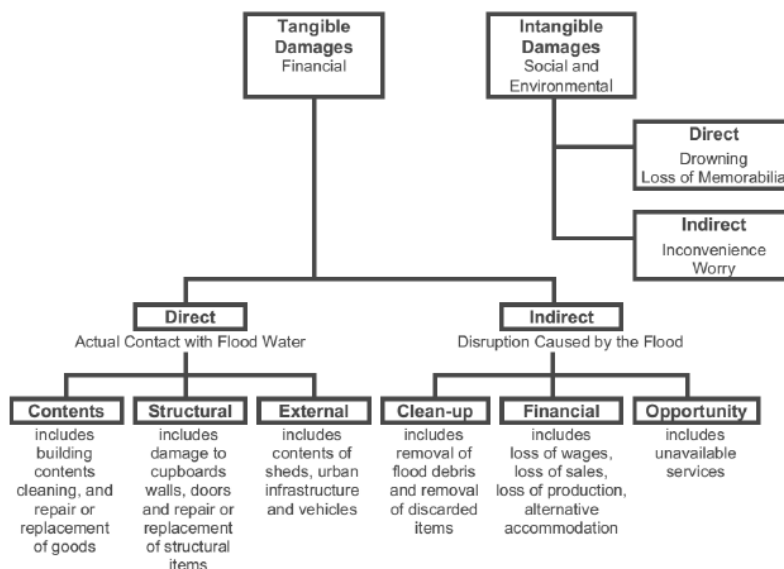

contents of sheds and garages, etc). Structural damage to the dwelling can also occur due to extreme flood hazard conditions.

The cost of flooding is estimated to identify the magnitude of the event to a community, and subsequently provide a benchmark for the viability of potential measures for mitigating the impacts of flooding. This section describes the estimation of flood damage costs in the study area, focussing on residential and commercial properties.

2.6.2 Flood Damages Categories

The type of damages associated with floods is shown in Figure 2-4 (*Floodplain Development Manual, NSW Government 2005*). The cost of damage caused by floods may include tangible and intangible components. Tangible damage costs include the direct material damage and rebuilding costs to existing homes, property and infrastructure, and also the indirect costs associated with the social disruption of the floods, such as: clean-up; lost income during and after the flood event; and the cost of alternative accommodation for people displaced by the floods. A monetary value can be readily placed on the direct damages, which are the focus of this assessment.

Figure 2-4 Types of Flood Damage

Other social and environmental damages to which a monetary value cannot readily be placed are intangible damages, which include emotional stress of the flood event, injury and loss of life. While these damages cannot readily be incorporated into an economic feasibility assessment of mitigation options, it is still important to consider the potential for these intangible damages, particularly if there is an elevated risk of loss of life.

2.6.3 Estimation of Direct Tangible Flood Damage Costs

2.6.3.1 Property Information

Residential and commercial properties were identified and characterised based on knowledge and site observations of the study area.

Residential house types in the study area are generally a mixture of one and two storey houses, in addition to a number of villa and apartment complexes. In floodplains with deep flooding (riverine floodplains) two storey

Draft Options Assessment Report

houses would experience a second increment of flood damages as floodwaters rise and affect the second storey. While some properties in the low-lying areas adjacent to the rivers and lakes would be affected by riverine flooding, the focus of this study is on overland flows from the local catchments, affecting up to the first storey of the house only. For the purposes of this assessment all houses were assumed to be single storey.

Flood damages are estimated based on flood level in relation to building floor level, with the damages increasing as the flood levels increase. The floor levels of approximately 270 buildings, selected based on high hazard flooding in the 1% AEP event, were surveyed. The floor levels of remaining buildings were estimated based on LiDAR ground levels plus and assumed 0.2m above the highest ground level at the building.

Affected buildings for the flood damages assessment were selected based on interpretation of overland flood extents from the flood mapping, to include only those properties affected by main flow paths and significant ponding shown on the mapping so as not to overestimate the flood damages. The affected properties were selected for each event assessed in the flood damages estimation, i.e. the 0.2EY, 5%, 2% and 1% AEP and PMF events. This approach was taken so as not to overestimate the flood damages.

2.6.3.2 Residential Property Damages

Residential flood damages guidelines and a calculation spreadsheet was developed by the NSW Office of Environment and Heritage (OEH, 2016b). The calculation spreadsheet includes a representative stage-damage curve derived for typical house types in the study area to estimate structural, contents and external damage. The amount of damage is based on the flood inundation depth, for a suite of annual exceedance probability events ranging from the 20% AEP event up to the PMF. These values are then summed to provide a total damage for each flood event analysed. The AEP of the PMF in the study area is assumed to be 1 in 10,000,000.

The stage-damage curves assume some flood damages for flood levels below the floor level. A minimum damage value of \$12,060 (2018 dollars) is assumed to occur at a level 0.5m below the floor level. This approach accounts for flood damages to parts of the dwelling and property below the floor level and ensures that damages are not underestimated.

Various input parameters are used to define the flooding and location characteristics which derive a location specific damage curve. The parameters adopted for the study area are presented in Table 2-4.. Unless otherwise stated, default parameters have been used (as recommended in the *Residential Flood Damage Guidelines* (OEH, 2016b)).

The DECCW stage-damage curves within the spreadsheet are derived for late 2001, and have been updated using an Average Weekly Earnings (AWE) factor to the current day values. AWE is used to update residential flood damage curves rather than the inflation rate measured by the Consumer Price Index (CPI). The most recent AWE value from the Australian Bureau of Statistics (ABS, 2019) at the time of the assessment was November 2018, however, this resulted in a multiplication factor on 2001 dollars of 2.37, which was significantly out of step from the factor value derived from November 2017 AWE of 1.76 and from previous recent years. On this basis, a factor of 1.9 was assumed for up to August 2019 to keep in trend with AWE increases for the years prior to November 2017.

Draft Options Assessment Report

Table 2-4 Input parameters for damage calculations

Parameter	Value	Comment
Regional Cost Variation Factor	1.0	Appropriate value for a major city (Sydney) and surrounds. Similar value assumed for major regional city.
Post flood inflation factor	1.15	
Typical duration of immersion	1 hour	
Building damage repair limitation Factor	0.85	Represents short duration flood (<12 hours) where some materials can recover from short periods of flooding and may not need replacement
Typical free-standing house size	240m ²	
Contents damage repair limitation Factor	0.75	Guidelines suggest a value of 0.75 for short duration floods
Effective warning time (hrs)	0	Only marginal improvement in damages cost when effective warning time is increased to 1 hour as a sensitivity assessment
Level of flood awareness	Low	Flood warning times are nil, and it is assumed that residents are typically not aware of potential damage of flood waters and the measures to minimise damages (e.g. elevated storage of goods).

2.6.3.3 Commercial Property Damages

No information on commercial property flood damage costs in NSW was found during a literature search. The most relevant information obtained was published in the Queensland Government Natural Resources and Management Department's *Guidance on the Assessment of Tangible Flood Damages* (2002). This document contains flood damage curves for commercial properties over a range of property footprint areas and degrees of susceptibility to flooding and is based on information published in *ANUFLOOD: A Field Guide* (Centre for Resource and Environmental Studies (Australian National University), 1992). Different types of commercial and non-residential properties were assigned a susceptibility rating, as illustrated in Figure 2-5.

Draft Options Assessment Report

JACOBS

Figure 2-5 Damage categories for commercial properties (reproduced from *Guidance on the Assessment of Tangible Flood Damages* (Qld. Government, 2002))

The stage-damage data were factored up by a value of 1.9 from late 2001 dollars to current values based on Average Weekly Earnings (AWE), similar to the approach adopted for the residential flood damages.

An additional multiplication factor of 1.6 was applied based on guidance in *Rapid-Appraisal Method (RAM) for Floodplain Management* (Victorian Government Natural Resources and Environment, 2000), which suggests that the ANUFLOOD values are underestimated and should be increased by 60%.

A total of 89 commercial and non-residential premises/buildings which are potentially flood-affected were identified. Detached buildings on non-residential properties were assessed individually e.g. on school grounds. Individual shops within an overall commercial building complex were also assessed separately where possible. The results of the commercial and non-residential property flood damages assessment are provided in Section 2.6.3.5.

2.6.3.4 Damages to Utilities and Infrastructure

Utilities and infrastructure in the study area which are susceptible to flooding may include roads and other public infrastructure such as sewage pumping stations, electrical transformer boxes, etc.

The potential cost of damage to roads is difficult to estimate for the study area, as the nature of flooding in a significant portion of study area is typically due to relatively shallow, short-duration flows, although road damage is possible for roads conveying higher velocity flows.

The roads damages guidance published in the references cited in this study are based on longer-duration mainstream flooding damages and hence are likely to overestimate the flood damages to roads in the study area. Hence these costs have not been included in this assessment.

Draft Options Assessment Report

2.6.3.5 Damage Assessment Results

The most convenient way to express flood damage for a range of flood events is by calculating the Annual Average Damage (AAD). The AAD is equal to the total damage caused by all floods over a long period of time divided by the number of years in that period. The AAD for the existing case then provides a benchmark by which to assess the merit of flood management options.

The AAD value is determined by multiplying the damages that can occur in a given flood by the probability of that flood actually occurring in a given year and then summing across a range of floods. This method allows smaller floods, which occur more frequently to be given a greater weighting than the rarer catastrophic floods.

Table 2-5 summarises the residential damages and the commercial and non-residential damages. The residential and commercial property flood damages include direct damages to property such as structural, external and contents damage, and indirect damages such as clean up costs and accommodation/ loss of rent costs. Infrastructure damage, vehicular damage and intangible damages are not included.

The OEH (2016b) guidelines recommend that the adopted freeboard in the flood planning level (0.5m) be considered in the flood damages estimation. This gives the "Protection Level" which reduces the floor level relative to the flood levels in the calculations which are adopted as the damages estimates. Calculations of damages based on floor level (no freeboard adjustment applied) are also provided as a sensitivity check.

The flood damages here are "potential flood damages", which may be reduced with increased flood awareness and preparedness in the community. The Net Present Value of the flood damages assumes a 7% discount rate over a 50 year life, as per the OEH (2016b) guidelines. The damages are in 2019 dollar values

Table 2-5 Estimated Tangible Flood Damages due to Overland Flooding

Event	Based on Floor Level*		Based on Protection Level (Floor Levels minus Freeboard)*	
	Number of properties flooded above floor level	Estimated Flood Damage	Number of properties flooded above protection level	Estimated Flood Damage
Residential				
20% AEP	161	\$18.9M	344	\$40.3M
5% AEP	222	\$25.6M	429	\$50.8M
2% AEP	380	\$42.7M	679	\$80.6M
1% AEP	492	\$54.1M	839	\$100.0M
PMF	1,616	\$193.9M	2,062	\$274.5M
AAD		\$8.9M		\$17.6M
Commercial/Non-Residential				
20% AEP	10	\$1.0M	34	\$4.4M
5% AEP	16	\$1.5M	44	\$6.1M
2% AEP	27	\$2.3M	59	\$8.3M
1% AEP	31	\$2.5M	63	\$8.9M
PMF	83	\$12.9M	98	\$22.7M
AAD		\$0.5M		\$1.9M

* Damages estimate based on Protection Level is to be adopted. Estimate based on floor level used as a sensitivity check.

Draft Options Assessment Report

JACOBS**2.6.4 Application of Flood Damage Curves to the Study Area**

It should be noted that the flood damages estimated for the study area need to be considered with care. The OEH residential stage-damage curves recommended for use in NSW have been developed based on flood damages from low-land mainstream/ flooding, where flood surface gradients are relatively flat and the depth of flooding within a dwelling is fairly uniform. Due to the steep terrain in parts of the study area and the generally shallow nature of overland flows (particularly in the more frequent flood events), flood levels may vary greatly on a property and damage may be concentrated on one side of a dwelling. Flood depths are also relatively shallow so the damage incurred may be less than those suggested by the curves. Nevertheless, the stage-damage curves provide the best guidance available for estimating flood damages given the scarcity of actual flood damage data to residential properties on overland flow paths and have been adopted for this study.

2.6.5 Summary

Flood damages in the study area is primarily attributed to residential dwellings that are impacted by overland flooding. The estimates based on Protection Level are adopted. The flood damages estimates were based on properties selected based on their impact from main areas of flooding, and excludes those affected by localised minor ponding. The residential AAD for the study area is \$17.6 million. The non-residential AAD is \$1.9 million.

There are 523 residential and non-residential properties that are estimated to experience above floor flooding (not protection level) for the 1% AEP event. In the PMF, 1,699 properties are estimated to experience above floor flooding.

While flood damage estimates for the study area are indicative only, they are useful in the evaluation of flood management options, aimed at reducing flood damage estimates while being economically viable to implement.

3. Floodplain Risk Management Measures

3.1 Overview

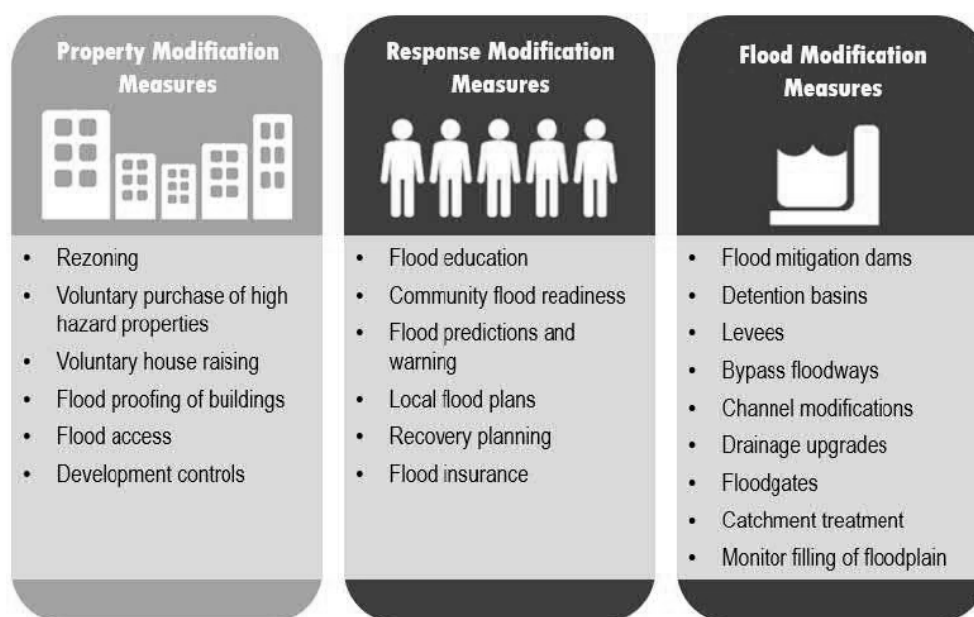

One of the objectives of this Floodplain Risk Management Study is to identify and compare various floodplain risk management options to deal with existing and future flood risk in the study area, considering and assessing their social, economic, ecological and cultural impacts and their ability to mitigate flood impacts.

The *Floodplain Development Manual* (NSW Government, 2005) describes floodplain risk management measures in three broad categories as described below:

- **Property modification** measures involve modifying existing properties (for example, house-raising) and/or imposing controls on new property and infrastructure development (for example, floor height restrictions);
- **Response modification** measures involve modifying the response of the population at risk to better cope with a flood event (for example improving community flood readiness); and
- **Flood modification** measures involve modifying the behaviour of the flood itself (for example, construction of a levee to exclude floodwaters from an area or flood retarding/detention basins to store floodwaters and reduce peak outflows).

Examples of measures falling under the three categories are outlined in Figure 3-1. Some of these measures may or may not be appropriate in a particular catchment, depending on factors such as the flooding behaviour and patterns of development.

Figure 3-1 Floodplain Risk Management Measures (Source: *Floodplain Development Manual*, 2005)

Draft Options Assessment Report

3.2 Considerations in Options Identification and Prioritisation

In determining the nature and priority of potential options for further detailed assessment, the following factors have been considered:

- The identified mitigation options are aimed at improving flooding conditions due to local catchment flooding. Riverine flood levels exceed the local catchment flood levels by a substantial amount particularly in the 1% AEP event and inundate low-lying areas of the study area. The local catchment flood mitigation options in these areas should be designed not to worsen the susceptibility of these areas to riverine flooding. For example, substantial lowering of raised berms may allow overtopping of river floodwaters in more frequent events.
- Design river tailwater conditions due to elevated ocean levels are up to 2.1m AHD in the 1% AEP event. Some low-lying areas on properties and roads have a ground level of approximately 2.6m AHD and would be difficult to drain via underground pipes.
- The effectiveness of mitigation options during future climate change scenario is to be considered. The design river tailwater conditions due to elevated ocean levels would increase to 3.0m AHD in the 1% AEP event in a climate change scenario, with 0.9m of sea level rise.
- The design riverine flood levels are 2.3 – 2.4m AHD in the 5% AEP event and 2.9 – 3.0m AHD in the 1% AEP event in the current climate. The flood levels in a climate change scenario are expected to increase by up to 0.8m in the 1% AEP event as a result of 0.9m sea level rise and 10% increase in rainfall (Patterson Britton and Partners, 2013).
- Given the low elevation of a number of identified sites for potential mitigation, it is expected that the effectiveness of the mitigation options would be reduced if local overland flooding coincided with a mainstream flood peak. Some contingency will be incorporated into the options modelling with adoption of elevated, but not peak, river tailwater levels.

3.3 Selection of Options for Detailed Assessment

A description and qualitative evaluation of identified works-based flood modification options at 16 locations was provided in the Working Draft Options Report, dated 9 December 2019. The identified options aim to mitigate flooding at the locations summarised in Table 2-2, in particular property flooding. A short-list of six combinations of options were selected by Council and the committee, and have been analysed in the TUFLOW model for hydraulic performance. The results of the modelling are described in this section.

Property and response modification measures will be addressed in the draft FRMS.

3.4 Assessed Flood Modification Measures

The short-listed options were tested in the TUFLOW model for the 0.2EY, 5%, 2% and 1% AEP events and the 1% AEP with climate change event to assess the improvements to flooding conditions. Existing underground utilities were considered in the configuration of the options based on Dial Before You Dig searches.

The assessed options are described, and their modelled performance is summarised for the 0.2EY, 5% and 1% AEP events in the following sections.

3.4.1 Black Swan Terrace, West Haven

Council commissioned, separately from this study, a design for an improved trunk drainage pipe inlet arrangement and high-flow diversion to the street. Additional works in the street including raising of the road verge and driveways are proposed. Details of the design were provided following the final flood study, hence it has not been incorporated into the design flood modelling and mapping. Since the design development of mitigation works at this location are already well-advanced, further mitigation options are not proposed in this study.

Draft Options Assessment Report

JACOBS

The pre-developed conditions at Black Swan Terrace have been retained in the mitigation case modelling. Post-development hydraulic modelling for this option is being undertaken by others on behalf of Council. Flow conditions in Koonwarra Street, downstream of the works, are not expected to be significantly changed as a result of the works, hence omission of the works from the mitigation case modelling should not affect the assessment of other mitigation options.

3.4.2 Kirmington Terrace to Pelican Court, West Haven

This area is identified as a critical flood problem area with significant flooding of properties in Koonwarra Street, Captain Cook Bicentennial Drive villas, Ocean Drive and Pelican Court. The flood hazard is high to very high (H4, some H5) on properties and on roads in the 1% AEP event. The area is highly affected in frequent events such as the 0.2EY event.

Flooding originates from three separate overland flow paths, including one from Black Swan Terrace, a second near Kirmington Terrace and a third from near Hoschke Road. Flow paths 1 and 2 converge in Koonwarra Street and then flow path 3 converges at Pelican Court. Overland flows are about 15m³/s in flow paths 1 and 2 in total in the 1% AEP event downstream of Koonwarra Street, and 20m³/s in combined flow paths 1, 2 and 3 in Pelican Court. Existing pipe flows in Pelican Court are 3m³/s in the 1% AEP event in addition to the overland flows. The existing pipes in the network run full in the 0.2EY event. Flow paths 1 and 2 affect a number of properties throughout this area.

Flow path 3 directly affects two dwellings on Ocean Drive (numbers 384 and 386) near Hoschke Road in addition to contributing to flows in Pelican Court. It includes a 2m wide drainage channel through properties on the higher side of Ocean Drive, draining to a 2.4m x 0.9m box culvert under Ocean Drive, which is the main flow constraint. The culvert conveys 3.7m³/s in the 1% AEP while another 3.7m³/s overflows over Ocean Drive. It discharges to the formed swale on the low side of the road before the flows enter Pelican Court.

Floodwaters pond in Pelican Court and flow overland via an access road in addition to through properties to discharge to Queens Lake.

3.4.2.1 Option 4A+4B+4C**Description**

The following options were assessed in combination (Options 4A+4B+4C):

- Option 4A – voluntary acquisition of one property in Koonwarra Street (number 53) which has floodway and H5 flood hazard conditions. Regrade the site to form a flow path to relieve flood conditions in the road and on adjacent properties.
- Option 4B – new additional trunk drainage line 2x 1200mm diameter pipes, intercepting flows at downstream end of channel on Captain Cook Bicentennial Drive villas, cross Ocean Drive and run under The Gateway and discharge to receiving waterway to the north of Pelican Court. This proposed pipe capacity would be approximately 5m³/s which would reduce the total overland flow in Pelican Court by about 25% in the 1% AEP event. An inlet basin/rock debris trap similar to that proposed at Black Swan Terrace may be required.
- Option 4C – voluntary acquisition of one property, 7 Pelican Court, adjacent to the access road to form a larger flow path and provide additional capacity for flows out of Pelican Court sag.

Refer to Figure 3-2 for illustration of options.

Constraints assessment

- High property prices (~\$500K each) plus demolition and disposal costs.
- Existing underground utilities in Ocean Drive and The Gateway (Telstra, Optus, NBN, power, stormwater).
- Substantial number of trees in western verge of The Gateway, require removal if running new trunk drainage in the verge.

Draft Options Assessment Report**JACOBS**

- Limited space to widen existing channel running through Captain Cook Bicentennial Drive villas and then turning at Ocean Drive. Presence of existing driveway crossing over channel into Ocean Drive property.
- Minimal space for rock debris trap at new trunk drainage inlet structure. Requires more detailed site assessment for potential rock debris loads. There are a number of informal traps upstream (e.g. road crossings) and a discontinuous flow path running off the mountain, so rock debris loads may be low.

Based on the site constraints it is assumed that the new trunk drainage line would run under the western side of The Gateway in order to minimise the number of underground services which need to be crossed and/or protected.

Draft Options Assessment Report

**Hydraulic performance**

Flood impact maps, showing the change in flood levels, are presented in Figure 3-3 to Figure 3-5 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Options 4A+4B+4C is summarised in Table 3-1.

Table 3-1 Hydraulic performance of Options 4A+4B+4C

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> Koonwarra Street – flood levels reduced by up to -0.04m at three properties adjacent to new floodway Pelican Court – flood levels reduced by -0.2 to -0.4m in roadway and alleyway. Localised reductions only on properties up to -0.1m. Reduced flood hazard from very high (H5) to mostly low (H1, H2) in Pelican Court, some moderate H3 in alleyway.
5% AEP	<ul style="list-style-type: none"> Koonwarra Street – flood levels reduced by -0.04m to -0.2m at four properties adjacent to new floodway. Pelican Court – flood levels reduced by -0.2 to -0.7m in roadway and alleyway. Reductions on properties typically to -0.1m, up to -0.4m on two properties. Reduced extent of very high flood hazard (H5) in Pelican Court.
1% AEP	<ul style="list-style-type: none"> Koonwarra Street – flood levels reduced by -0.04m to -0.4m at four properties adjacent to new floodway Minor localised increase of +0.02m on Captain Cook Bicentennial Drive villas Pelican Court – flood levels reduced by -0.2 to -0.7m in roadway and alleyway. Reductions on properties typically to -0.1m, up to -0.4m on two properties. Eliminated occurrence of high - very high flood hazard (H4-H5) at two dwellings in Koonwarra Street (one through acquisition of property). Reduced flood hazard on Ocean Drive from up to very high (H5) to low (H2). Note that road may be cut-off in other locations. Reduced extent of H3-H5 hazard in Pelican Court.
1% AEP plus climate change	Similar performance to 1% AEP, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). No reduction in performance due to sea level rise.

Summary

Options 4B and 4C appear to be effective at reducing flood levels and flood hazard (magnitude and extent) on Ocean Drive and Pelican Court including up to 20 dwellings.

Option 4A reduces the number of properties at risk to high hazard flooding and to flood damages due to the property purchase. However, the reductions in flood levels on adjacent properties is generally minor, with the more substantial reductions limited to one property. The likely high cost of this option (property purchase price plus demolition costs and earthworks) may make this option more challenging to justify purely from an economic standpoint. Notwithstanding, the removal of a household subject to high flood hazard should be considered in the subsequent multi-criteria evaluation of this option.

Draft Options Assessment Report

JACOBS**3.4.3 Tunis Street Overland Flow Path, Laurieton**

This overland flow path originates above Blackbutt Crescent and Peach Grove, where a natural gully overflows into a constructed diversion channel which skirts around properties on Blackbutt Crescent and conveys flows through an easement to Peach Grove at Tunis Street. There is an existing low capacity pipe (375mm diameter) draining the flows in the easement to the existing drainage system. Flows in excess of the overland flow path spill out onto properties on Peach Grove and contribute to flooding at the main complex at Laurieton retirement village, although flooding at this complex is exacerbated by partially-trapped drainage low points.

The main flow path splits around Gow Place and Norman Street/Tunis Street intersection, with the northern branch flowing through the Laurieton retirement village villas and exiting around Kew Road at Castle Street, and the southern branch draining to the sag point on Bold Street at Tunis Street, and then joining a separate flow path through commercial and residential properties on Bold Street to McLennan Street.

The main stormwater drainage line consists of up to 900mm diameter pipe in Tunis Street, draining to the river.

Peak overland flows in these flow paths are summarised in Table 3-2.

Table 3-2 Peak flood flows at Tunis Street overland flow path

Location	Event AEP		
	0.2EY	5% AEP	1% AEP
Upstream of Peach Grove	5.2	9.4	14.1
Tunis Street at Peach Grove	3.5	6.2	9.2
Gow Street branch	1.8	3.2	5.0
Tunis Street and natural gully at Lord Street	2.1	4.1	7.1

3.4.3.1 Option 6A**Description of Options**

Option 6A was assessed individually:

- Option 6A – construct/raise a 160m long berm, up to 1m high above existing ground levels, between the natural flow path and the diversion channel above Blackbutt Crescent to reduce overflows into the diversion channel and hence reduce flows through the properties downstream. However, this option is expected to increase the flows being directed toward St Josephs School.

Refer to Figure 3-6 for illustration of Option 6A. The figure also describes Options 6B to 6E, refer to Section 3.4.3.2 for details.

Draft Options Assessment Report

JACOBS**Constraints assessment**

- Option 6A would need to be constructed within the national park area, likely requiring removal of a large number of trees for the proposed bund in addition to site access for construction plants.
- The option would be constructed on a natural berm which appears to be formed from flood-flow deposits of rock rubble and other material. Geotechnical conditions may be challenging.
- Periodic maintenance of the proposed bund would be required.

Hydraulic performance

Flood impact maps, showing the change in flood levels, are presented in Figure 3-7 to Figure 3-9 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Option 6A is summarised in Table 3-3.

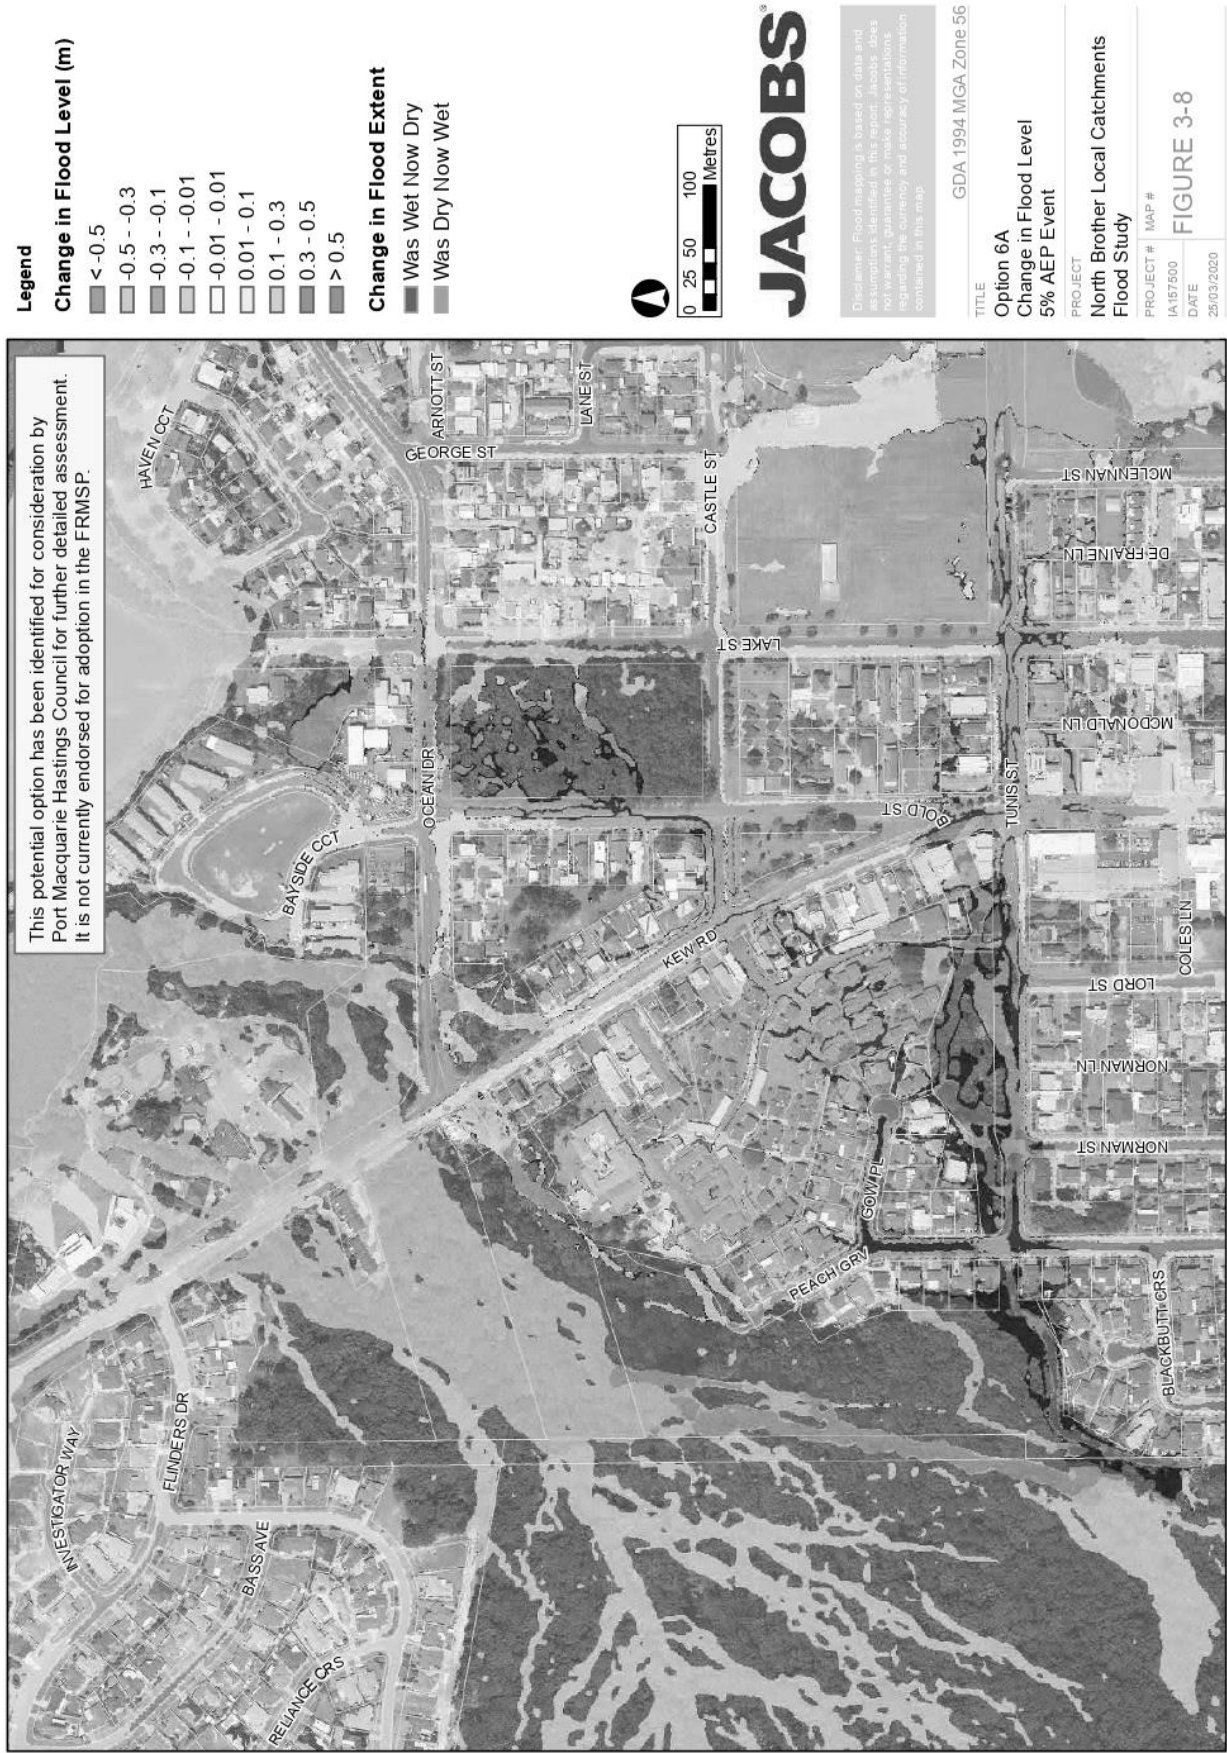

Table 3-3 Hydraulic performance of Options 6A

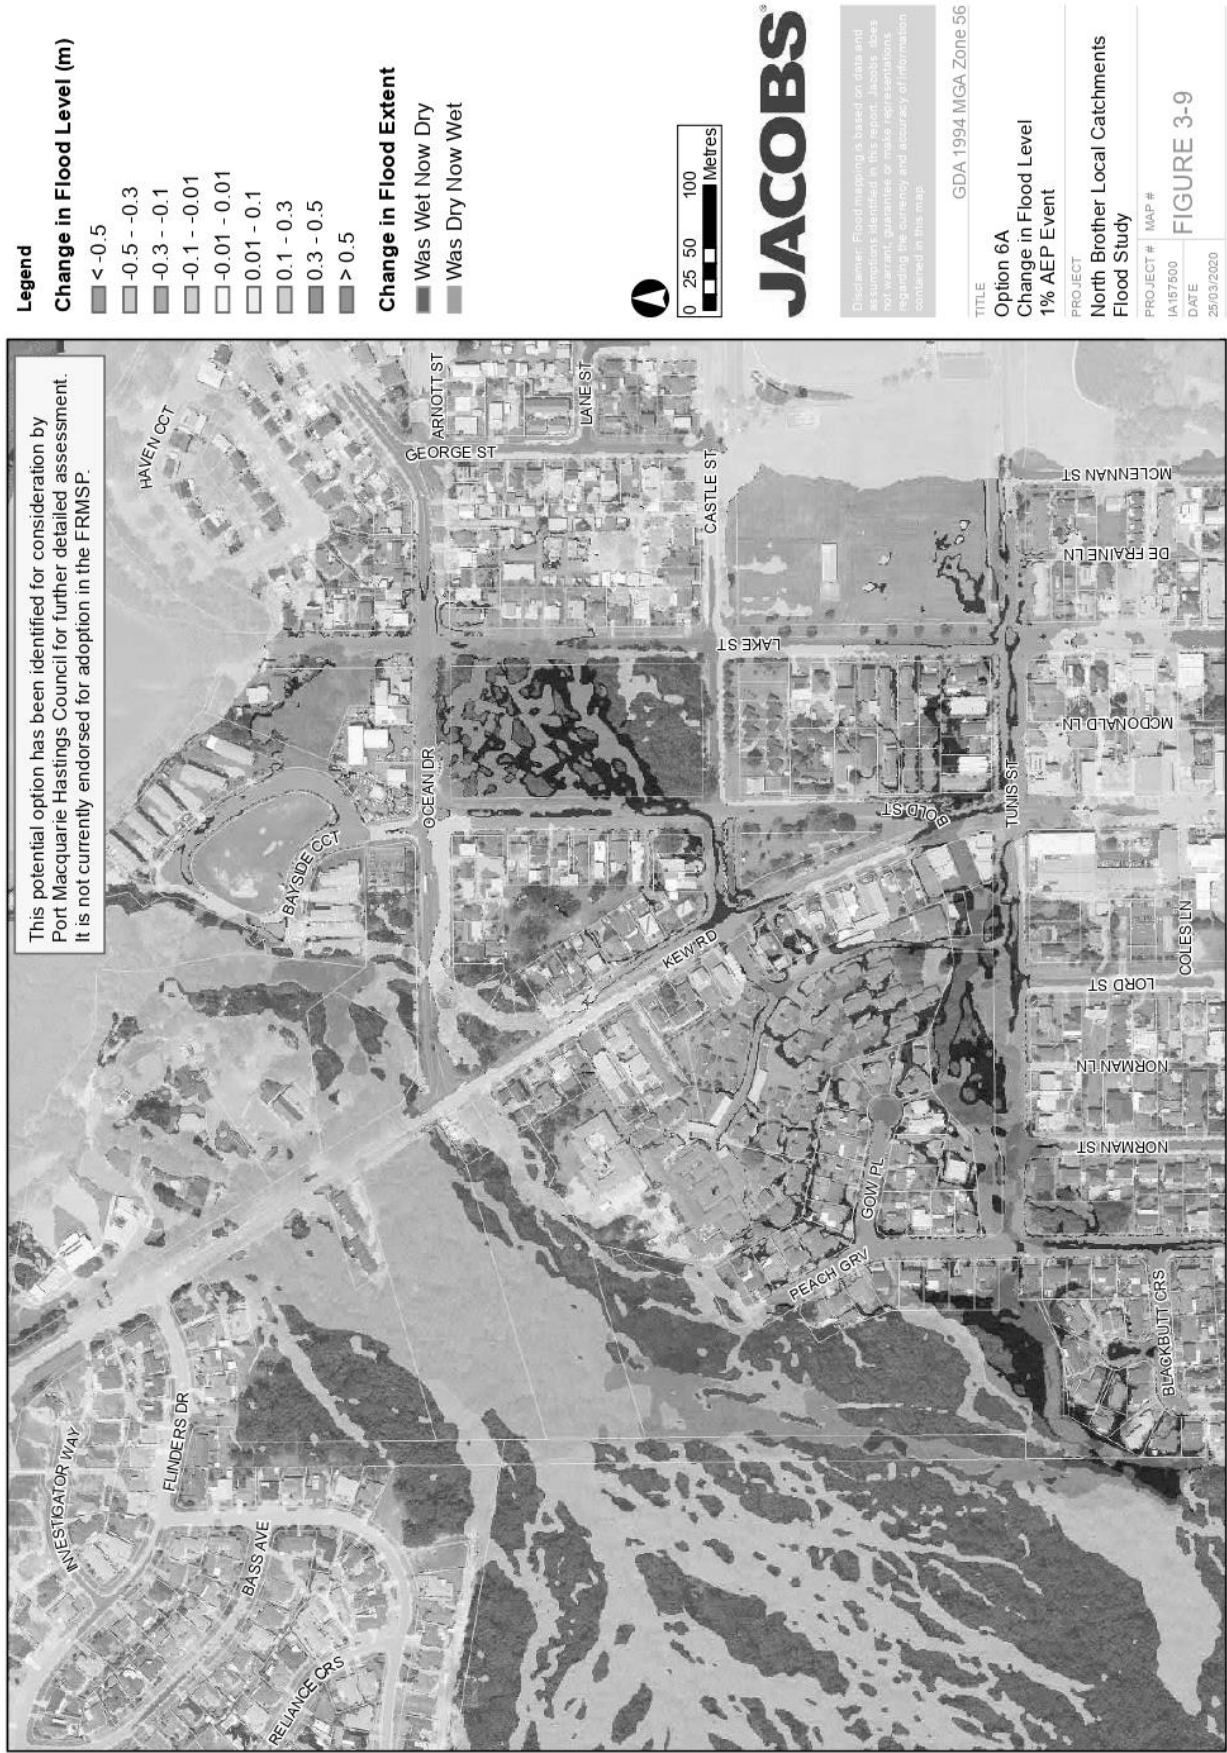

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> • Reductions in flood levels of -0.05 to -0.1m on Gow Place properties and Laurieton retirement village villas. • Localised reductions of up to -0.4m on Peach Grove properties. • Minor reductions of up to -0.05m on residential and commercial properties on and to the east of Ocean Drive. • Widespread minor increases of +0.02m on St Josephs School grounds.
5% AEP	<ul style="list-style-type: none"> • Reductions in flood levels of -0.05 to -0.2m on Gow Place properties and Laurieton retirement village villas, some localised areas greater than -0.02m. Reductions of -0.03m at Laurieton retirement village main facility. • Localised reductions of up to -0.4m on Peach Grove properties. One property experiences minor increases of less than +0.02m. • Minor reductions of up to -0.06m on residential and commercial properties on and to the east of Ocean Drive. • Widespread increases of +0.03 to +0.07m on St Josephs School grounds.
1% AEP	<ul style="list-style-type: none"> • Reductions in flood levels of -0.05 to -0.2m on Gow Place properties and Laurieton retirement village villas, some localised areas greater than -0.02m. Reductions of -0.1m at Laurieton retirement village main facility. • Localised reductions of up to -0.4m on Peach Grove properties. One property experiences minor increases of less than +0.02m. • Minor reductions of up to -0.06m on residential and commercial properties on and to the east of Ocean Drive. • Widespread increases of +0.03 to +0.07m on St Josephs School grounds.
1% AEP plus climate change	Similar performance to 1% AEP, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). No reduction in performance due to sea level rise.

Summary

While there are minor to modest (up to -0.2m) reductions in flood levels on a large number of residential properties, these are offset by minor increases (+0.03 to +0.07m) on St Josephs School. An engineered berm in the national park is likely to result in vegetation impacts and hence requires consultation with NPWS.

Draft Options Assessment Report

JACOBS**3.4.3.2 Option 6B+6C+6D+6E****Description of Options**

The following options were assessed in combination (Options 6B+6C+6D+6E):

- Option 6B – increase the existing diversion channel capacity behind Blackbutt Crescent properties to reduce overflows onto properties, achieved by a combination of widening the existing channel to a base width of 6 – 10m (current base width 3 – 5m, top width 5 – 8m), raising the banks (e.g. block retaining wall along the property boundaries) and clearing of vegetation in the channel.
- Option 6C – construct new diversion channel 3m base width and 1m deep behind Peach Grove properties north of Tunis Street to direct flows south to the easement at the end of Tunis Street. This is outside of the national park. Form a bund on the lower side of the channel to increase capacity.
- Option 6D – install new trunk drainage line from the easement down Tunis Street to discharge to the river (approximately 740m). A new line consisting of 3 x 1.35m diameter pipes has been assessed, having a system capacity of approximately 5% AEP (about 9.5m³/s) and would reduce the 1% AEP overland flows through downstream properties by about 67%. A rock debris trap/basin would need to be constructed at the trunk drainage inlet to reduce the inlet blockage risk.
- Option 6E – upgrade drainage in Gow Place cul-de-sac to reduce overflows through properties and the retirement village villas. The existing drainage consists of a 450mm pipe which drains through an easement and discharges to open space between Gow Place and Tunis Street. There is an existing 3m lintel pit inlet plus smaller approximately 1m lintel inlets. Replacing one of these smaller inlets with a second 3m lintel is proposed. The existing 450mm pipe is proposed to be upgraded to 1.05m pipe and extended to discharge further down the gully to prevent backflow into the cul-de-sac. A 900mm pipe connection from the gully to the new trunk drainage line is proposed.

Constraints assessment

- Option 6B - Works would need to be undertaken on the edge of the national park land for a 100m section of the upgraded channel. The channel is assumed to be grassed and would need to be maintained to ensure limited vegetation growth.
- Option 6C - The channel is assumed to be grassed and would need to be maintained to ensure limited vegetation growth.
- Option 6D – There are numerous existing underground utilities (Telstra, Optus, NBN, power, stormwater) under Tunis Street and adjoining streets. Approximately 10 crossings of the utilities are identified and would need to be protected. It is assumed that the existing utilities are at sufficiently shallow depth to enable the new trunk drainage to be laid beneath. Trench construction methods are expected to be appropriate for most sections of the alignment. Deep trenching (up to 3m) with temporary shoring is likely to be required for sections of the alignment. Pipe jacking installation is expected to be required in the section between Lord Street and Lake Street (about 200m) to allow the road access to remain open (e.g. Coles loading dock). Design and construction will need to minimise traffic impacts including delivery truck access to Coles Supermarket loading dock. A rock debris trap/basin would need to be constructed at the trunk drainage inlet to reduce the inlet blockage risk.
- A structural assessment was undertaken for Option 6D due to the space constraints related to this option. Relevant findings are summarised below

The existing buildings are single storey and are likely to have shallow foundations. The construction zone of construction access & excavation for the proposed 3x 1.35m diameter pipes would need to extend approx. 3m to 5m from the edge of the new pipes to limit effect to the existing buildings. For open cut sections this construction zone would take up most of the two lanes of Tunis Street and footpaths i.e. 11m to 15m wide. Appropriate traffic diversions would be required.

Vibration due to construction activities can be a concern and a detailed structural inspection of the existing buildings should be conducted to assess if some areas of the existing buildings are more susceptible to such vibration. The construction techniques can then be chosen to limit effects in these vibration sensitive zones.

Draft Options Assessment Report

The soils in this location are likely to be high acid-sulphate. Trial pitting and geotechnical investigation and interpretation should be carried out by to confirm risks and mitigation measures.

Overall, it is considered feasible to construct 3x 1.35m diameter stormwater flood control pipes underground along Tunis Street. The width and depth of excavation for the pipes would be considerable taking up most of Tunis Street and footpaths. Numerous controls would need to be put in place for environmental considerations and for the structural integrity of existing buildings during construction. Consideration could be given to the option for 2x larger pipes to limit the width of excavation and zone of construction activities. The other alternative would be for rectangular box culverts where open cut & cover excavation might be considered – this may offer some advantages in terms of width of excavation but would require a substantial structural cover slab to withstand the vehicular loadings.

Hydraulic performance

Flood impact maps, showing the change in flood levels, are presented on Figure 3-10 to Figure 3-12 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Option 6B+6C+6D+6E is summarised in Table 3-4.

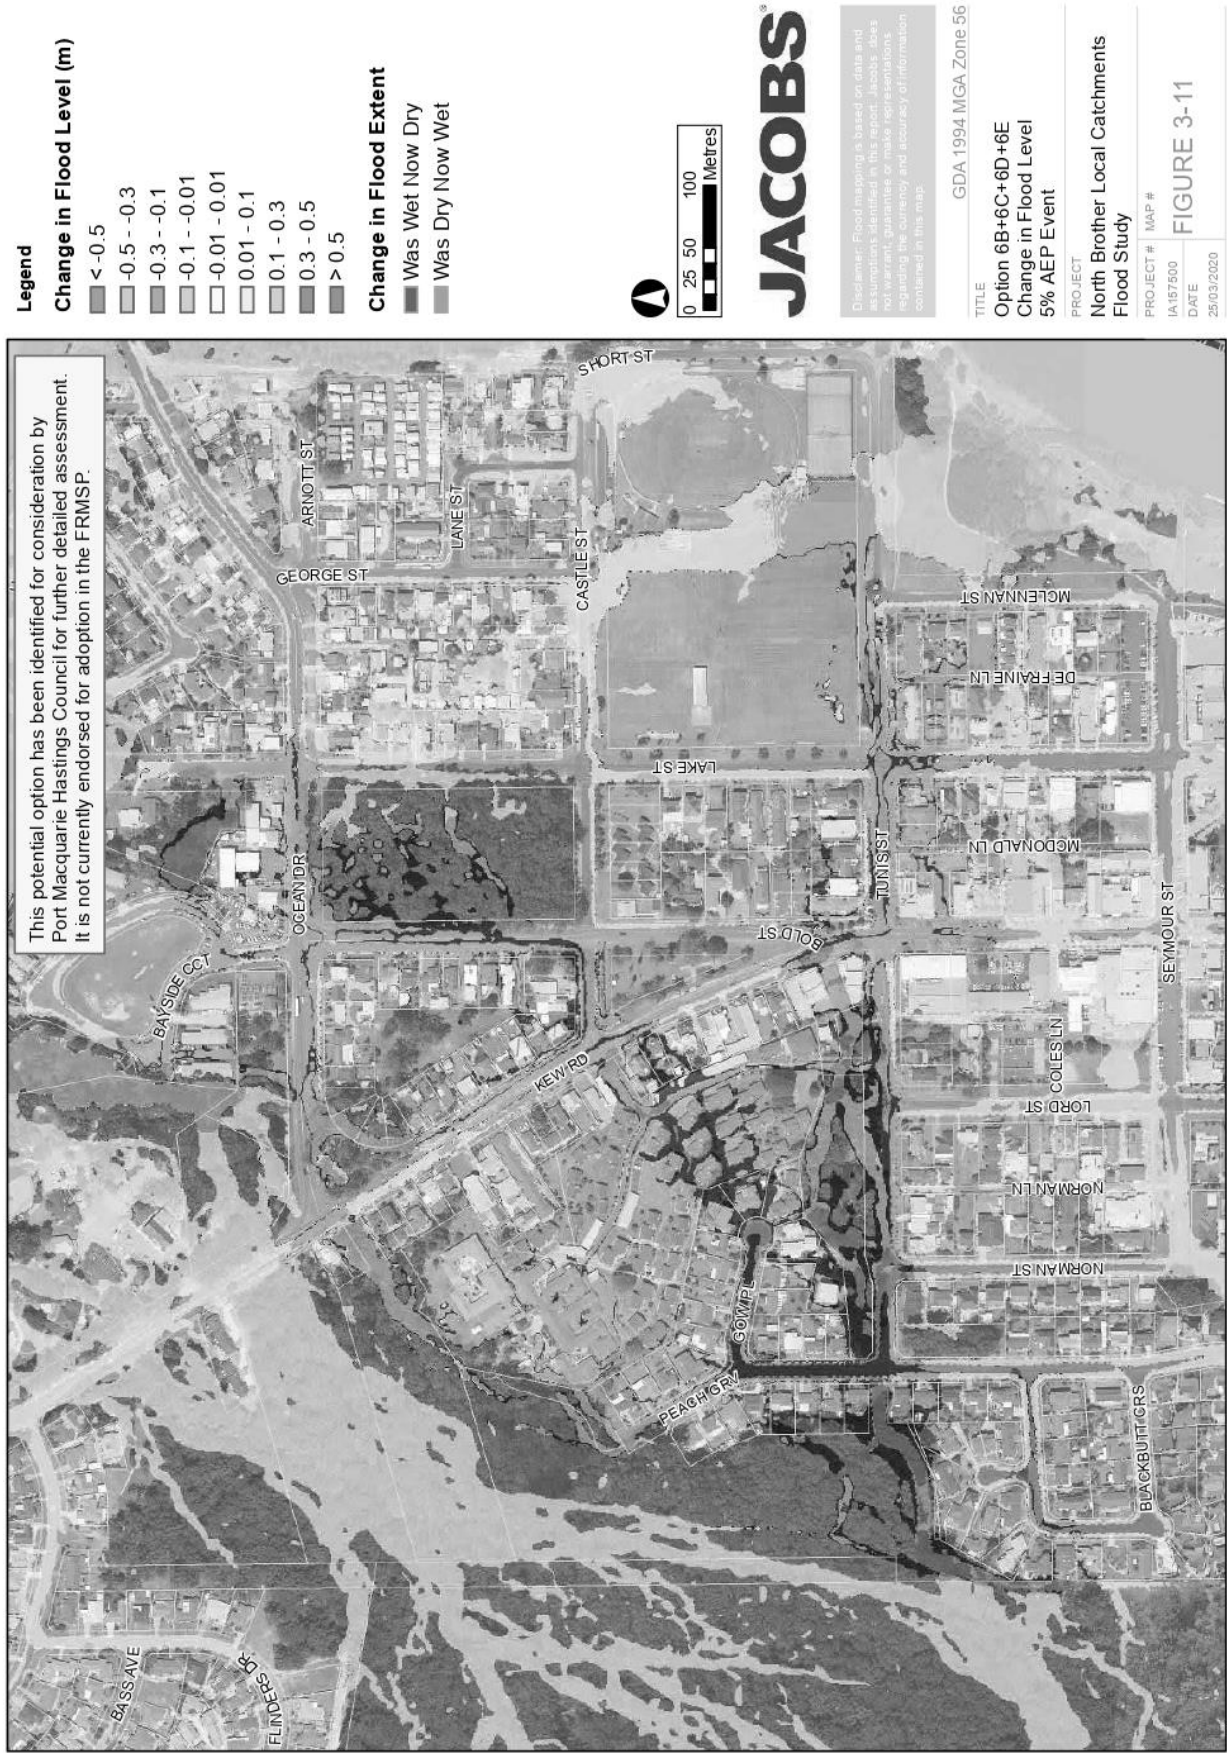

Table 3-4 Hydraulic performance of Options 6B+6C+6D+6E

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> • Reductions in flood levels of up to -0.3m on Gow Place properties and Laurieton retirement village villas, including substantial reductions in flood extent. • Reductions in flood levels of up to -0.4m on Peach Grove properties including reductions in flood extent. • Minor reductions of up to -0.05m on residential and commercial properties on and to the east of Kew Road/Bold Street.
5% AEP	<ul style="list-style-type: none"> • Reductions in flood levels of up to -0.3m on Gow Place properties and Laurieton retirement village villas, including substantial reductions in flood extent. • Reductions in flood levels of up to -0.5m on Peach Grove properties including reductions in flood extent. • Reductions of -0.05 to -0.1m on residential and commercial properties on and to the east of Ocean Drive, with some localised reductions of -0.2m. • Removal of areas of very high hazard (up to H5) in road and on properties between Peach Grove and to the east of Kew Road/Bold Street.
1% AEP	<ul style="list-style-type: none"> • Reductions in flood levels of up to -0.4m on Gow Place properties and Laurieton retirement village villas, including some reductions in flood extent. • Reductions in flood levels of up to -0.5m on Peach Grove and Blackbutt Crescent properties including reductions in flood extent. Some localised reductions of up to -0.7m. • Reductions of -0.1 to -0.2m on residential and commercial properties on and to the east of Ocean Drive. • Removal of areas of very high hazard (up to H5) in road and on properties between Blackbutt Crescent/Peach Grove and to the east of Kew Road/Bold Street.
1% AEP plus climate change	Generally similar performance to 1% AEP, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). Slight reduction in performance due to sea level rise in low elevation areas below 3m AHD, where the reductions fall from -0.07m in the current climate case to -0.01m in the climate change scenario.

Draft Options Assessment Report**JACOBS®****Summary on performance**

The combined options 6B+6C+6D+6E provide substantial reductions in flood levels, extents and hazard as a result of significant drainage capacity upgrades. There are minor reductions in flood levels in low-lying areas as a result of sea level rise in the climate change scenario.

Draft Options Assessment Report

JACOBS®

3.4.4 Lake Street at Seymour Street, Laurieton

The corner property at this location receives overland flows and trunk drainage flows from the Quarry Way flow path. There is an open channel and flow path through this property, where the dwelling is surrounded by high hazard flooding to depths of over 1m in the 1% AEP event. The floodwaters pond behind the raised road crest in Lake Street before overflowing over the road and around the southern side of the Laurieton United Services Club. It is identified as being affected by above-floor flooding.

The drainage at this location includes 2x 1.5m x 0.75m box culverts at the inlet at the downstream end of the channel through this property, turning into 2x 1200mm pipes crossing Lake Street, which then increase to 2x 1500mm pipes on the low side of the road and discharging to a channel on the southern side of the Services Club.

Flood mitigation works proposed for the Quarry Way flow path as described in Section **Error! Reference source not found.** would mitigate flooding at this location. Further works could be provided for additional mitigation.

3.4.4.1 Option 8B**Description of Options**

Option 8B was selected for assessment. The culvert inlet is currently unscreened and has been modelled as 50% blocked due to likely debris blockage. A large-faced debris screen or other debris controls are proposed to retrofit the existing culvert inlet to reduce the risk of blockage. The debris screen is assumed to be effective and has been represented with a reduced blockage factor of 10%.

Refer to **Error! Reference source not found.** for illustration.

Constraints assessment

No major constraints identified for this option. Inspection and maintenance after significant storm events are required to increase reliability.

Hydraulic performance

Flood impact maps, showing the change in flood levels, are presented on Figure 3-14 to Figure 3-16 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Option 8B is summarised in Table 3-5.

Draft Options Assessment Report

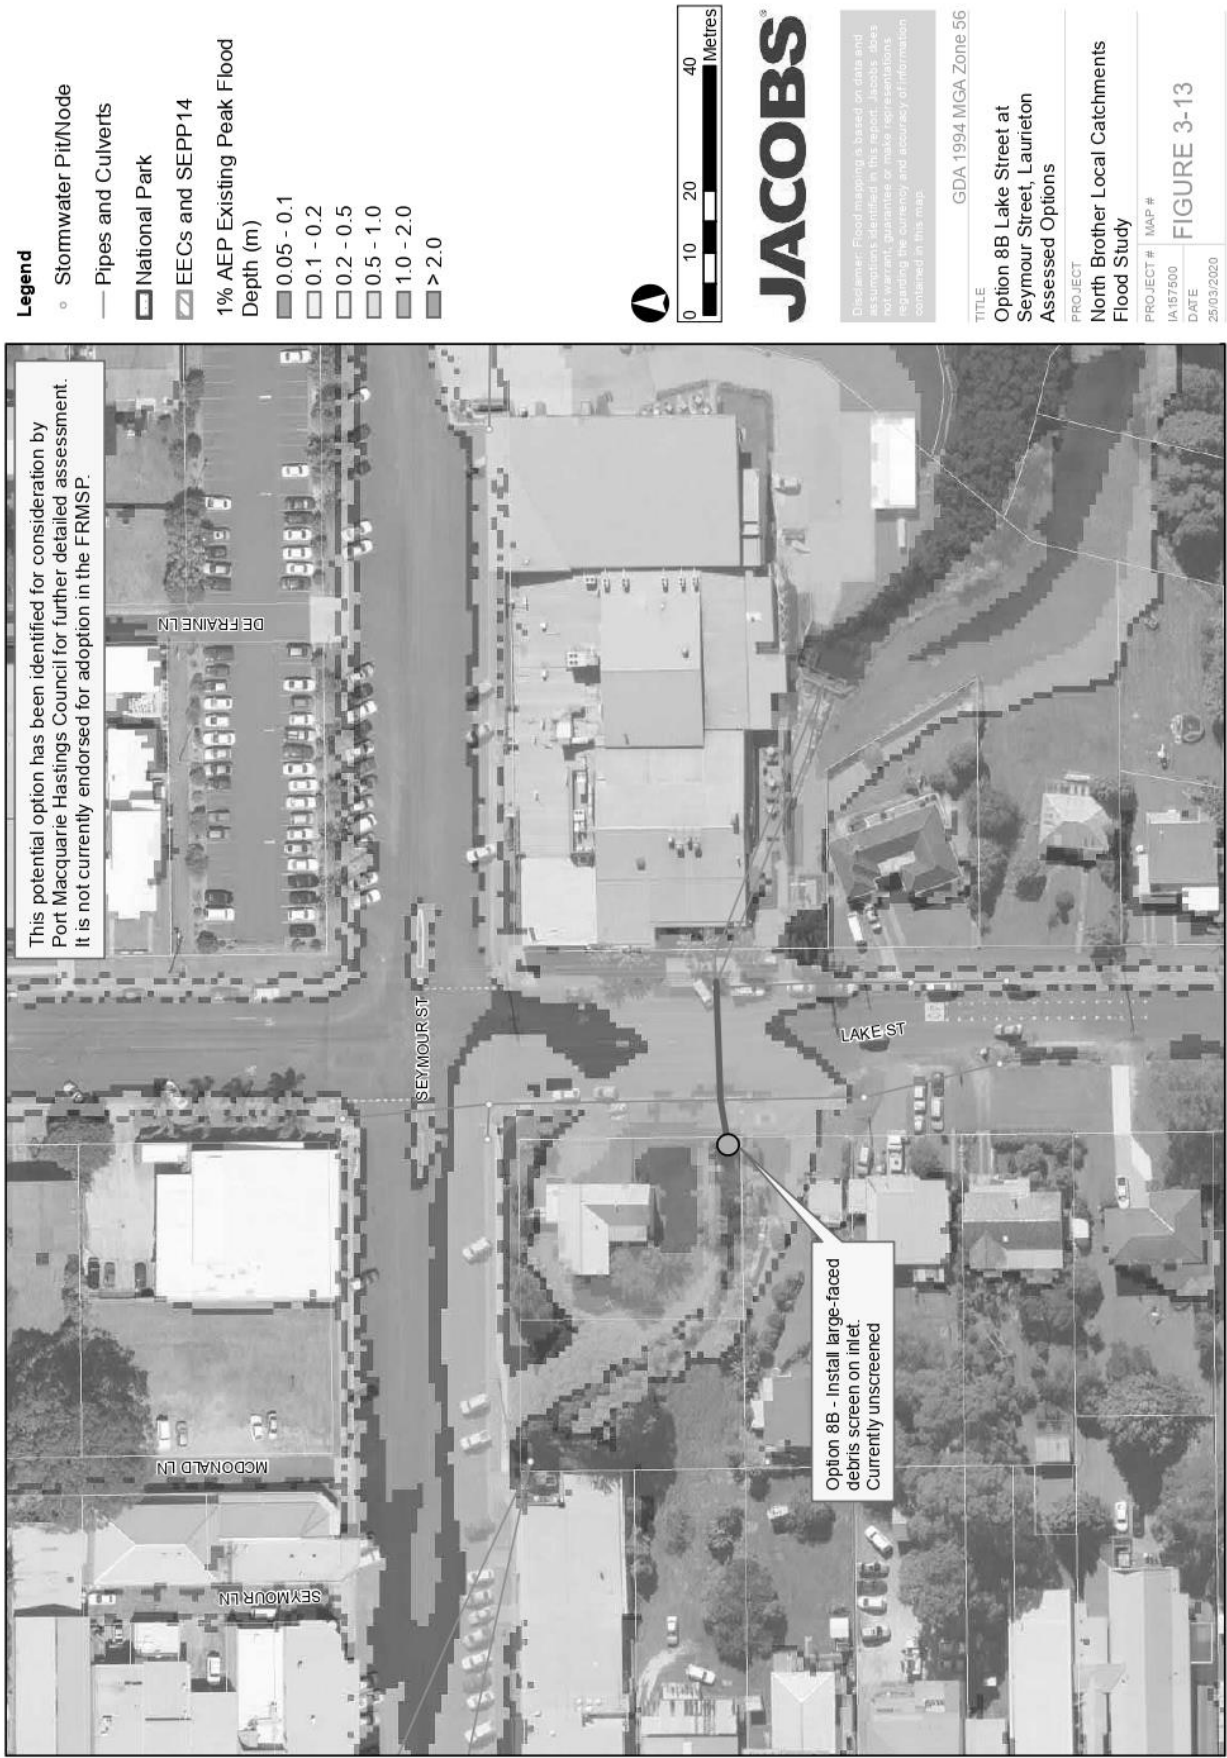

Table 3-5 Hydraulic performance of Options 8B

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> Minor reductions of -0.03m on private property dwelling and Laurieton United Services Club side entrance. Reductions of up to -0.1m on Lake Street
5% AEP	<ul style="list-style-type: none"> Reductions of -0.08m on private property dwelling and -0.13m at Laurieton United Services Club side entrance. Reductions of up to -0.1m on Lake Street Minor increases of less than -0.02m on some private properties and parts of club property due to reduced drainage capacity of local stormwater drainage branches.
1% AEP	<ul style="list-style-type: none"> Reductions of -0.1m on private property dwelling and Laurieton United Services Club side entrance. Reductions of up to -0.1m on Lake Street. Minor localised increases of less than -0.02m on some private properties due to reduced drainage capacity of local stormwater drainage branches.
1% AEP plus climate change	Similar performance to 1% AEP, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). No reduction in performance due to sea level rise.

Summary on performance

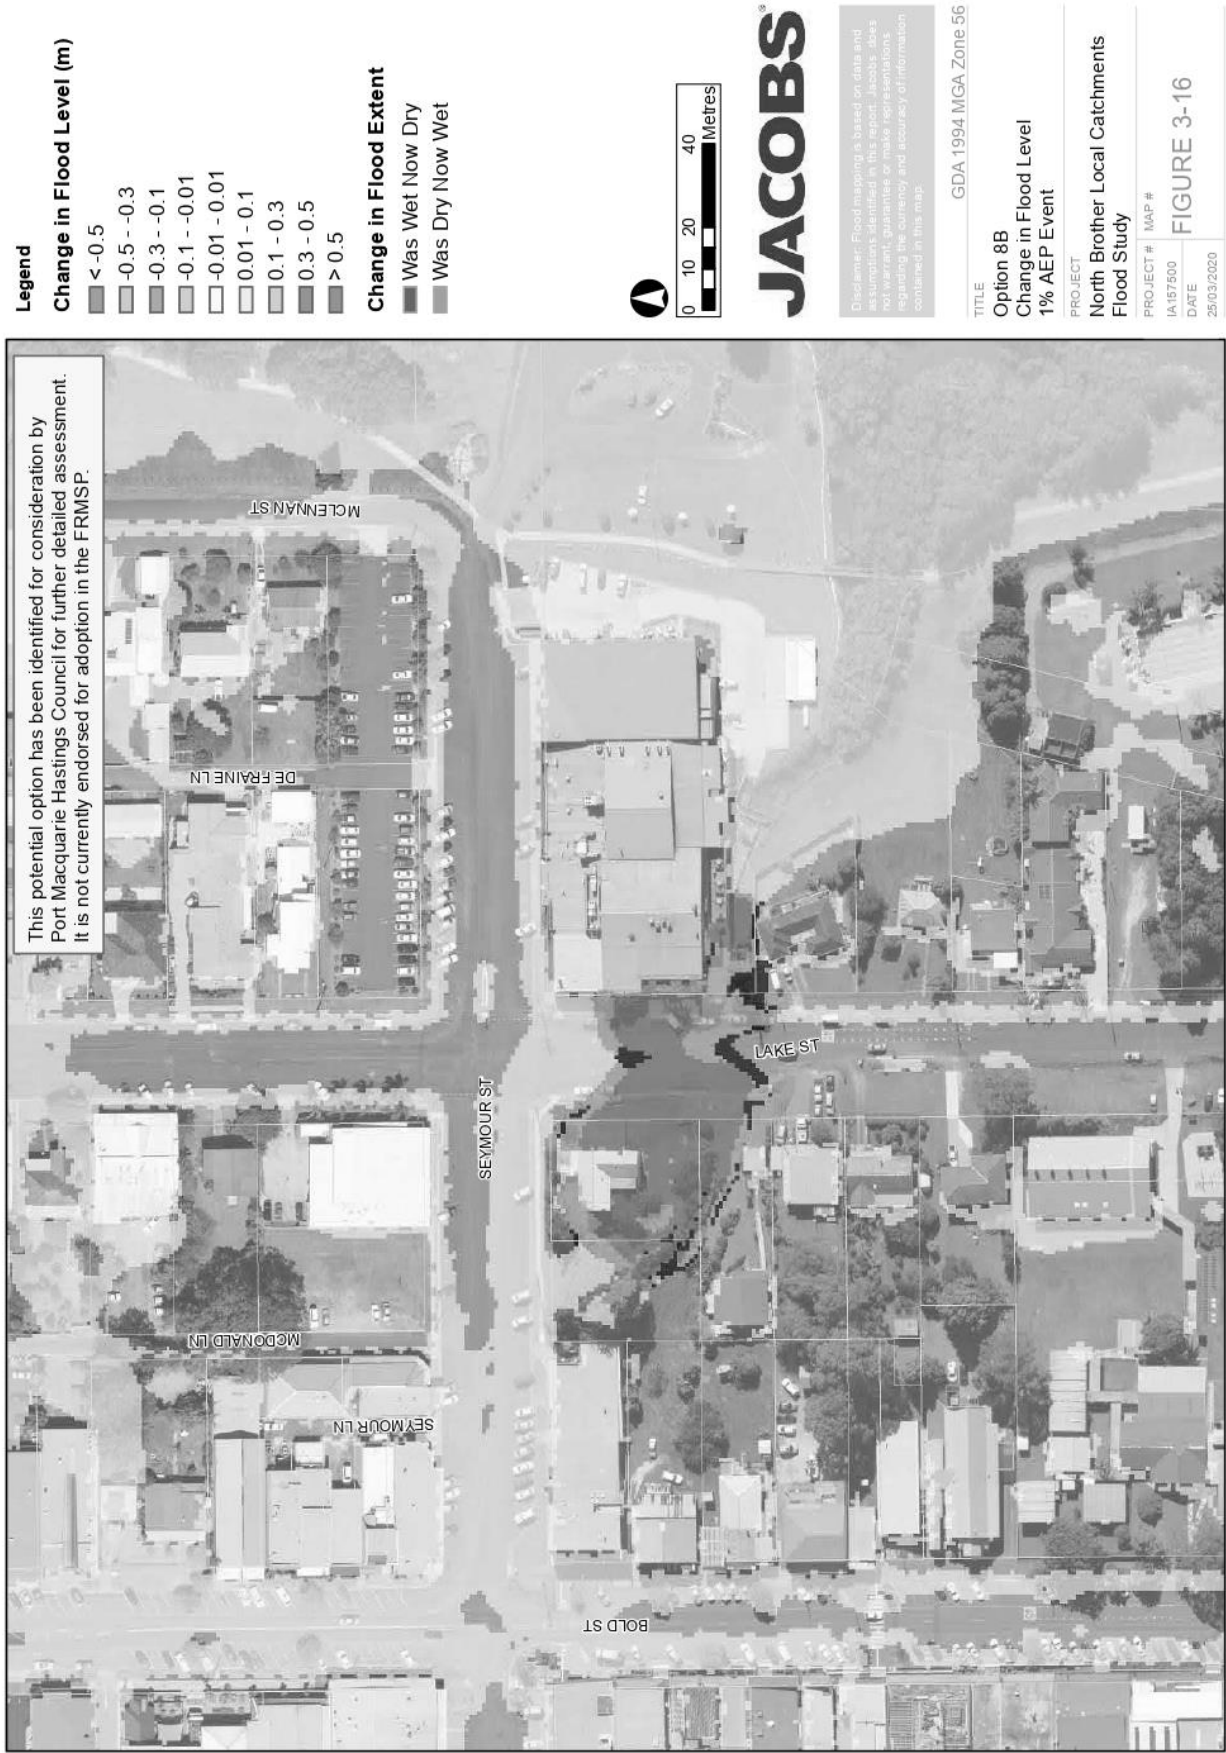

Option 8B provides minor to modest improvements (up to -0.1m) in flooding conditions with benefits confined to one residential property. The spatial extent of the reductions in flood levels at the Services Club are limited to the western side entrance on Lake Street, while there are no changes in flood levels along the main northern side of the club building. The effect of the proposed inlet debris screen is constrained by the limited capacity of the existing culverts crossing the road.

While the debris screen proposed as Option 8B provides at best modest improvements to flooding conditions to property and the road, it could be considered by Council as a low-cost measure to reduce the risk of severe blockage of the culvert inlet at this and other locations in the study area.

Draft Options Assessment Report

JACOBS**3.4.5 St Joseph's School, Laurieton**

Flooding at the school results from natural flow paths being directed down to Ocean Drive to three culvert crossings. The culverts discharge on the low side of the road and along with road overflows, overland flooding passes through the school in three main flow paths, including one through the main cluster of school administration and classroom buildings. Council's stormwater drainage spatial layer does not show an existing underground trunk drainage conveying flows through the school grounds, although from review of aerial photography there appears to be drainage pits connected to a privately-owned system. Flows exceed 0.5m deep in the 1% AEP event with areas of very high (H5) flood hazard.

Peak overland flows in these flow paths are summarised in Table 3-6.

Table 3-6 Peak flood flows in overland flow paths at St Joseph's School

Location	Event AEP		
	0.2EY	5% AEP	1% AEP
Northern flow path (admin bldg.)	4	5.5	8
Middle flow path	5.5	6.5	8.5
Southern flow path	8.5	10	12.5
Total	17.5	22	29

Draft Options Assessment Report

JACOBS®

3.4.5.1 Option 9A**Description of Option**

Option 9A was assessed, involving widening and reconstruction of a landscaped open channel in the southern flow path. The southern flow path and road cross culvert is the main flow path and there is a formalised open channel provided for this flow path. The proposed channel would have an 8m base width (about 10m top width) and a depth of 1 – 1.5m. The existing channel has an approximately 6 – 8m top width with variable base width.

Box culverts were originally proposed for this site to fit under the existing channel, however, elevations are too low to fit such a culvert option while maintaining a surface flow path.

A rock debris trap/basin would need to be constructed at the Ocean Drive culvert inlet to reduce the inlet blockage risk.

Constraints assessment

There are a number of existing structures and features including buildings, footbridges, car parks and paths which would be potentially affected or considered in the design of Option 9A. The minimum clearance between buildings or other existing structures is about 19m.

The existing buildings are single storey and are likely to have shallow foundations. Additionally, one of the buildings is an existing old church building believed to be around 120 years old. The construction access & excavation zone for the proposed channel widening would need to extend approximately 3 – 5m from the edge of the channel to limit effect to the existing buildings.

Vibration due to construction activities can be a concern and a detailed structural inspection of the existing buildings should be conducted to assess if some areas of the existing buildings are more susceptible to such vibration. The final alignment of the proposed culvert can then be chosen to avoid these vibration sensitive zones.

The sediments adjacent to the school may be mildly contaminated. The soils in this location are likely to be high acid-sulphate. Trial pitting and geotechnical investigation and interpretation should be undertaken to confirm risks and mitigation measures.

There will be numerous building stormwater drains discharging into the existing open channels in the school grounds and these will need to be surveyed and coordinated with the design of the modified open channel.

The existing channel and its banks appear to be landscaped with well-established gardens, which are likely to be of high value to the school and adjacent church. The option needs to include landscaping to re-establish the gardens.

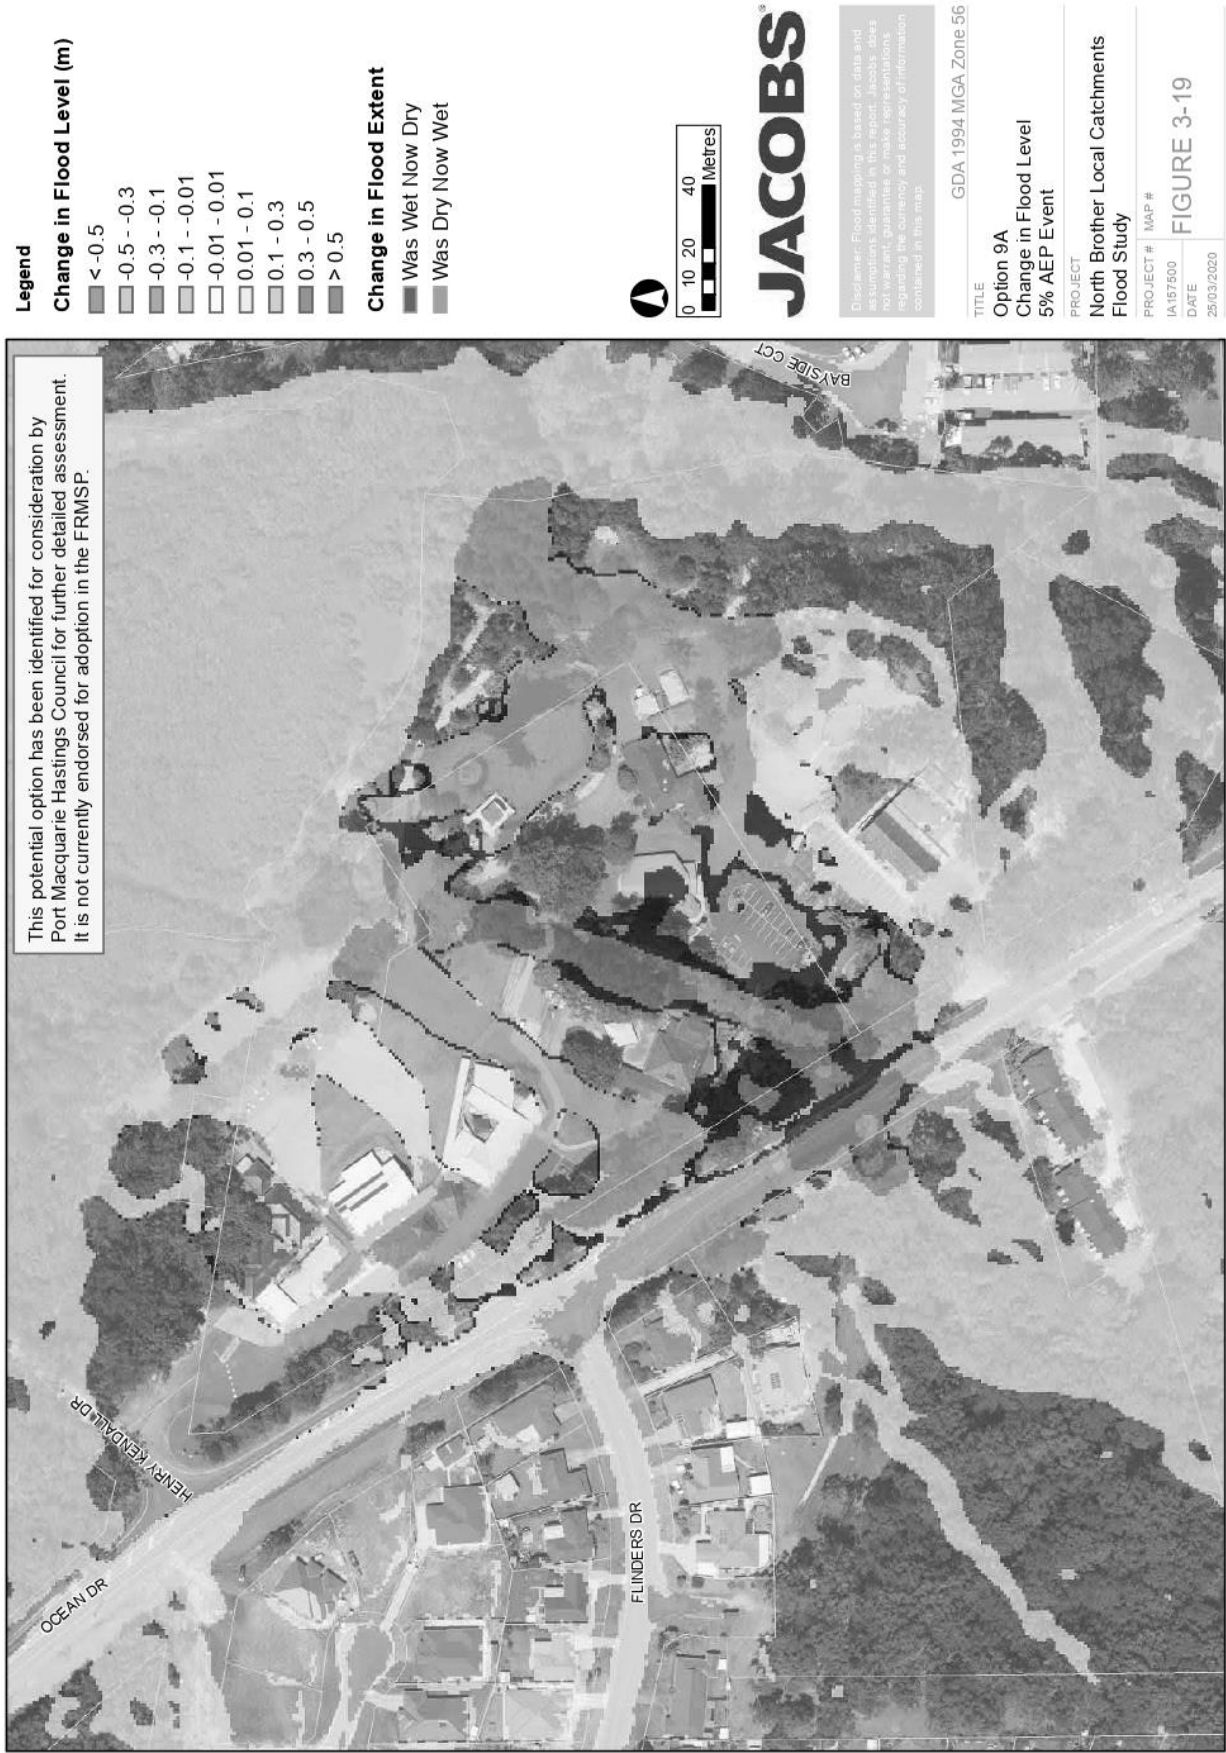

There are existing utilities along Ocean Drive (Optus, Telstra, NBN, power) which cross the existing culverts under the road. It is assumed that sufficient clearance from the utilities can be maintained if the upgraded culverts are installed at a similar elevation.

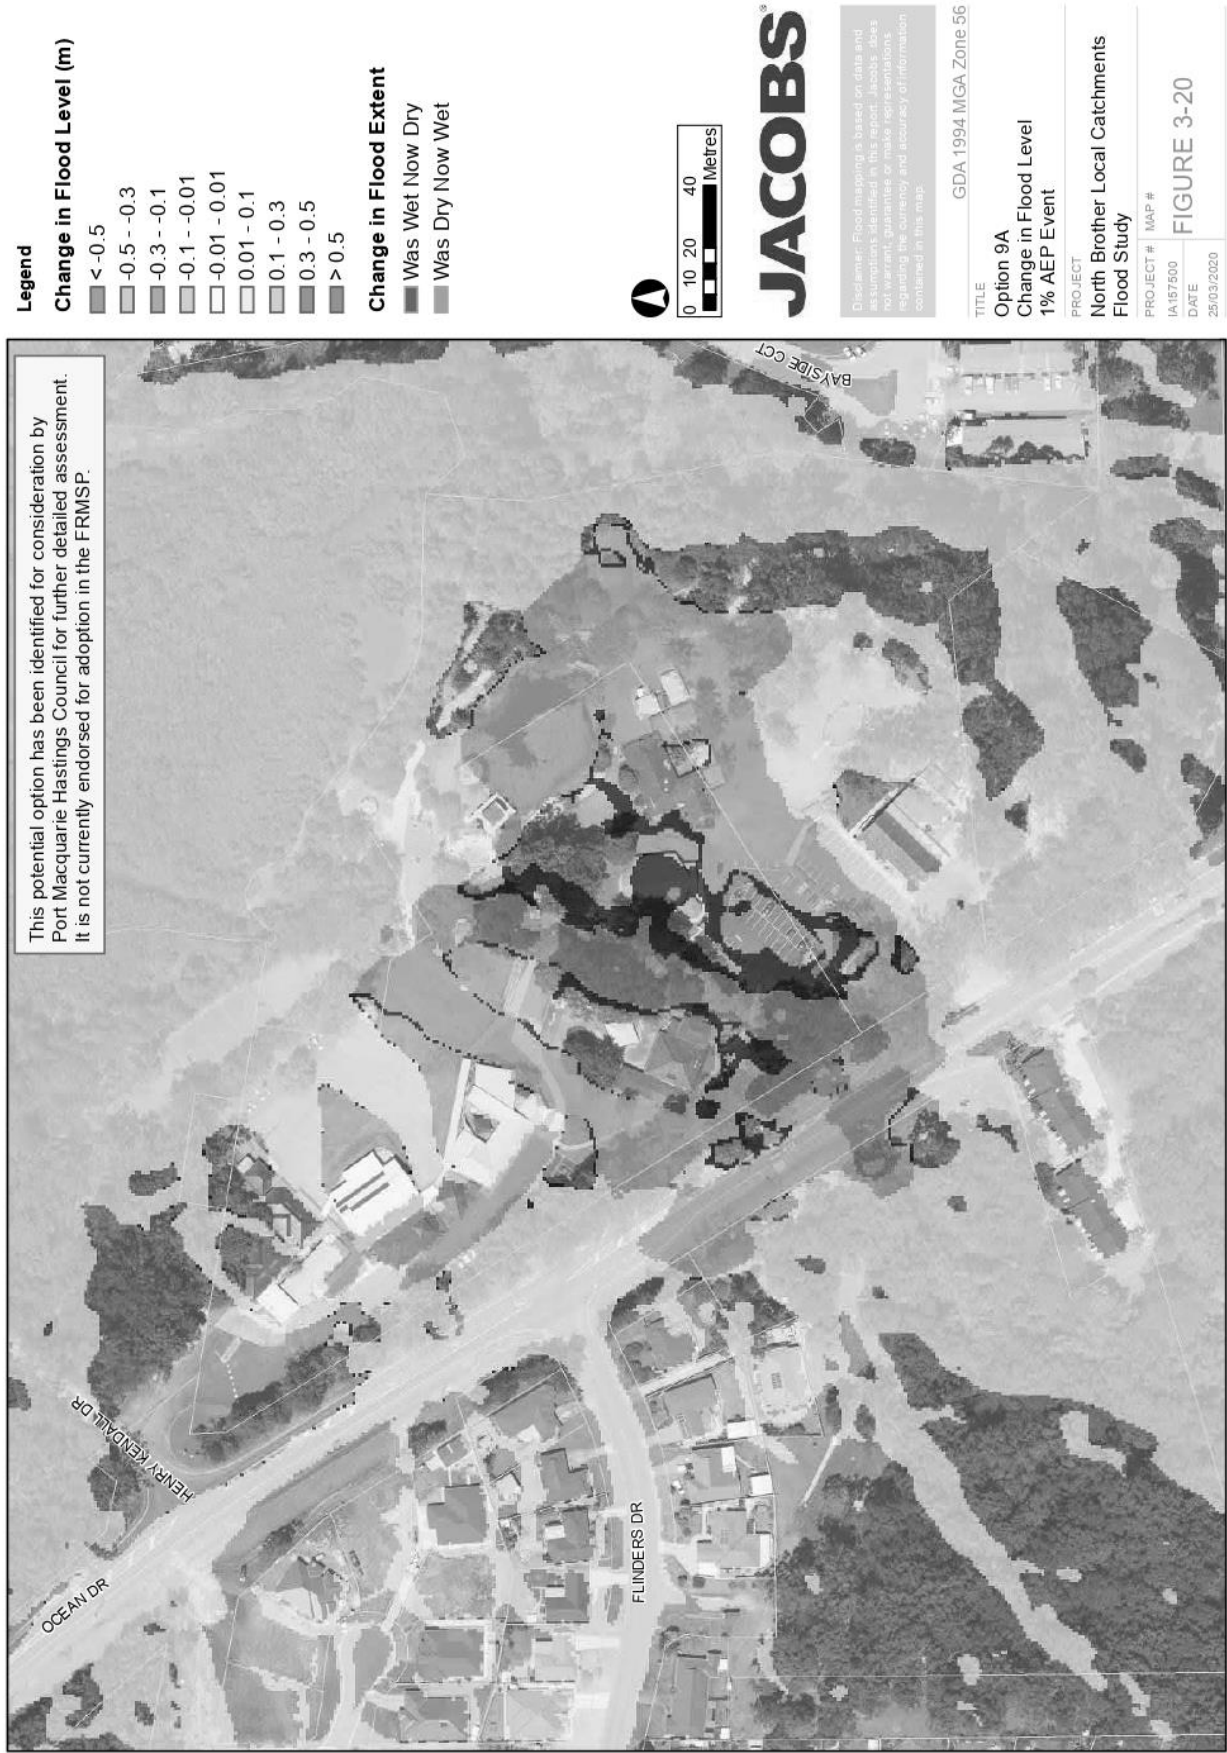

The channel through the mangrove/wetland areas would need to be widened downstream to Stingray Creek to accommodate increased flood flows and this would have localised impacts on sensitive habitats (EECs/SEPP 14 wetlands). Additionally, the school grounds have dense tree coverage which will inhibit construction access. Existing trees will need to be protected during the construction works. It is anticipated that a REF will be required and would need a flora and fauna study.

Hydraulic performance

Flood impact maps, showing the change in flood levels, are presented on Figure 3-18 to Figure 3-20 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Option 9A is summarised in Table 3-7.

Draft Options Assessment Report

Table 3-7 Hydraulic performance of Options 9A

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> Maximum decreases of -0.4 to -0.5m in the channel (southern flow path) upstream and downstream of Ocean Drive culvert crossing, with reductions in flood extent Decrease of -0.02 to -0.06m at and between school buildings, minimal reduction in flood extent Some reduction in high-very high hazard extent in southern and middle flow paths including on walkways, minimal reduction in flood hazard around school office (only localised high hazard in existing case and mostly low hazard)
5% AEP	<ul style="list-style-type: none"> Maximum decreases of -0.3 to -0.4m in the channel (southern flow path) upstream and downstream of Ocean Drive culvert crossing, with reductions in flood extent Decrease of -0.02 to -0.08m at and between school buildings, minimal reduction in flood extent Some reduction in high-very high hazard extent in southern and middle flow paths including on walkways, minimal reduction in flood hazard around school office (only localised high hazard in existing case and mostly low hazard)
1% AEP	<ul style="list-style-type: none"> Maximum decreases of -0.3 to -0.4m in the channel (southern flow path) upstream and downstream of Ocean Drive culvert crossing, with reductions in flood extent Decrease of -0.02 to -0.08m at and between school buildings, minimal reduction in flood extent Some reduction in high-very high hazard extent in southern and middle flow paths including on walkways, minimal reduction in flood hazard around school office (only localised high hazard in existing case and mostly low hazard)
1% AEP plus climate change	Similar performance to 1% AEP, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). No reduction in performance due to sea level rise.

Draft Options Assessment Report

JACOBS®

3.4.5.2 Option 9B**Description of Option**

An alternative option to 9A is option 9B, consisting of installation of box culverts beneath the middle flow path. There is an existing shallow overland flow path through this alignment and it was assumed that this could be retained. The culverts would need to fit between existing school buildings. A rock debris trap/basin would need to be constructed at the Ocean Drive culvert inlet to reduce the inlet blockage risk.

Constraints assessment

The culverts would need to fit between two existing buildings and require reconstruction of a vehicle access driveway to one of the buildings. There is 16m clearance between the buildings. The existing buildings are single storey and are likely to have shallow foundations. The construction access and excavation zone for the proposed culverts would need to extend approximately 3 – 5m from the edge of the proposed culverts to limit effect to the existing buildings.

Vibration due to construction activities can be a concern and a detailed structural inspection of the existing buildings should be conducted to assess if some areas of the existing buildings are more susceptible to such vibration. The final alignment of the proposed culvert can then be chosen to avoid these vibration sensitive zones. Overall, the excavation for the proposed 1.2m deep box culverts can be located at least 5m from the existing structures which should, subject to investigations, not interfere with the existing building foundations.

The sediments adjacent to the school may be mildly contaminated. The soils in this location are likely to be high acid-sulphate. Trial pitting and geotechnical investigation and interpretation should be carried out by to confirm risks and mitigation measures.

There will be numerous building stormwater drains discharging into the existing open channels in the school grounds and these will need to be surveyed and coordinated with the design of the modified open channel.

There appears to be an existing pit and pipe drainage line beneath the middle flow path, which may need to be relocated for installation of the box culverts. This line should be maintained for local drainage.

There are existing utilities along Ocean Drive (Optus, Telstra, NBN, power) which cross the existing culverts under the road. It is assumed that sufficient clearance from the utilities can be maintained if the upgraded culverts are installed at a similar elevation.

The channel through the mangrove/wetland areas would need to be widened downstream to Stingray Creek to accommodate increased flood flows and this would have localised impacts on sensitive habitats (EECs/SEPP 14 wetlands). Appropriate rock scour protection would be required at the culvert outlet. It is anticipated that that an REF will be required and would need a flora and fauna study.

Hydraulic performance

Flood impact maps, showing the change in flood levels, are presented on Figure 3-21 to Figure 3-23 for the 0.2EY, 5% and 1% AEP events, respectively. The hydraulic performance of Option 9B is summarised in Table 3-8.

Draft Options Assessment Report

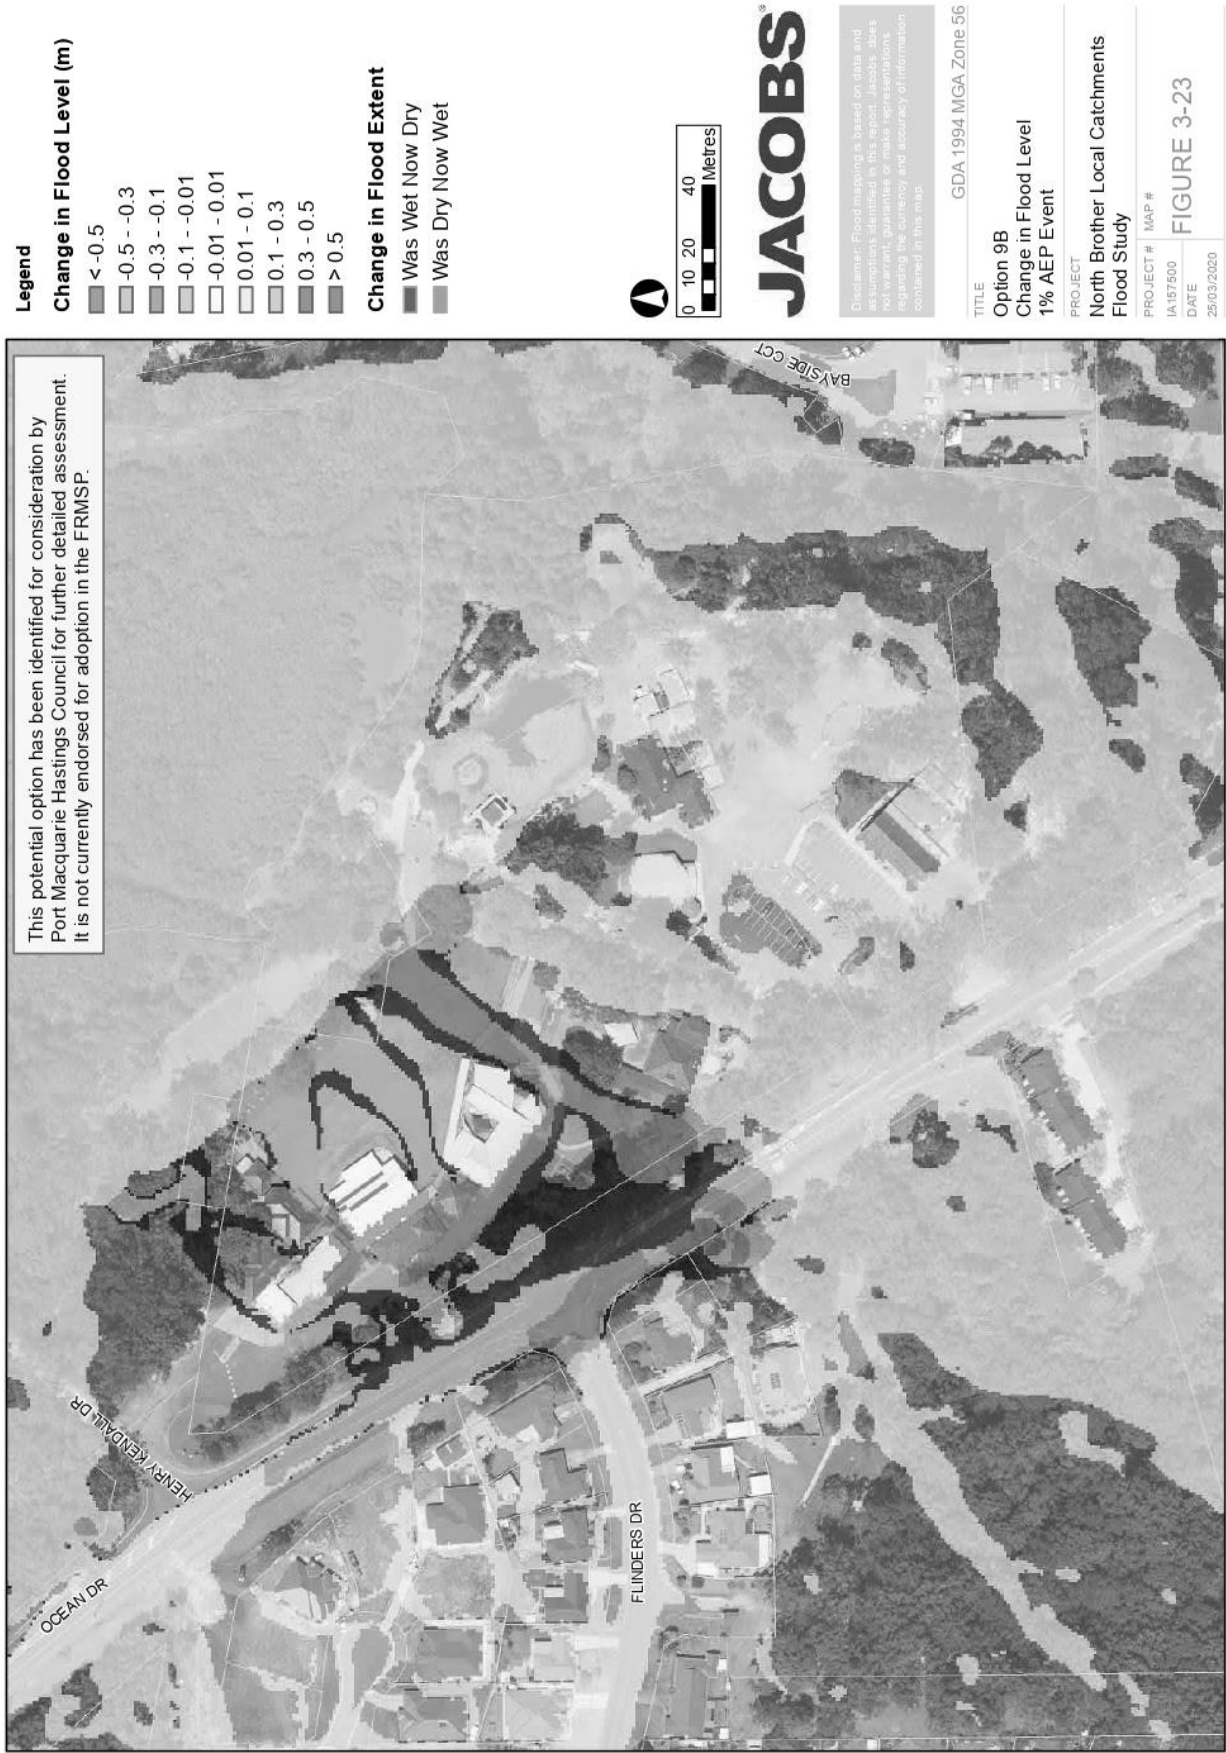

Table 3-8 Hydraulic performance of Options 9B

Event AEP	Changes in flood conditions
0.2EY	<ul style="list-style-type: none"> Maximum decreases of -0.2 to -0.3m in the middle flow path and adjacent buildings through the school, with substantial reductions in flood extent Decrease of up -0.2m around school office and adjacent buildings, with substantial reduction in flood extents Reductions in flood depths on Ocean Drive around Flinders Drive of up to -0.2m. reductions in flood levels/depths around Ocean Drive culvert crossing (middle flow path) of up to -0.3m with substantial reduction in flood extents Reductions from high-very high hazard (up to H5) in the middle flow path in the existing case including on walkways, down to all low hazard (H1) in mitigation case Reductions from localised high hazard (up to H4) around the school office in the existing case including on walkways, down to low hazard (H1, some localised H2) in mitigation case.

1% AEP plus climate change	Similar performance to the 1% AEP event, in terms of reductions in flood levels in mitigated versus existing development case (with climate change). No reduction in performance due to sea level rise.

Draft Options Assessment Report

JACOBS

3.5 Summary of Options

The assessed options are summarised in Table 3-9. A description, constraints/impacts, hydraulic performance, improvements to property flooding and estimated savings in flood damages are provided. The savings in flood damages are a comparison of the net present value of average annual flood damages between the mitigated and existing cases, based on a 0.5m protection level, over an assumed 50 year life of the option and assuming a 7% discount rate.

For the flood damage assessment, the PMF was assumed not be changed by the mitigation options given the magnitude of the flood event. The AAD is not sensitive to this assessment given the rarity of the PMF event.

The flood damages also only consider overland flooding and do not account for damages due to peak mainstream flooding.

Further detailed assessment will include cost estimation and benefit-cost assessment and multi-criteria assessment, incorporating refinements to the options where appropriate.

Table 3.9 Summary of assessed flood modification options performance

Option	Location	Description	Constraints and Impacts Plus other comments	Hydraulic Benefits (1% AEP event unless otherwise noted) And Negative Impacts if Any	Savings in Flood Damages (50 years life, 7% Discount Factor)	Cost of Works	Benefit Cost Ratio
4A+4B +4C	Koonwarra Street to Pelican Court, West Haven	<ul style="list-style-type: none"> Voluntary acquisition of 53 Koonwarra Street. Regrade the site to form a flow path New additional trunk drainage line 2x 1200mm diameter pipes, intercepting flows at downstream end of channel on Captain Cook Bicentennial Drive villas, cross Ocean Drive and run under The Gateway. Inlet debris trap basin required. Voluntary acquisition of 7 Pelican Court. Regrade the site to form a flow path 	<ul style="list-style-type: none"> High property prices (~\$500K each) plus demolition and disposal costs Existing underground utilities in Ocean Drive and The Gateway (Telstra, Optus, NBN, power, stormwater). Substantial number of trees in western verge of The Gateway, require removal if running new trunk drainage in the verge. Limited space to widen existing channel running through Captain Cook Bicentennial Drive villas and then turning at Ocean Drive. Presence of existing driveway crossing over channel into Ocean Drive property. Minimal space for rock debris trap at new trunk drainage inlet structure. Requires more detailed site assessment for potential rock debris loads. 	<ul style="list-style-type: none"> Koonwarra Street – flood levels reduced by -0.04m to -0.4m at four properties Minor localised increase of +0.02m on Captain Cook Bicentennial Drive villas Pelican Court – flood levels reduced by -0.2 to -0.7m in roadway and alleyway. Reductions on properties typically to -0.1m, up to -0.4m on two properties. Eliminated occurrence of H4-H5 flood hazard at two dwellings in Koonwarra Street (one through acquisition of property). Reduced flood hazard on Ocean Drive from up to H5 to H2. Note that road may be cut-off in other locations. Reduced extent of H3-H5 hazard in Pelican Court. 0.2EY event: Reduced flood hazard from H5 to H1-H2 in Pelican Court, some H3 in alleyway Number of above-floor flooded properties reduced by 6 in the 1% AEP event. 	\$3,876,000	TBC	TBC
				Options 4B and 4C reduce flood levels and hazard on Ocean Drive and Pelican Court including up to 20 dwellings. Option 4A reduces the number of properties at risk due to the property purchase. However, the reductions in flood levels on adjacent properties is generally minor. The substantial reductions are limited to one property. The likely high cost of this option may make this option more challenging to justify purely from an economic standpoint. Notwithstanding, the removal of a household subject to high flood hazard should be considered in the subsequent multi-criteria evaluation of this option			

Option	Location	Description	Constraints and Impacts Plus other comments	Hydraulic Benefits (1% AEP event unless otherwise noted) And Negative Impacts if any	Savings in Flood Damages (50 years life, 7% Discount Factor, with 0.5m protection level)	Cost of Works	Benefit Cost Ratio
6A	Tunis Street Overland Flow Path, Laurieton	Construct/raise berm between the natural flow path and the diversion channel above Blackbutt Crescent to reduce overflows into the diversion channel	<ul style="list-style-type: none"> Works fully within national park area, likely requiring removal of a large number of trees for the proposed bund in addition to site access for construction plants. The option will be constructed on a natural berm which appears to be formed from flood-flow deposits of rock rubble and other material. Geotechnical conditions may be challenging. Periodic maintenance of the proposed bund would be required. 	<ul style="list-style-type: none"> Reductions in flood levels of -0.05 to -0.2m on Gow Place properties and Laurieton retirement village villas, some localised areas greater than -0.02m. Reductions of -0.1m at Laurieton retirement village main facility. Localised reductions of up to -0.4m on Peach Grove properties. One property experiences minor increases of less than +0.02m. Minor reductions of up to -0.06m on residential and commercial properties on and to the east of Ocean Drive. Widespread increases of +0.03 to +0.07m on St Josephs School grounds Number of above-floor flooded properties reduced by 19 (residential) in the 1% AEP event. 	\$2,265,000 net	TBC	TBC
6B+6C +6D+ 6E	Tunis Street Overland Flow Path, Laurieton	<ul style="list-style-type: none"> Increase existing diversion channel capacity behind Blackbutt Crescent properties. Widen and remove/maintain vegetation Construct new diversion channel behind Peach Grove properties north of Tunis Street Install new 3 x 1.35m trunk drainage line from the easement down Tunis Street to discharge to the river (approximately 740m). Inlet debris trap basin required. Upgrade and extend drainage in Gow Place to 1.05m dia pipe. Upgrade pit inlets. Install new 900mm pipe connection from the gully to the new trunk drainage line. 	<ul style="list-style-type: none"> Works would need to be undertaken in part in the national park. Upgraded diversion channels are to be grassed and require maintenance to limit vegetation growth. Close proximity to existing buildings likely to have shallow foundations. Wide construction footprint for trenching likely to take up most of road corridor. Appropriate traffic diversions would be required. Vibration due to construction activities may be a concern. Acid sulphate soils in this location. Numerous existing underground utilities (Telstra, Optus, NBN, power, stormwater) under Tunis Street and adjoining streets. Approximately 10 crossings of the utilities are identified and would need to be protected. It is assumed that the existing utilities are at sufficiently shallow depth to enable the new trunk drainage to be laid beneath. Design and construction will need to minimise traffic impacts including delivery truck access to Coles Supermarket loading dock. Pipe jacking likely required for this section A rock debris trap/basin would need to be constructed at the trunk drainage inlet to reduce the inlet blockage risk. 	<ul style="list-style-type: none"> Reductions in flood levels of up to -0.4m on Gow Place properties and Laurieton retirement village villas, including some reductions in flood extent. Reductions in flood levels of up to -0.5m on Peach Grove and Blackbutt Crescent properties including reductions in flood extent. Some localised reductions of up to -0.7m. Reductions of -0.1 to -0.2m on residential and commercial properties on and to the east of Ocean Drive. Removal of areas of very high hazard (up to H5) in road and on properties between Blackbutt Crescent/Peach Grove and to the east of Kew Road/Bold Street. Climate change scenario: the option generally has similar performance to 1% AEP, in terms of reductions in flood levels. Slight reduction in performance due to sea level rise in low elevation areas below 3m AHD, where the reductions fall from -0.07m in the current climate case to -0.01m in the climate change scenario. Number of above-floor flooded properties reduced by 36 in the 1% AEP event (34 residential, 2 commercial). 	\$15,680,000	TBC	TBC

Draft Options Assessment Report

4. Non-Structural Measures

4.1 Property Modification Measures

4.1.1 Voluntary Purchase of High Hazard Properties

Voluntary purchase of high flood hazard properties may be considered in order to eliminate the potentially high risk of loss of life and damage to property from these areas by physically removing the dwellings at risk to hazardous flood conditions.

OEH has prepared Guidelines for Voluntary Purchase Schemes (OEH, 2013b). This describes the eligibility criteria for NSW Government funding for VP schemes, which include:

- no other feasible flood risk management options are available to address the risk to life at the property;
- residential properties and not commercial and industrial properties;
- buildings were approved and constructed prior to 1986;
- properties are located either 1) within high hazard areas where there is a significant risk to life for occupants and those who may have to evacuate or rescue them, 2) within a floodway where the removal of the house may be part of a floodway clearance program aimed to reduce the significant impacts caused by the existing development on flood behaviour elsewhere in the floodplain, or 3) within the footprint of a proposed flood mitigation measure or where a flood mitigation measure may result in a significant increase in flood risk to a house that cannot be protected.

Two high flood hazard properties have been nominated for voluntary purchase in order to form a floodway to relieve flooding semi-trapped points in Koonwarra Street and Pelican Court, refer to Options 4A and 4C in the flood modification measures (Section 3.4.2.1).

In total, there are 19 residential properties affected by high hazard flooding, considered as being H5 or higher, in the 1% AEP event which may be eligible for voluntary purchase. This excludes any villas, units or strata buildings. There are limits to the funding available for a voluntary purchase program and additional eligibility criteria may apply. Feasibility of a voluntary purchase program is likely to be limited by the relatively high property prices in the study area. Further assessment needs to be undertaken with the finalised structural mitigation options and whether these eliminate the high flood hazard conditions to particular properties.

4.1.2 Voluntary House Raising

Voluntary house raising has long been a traditional response to flooding in New South Wales, as demonstrated by the number of raised houses in frequently flooded urban areas such as Lismore and Fairfield (Floodplain Development Manual, 2005). There are advantages associated with house raising which are noted as follows (Frost and Rice, 2003).

- A reduction of flood damages due to personal items being stored above the nominated flood level
- A reduction in danger to personal safety and a reduction in the cost of potentially needing to evacuate residents
- Potentially cost-effective alternative to voluntary purchase, with positive social outcomes (i.e. home owners who have strong sentimental value on their properties can remain in the same location).

Some of the disadvantages include:

- Residents' concern over security and privacy due to an open, exposed ground floor
- Accessibility issues for the elderly or people with a disability
- Following raising, residents may develop a false sense of security from impacts. This can result in a belief that they will not be impacted by flooding or reluctance to evacuate when required.

Draft Options Assessment Report

- Over time and when flooding has not occurred, residents may be inclined to utilise the ground floor and converting it to a habitable area.

OEH has prepared *Guidelines for Voluntary House Raising Schemes* (OEH, 2013a). This describes the eligibility criteria for NSW Government funding of VHR schemes including:

- not located in floodways;
- limited to areas of low flood hazard;
- the suitability of individual houses for raising;
- residential properties and not commercial and industrial properties;
- buildings were approved and constructed prior to 1986;
- properties cannot be benefiting substantially from other floodplain mitigation measures;
- VHR should generally return a positive net benefit in damage reduction relative to its cost (benefit–cost ratio greater than 1).

Inclusion of a property in a voluntary house raising scheme places no obligation on the owner to sell the property or on the council or NSW Government to fund the purchase of the property. Owner participation in the scheme is voluntary and there are limitations on the availability of funding.

Whilst house raising can be considered for a range of building types, it is easiest and cheapest for timber-framed houses clad with non-masonry materials. A large proportion of houses in the study area which area flood-affected are of single or double brick construction which are considered costly and impractical for raising.

Due to the factors outline above, house raising is not considered feasible as a mitigation measure for dwellings within the study area.

4.1.3 Planning and development controls

4.1.3.1 General

Land use planning and development controls are an essential element in managing flood risk and the most effective way of ensuring future flood risk is managed appropriately. Planning controls including flood planning levels, flood related development control plans and restrictions on permissible types of development in different parts of the floodplain are recommended to ensure that development in the study area occurs in an appropriate manner in relation to flooding.

4.1.3.2 Amendments to LEP

The *Port Macquarie Hastings Local Environmental Plan 2011* (LEP 2011) provides land use controls for the LGA and has been developed to be consistent with the FDM. Part 7.3 of the LEP 2011 contains clauses on flood planning. Excerpts of this clause are provided below:

(1) *The objectives of this clause are as follows:*

- (a) *to minimise the flood risk to life and property associated with the use of land,*
- (b) *to allow development on land that is compatible with the land's flood hazard, taking into account projected changes as a result of climate change,*
- (c) *to avoid significant adverse impacts on flood behaviour and the environment.*

(2) *This clause applies to:*

- (a) *land that is identified as "Flood planning area" on the Flood Planning Map, and*

Draft Options Assessment Report

JACOBS

(b) other land at or below the flood planning level.

(3) Development consent must not be granted to development on land to which this clause applies unless the consent authority is satisfied that the development:

(a) is compatible with the flood hazard of the land, and

(b) is not likely to significantly adversely affect flood behaviour resulting in detrimental increases in the potential flood affectation of other development or properties, and

(c) incorporates appropriate measures to manage risk to life from flood, and

(d) is not likely to significantly adversely affect the environment or cause avoidable erosion, siltation, destruction of riparian vegetation or a reduction in the stability of river banks or watercourses, and

(e) is not likely to result in unsustainable social and economic costs to the community as a consequence of flooding.

(4) A word or expression used in this clause has the same meaning as it has in the Floodplain Development Manual (ISBN 0 7347 5476 0) published by the NSW Government in April 2005, unless it is otherwise defined in this clause.

The LEP includes mapping of known flood liable lands, where there are flood studies completed for those areas. It currently does not include the overland flood areas of the North Brother local catchments.

While the LEP does require consideration of the compatibility of development to the "flood hazard of the land", it only makes reference to the flood liable lands and flood planning area. It does not make reference to the actual flood hazard rating, that being governed by flood depth, velocity and/or velocity-depth product, or to the hydraulic category of the floodplain (floodway, flood storage etc.).

Recommendation

The following updates to LEP 2011 and the Section 10.7 certificates are recommended:

- Amendment of LEP 2011 to include the North Brother local catchments flood mapping on the LEP Flood Planning Map. The current flood prone land mapping and flood planning area mapping does not include this study area.
- The Section 10.7 certificates should provide flood information for properties such as flood levels and flood planning levels across the lot, in addition to the flood hazard and hydraulic categories present on each lot.

4.1.3.3 Amendments to Flood Policy

Overview

Council's Flood Policy (2015) outlines the development controls to be applied to proposed developments to manage flood risk to occupants and minimise flood damages to the development and flood impacts to adjacent properties. Development controls include flood planning level categories and provisions for different types of development (permissible development types, minimum floor levels), considerations for filling, fencing, boundary adjustments, rezoning and subdivision in the different hydraulic zones in the floodplain. The flood policy draws on the design flood information borne from Council's existing flood studies

Prescriptive Controls

Prescriptive controls that apply to a particular Flood Risk include:

Draft Options Assessment Report

- Floor Level
- Flood Proofing
- Flood Impact on Other Properties
- Site Access and Flood Evacuation Requirements.

The Flood Policy provides requirements for different types of development in relation to these prescriptive controls. These requirements vary depending on the hydraulic classification and flood hazard conditions on the property.

Hydraulic Classifications

The flood policy provides definitions for the different hydraulic classifications of the floodplain, including floodway, flood storage and flood fringe areas. It outlines the type and nature of development which is allowed according to the hydraulic classifications on the property. Generally, new development is not allowed in floodway areas. There may be circumstances in which certain types of limited or Minor Development (including infill development, redevelopment, replacement development or minor extensions) could proceed, subject to a range of considerations.

Flood Hazard

The flood policy provides guidance on how proposed developments are to comply with the prescribed development controls and provisions. One of these is consideration of the flood hazard on the property. The flood hazard categorisation system adopted in the flood policy differs from the hazard categorisation system recommended in Australian Rainfall and Runoff 2019, which is based on recent research and which is presented in *Australian Disaster Resilience Handbook 7. Managing the Floodplain: A Guide to Best Practice in Flood Risk Management in Australia* (AIDR, 2017a) and *Guideline 7-3 Flood Hazard* (AIDR, 2017b). The flood hazard mapping prepared in this study for the North Brother Local Catchments follows the ARR 2019 system.

Flood Planning Levels

The Flood Policy defines the adopted flood planning levels for various types of proposed development. Council has adopted a 0.5m freeboard across the whole LGA, including both mainstream and overland flood areas. The different flood planning level categories define the minimum levels for floor levels, flood proofing, flood impacts to other properties and site access (e.g. roads) and evacuation routes for different types of development.

Table 4-1 Flood Planning Level (FPL) Categories

Category Proposed	FPL Category Description
FPL1	20 year ARI Flood level (No allowance for Climate Change, No Freeboard)
FPL2	100 year ARI Flood level + Climate Change Allowance (No Freeboard)
FPL3	100 year ARI Flood level + Climate Change Allowance + 500mm Freeboard
FPL4	Probable Maximum Flood (PMF)

Draft Options Assessment Report

**Comments and Recommendations**

- The Flood Policy should be updated to refer to this North Brother Local Catchments Flood Study and the flood mapping and other design flood data following adoption of this study by Council.
- Design flood events are referred to in the Flood Policy in terms of Average Recurrence Interval (ARI) which is not in line with current floodplain management best practice of referring to events by Annual Exceedance Probability (AEP). Update to the Flood Policy should include reference to AEP terminology and/or definitions on conversion in its glossary (i.e. 5% AEP = 20 year ARI, and 1% AEP = 100 year ARI).
- The Flood Policy has been developed mainly in the context of mainstream flooding. For example, in relation to reliable site access for new residential developments, the Flood Policy states that Council will only support development where "Effective Warning Time and reliable access is available for evacuation. Developments will be required to demonstrate that evacuation through low hazard conditions during the early warning period of a Flood is achievable. A minimum 8 hours Effective Warning Time must be available to a particular site". For overland flooding such warning time is not available (usually the warning time is less than 1 hour). Therefore, it is recommended to update the Flood Policy to provide exemptions or modified conditions for development of properties subject to overland flooding.
- Continuing from the item above, mapping should be provided and included/cited in the Flood Policy which indicates the areas subject to mainstream flooding (as defined by the riverine flood studies) and those subject to overland flooding (as defined in this and subsequent overland flood studies and which are above the extent of mainstream flooding). This mapping will be prepared as a part of this study, for the North Brother study area.
- The Flood Policy needs to state that both the mainstream and overland flooding conditions need to be considered for development and re-development of properties.
- Consider incorporation of the ARR 2019 flood hazard categorisation system into the Flood Policy to reflect the current best practice in defining flood hazard conditions.
- "High flood hazard" could be considered as H3 or higher hazard (ARR 2019 hazard categories). The lower threshold for H3 hazard is similar or slightly lower than the high and transitional hazard categories in the *Floodplain Development Manual* method.

4.1.3.4 Rezoning

Rezoning could be considered where there is an incompatibility of the flood hazard or hydraulic category on the property compared to the type of land use. Section 2.4 identifies sensitive properties and critical facilities which are affected by high hazard flooding and floodway (as well as flood storage and flood fringe) areas. Unlike mainstream flooding, the high hazard and floodway areas are generally localised in the 1% AEP event. Rezoning of entire properties, especially larger premises occupied by schools, nursing homes etc. to preclude those land uses is likely to result in the suitable parts of the properties being underutilised.

Properties with larger areas of high hazard up to H5/H6 in PMF include:

- St Josephs school
- Laurieton Retirement Village
- Stockland Camden View Retirement Village.

Rezoning of these properties in response to flood hazard in the PMF could be considered, although many of these sensitive properties are large facilities and there is an absence of large vacant lots to which these facilities could be relocated, and relocation would be an expensive and complex exercise. Other measures and development controls may be appropriate to manage redevelopment of these properties. Therefore, rezoning of the identified affected sensitive properties and critical facilities is generally not recommended, based on the overland flood conditions presented in this study. Rezoning in response to mainstream flood conditions has not been assessed.

Draft Options Assessment Report

**4.1.4 Council Redevelopment**

This measure is an alternative to voluntary purchase (refer Section 4.1.1) whereby Council would still purchase high-impacted flooded properties on a voluntary basis but instead of rezoning the land, the property is redeveloped with new dwellings designed to withstand the high hazard flooding conditions on the property and resist flood damages. The intention is for the redeveloped property to be resold with a break-even financial outcome, which offsets the high property purchase costs which tend to make voluntary purchase unfeasible.

However, initial assessment identifies a number of issues with this approach:

- It would be in conflict with Council's Flood Policy in addition to other planning policies which preclude (re)development in floodway and high flood hazard areas.
- This approach may need to be fully funded by Council.
- Specialised building design and engineering would be required to withstand high to extreme hazard flood forces (H5 and H6 hazard rating) in the 1% AEP event and rarer, which adds to the cost of this option.
- This approach would not reduce the risk of flooding on the population in the PMF.
- There is a high upfront cost to be borne by Council for each redevelopment.
- There may also be probity issues in the case of Council acquiring the property, redeveloping and reselling the property.
- The generally older characteristics of the local population may mean that there is a reduced capacity for the residents of properties to move elsewhere. There may be reluctance to sell-off the properties in this regard. Conversely, however, there may be increased uptake in this option for residents who are frequently affected by flooding.

Recommendation

Further consideration by Council is required to determine if these issues can be addressed to make this a viable approach. Development controls such as floor levels above the PMF for flood refuge would need to be assessed for suitability in a town planning context.

4.1.5 Flood Proofing and Flood Compatible Design of Individual Buildings

Flood compatible design refers to the design and construction of buildings with appropriate water-resistant materials such that flood damage to the building itself (structural damage) and possibly its contents, is minimised should the building be inundated. *Reducing Vulnerability of Buildings to Flood Damage* (Hawkesbury-Nepean Floodplain Management Steering Committee, 2007) provides a comprehensive discussion of the various options for building design to minimise the impact of flooding. These include structural and architectural design and building materials, in addition to design considerations such as setting of electrical equipment above flood levels to reduce risk of their damage.

Flood compatible and flood proofing design measures are prescribed for different types of development in Council's Flood Policy (2015), including the minimum elevations in the development which the flood compatible materials must reach in all parts of proposed buildings.

Promotion of types of flood proofing measures should also be undertaken as a part of flood awareness and readiness improvement programs (refer Section 4.2.3).

Flood proofing of residential properties can also refer to implementing external measures such as walls or landscaping to redirect flows away from and around vulnerable parts of the house, such as doorways and other entry points. It is generally a measure that can be pursued by individual property owners in low hazard areas to prevent above floor inundation but may result in diversion of flows to neighbouring properties and resultant impacts. A flood impact assessment may be required by Council as per the Flood Policy to ensure adverse flood impacts to adjacent properties are prevented.

Draft Options Assessment Report

**Recommendation**

Promotion of flood proofing measures should also be included in flood education and awareness programs.

4.2 Response Modification Measures

4.2.1 Flood Warning Systems

The study area includes local catchments and overland flow paths where flash flooding may occur. Flash flood catchments are those defined as catchments in which less than six hours may elapse between heavy rainfall and flooding. Flash flooding usually results from relatively short intense bursts of rainfall, commonly from thunderstorms. This is problematic in urban areas where drainage systems may not cope. Flash floods tend to be quite local and it is difficult to provide effective warning because of their rapid onset. The reasons for this have been identified for flash flood catchments as follows (McKay, 2004, 2008):

- Flash floods are less predictable than larger scale flooding. Rainfall over small catchments is usually not well predicted by numerical weather prediction models
- For flash floods, there is insufficient time to develop reliable flood warnings and for effective the dissemination and response to the flood warnings. More rapid user response is required, which necessitates specialised communication systems and a high level of public flood awareness
- A reliance on rainfall triggers increases the frequency of false alarms
- The use of water level triggers does not allow sufficient time for response.

It is not possible for BOM to issue specific predictions for flash flood catchments based on their regional rainfall gauging network. More importance is placed on the role of the SES and other agencies to interpret the regional warnings which are provided by BOM to warn the community of the potential road closures and damage as a result of predicted storms and flash floods.

Flash flood warning systems have been proposed for some catchments, such as the Avalon overland flood areas on the Northern Beaches of Sydney. However, the time to peak for critical storm events in the Avalon area is about 1 hour from the start of the storm, and about 30 minutes after peak rainfall rates in the design storm event (MHL, 2016), which offers a short warning time. The critical duration in that area for the 1% AEP event is the 2 hour event.

In contrast, although some of the lower areas in North Brother study area have a critical storm duration of up to 2 hours, the critical duration for most of the study area is generally the 30 minute duration event. Time to peak in many flow paths, especially on known problem areas further up the mountain, is in the range of 15 minutes. Due to the steepness of the local catchments the overland flooding is expected to peak almost instantaneously (5 to 10 minutes) in response to high intensity rainfall. Therefore, there would be minimal to no warning provided for many locations in the study area. Potential delays in analysis of rainfall data and subsequent dissemination of warnings via phone or text systems would further erode the warning time.

Given the issues and challenges discussed above, the development of a flash flood warning system for the study area is not recommended. Greater emphasis should be placed on the importance of flood education and awareness in the community. Local residents have a role in being able to understand how the issued weather warnings and actual occurrences of intense rainfall during a storm may translate to flooding impacts to their properties, and in addition, be aware of ways to prepare their properties to reduce flood damages and risk to life.

Draft Options Assessment Report

**4.2.2 Flood Depth Signage on Roads**

A number of road crossings are affected by significant flooding. Flood depth signage is recommended for key locations primarily to warn drivers of the flood hazard during a flood event and reduce occurrences of people driving into floodwaters. Flood depth signage may also act as a passive reminder to residents of the potential for flooding in their neighbourhood streets. Nominated locations are where H3 or higher flood hazard occurs in the 1% AEP event, including:

- Ocean Drive 70m east of Sirius Drive
- Ocean Drive 380m east of Fairwinds Avenue
- Ocean Drive 30m east of The Gateway
- Bold Street sag between Laurie Street and Mill Street
- Bold Street sag between Mill Street and Hanley Street.

While there are other roads affected by high hazard flooding conditions, Ocean Drive and Bold Street are higher-trafficked roads and crossed by major flow paths with a higher risk of vehicles being washed off the road.

Recommendation

It is recommended that flood depth signage be installed at key road crossings as a warning of the flood hazard during a flood event and reduce occurrences of people driving into floodwaters, in addition as a passive reminder of flooding risk.

4.2.3 Flood Education, Awareness and Readiness

Flood education and awareness should be promoted throughout the study area. Measures may include information brochures in English and multi-lingual including promotion of NSW SES FloodSafe brochures and website (<http://www.floodsafe.com.au/>). Additionally, Council or SES may run educational workshops or distribute information sheets to help people plan and prepare for a flood.

Section 10.7 certificates issued by Council could be used to inform property owners about flood risk to their properties, where there are flood studies completed within Port Macquarie Hastings LGA.

Additionally, Council's floodplain management web page and social media could be further developed to enhance the messaging on flood risk and flood preparation, particularly in relation to overland flooding. This may include flood mapping on an interactive mapping portal on the website itself rather than links to the flood study reports and mapping, where it can be difficult for community members to navigate through often lengthy technical reports. Information on, or links to external websites (SES, floodsafe, etc), should be included for advice for residents on how to prepare for flooding.

During flood events, Council should a list of road closed to flooding (and roads recently opened as the flooding recedes) on their website and social media. This will encourage road users to find alternative routes and reduce the number of drivers encountering flooded roads and potentially driving into floodwaters.

A flood education and awareness program should be developed by Council which outlines and schedules various flood education methods to be implemented (e.g. brochures, news articles highlighting previous flooding, SES events, Council web pages etc.). The program should be reviewed after each significant flood event to assess the effectiveness of the program, reinvigorate flood awareness in the community and plan the roll-out of new flood information as it becomes available.

As a part of an overall flood education and awareness program for the study area, Council should consult with operators of sensitive properties and facilities to provide information on the flood risk on the property and

Draft Options Assessment Report**JACOBS**

promote the development of a flood management plan for the properties (refer to Section 4.2.5 for further details).

Recommendation

It is recommended that Council develops a flood education program to promote flood awareness and readiness in the community. Measures may include:

- Promotion of FloodSafe brochures to help residents understand the flood risk and prepare their property and personal plans for a flooding event.
- Flood depth signage on key roads affected by flooding.
- List of road closures and roads recently opened on website/social media page during flood events
- Section 10.7 certificates to inform property owners about flood risk to their properties
- Provide flood mapping on an interactive mapping portal on Council's website for easier viewing
- Promotion and support for SES information events
- Enhanced messaging on flood risk and flood preparedness on Council's floodplain management webpage particularly for overland flooding.
- Consult with operators of sensitive properties and occupants of dwellings affected by high flood hazard to provide information on the flood risk and promote the development of a flood management plan for the properties.

The program should be reviewed after each significant flood event.

4.2.4 Improved flood evacuation response and procedures

Flood evacuation is under the control of the SES and the SES needs to update the current evacuation planning based on information presented in this report, including flood depth and hazard mapping.

Recommendation

It is recommended that the SES updates the current emergency planning, such as development of a Local Flood Plan or update of the EMPLAN, based on information presented in this study.

4.2.5 Development of Flood Management Plans

A flood management plan is a document which outlines and discusses the measures to help manage the flood risk on a particular property, and its occupants and visitors to the site. The purposes of the plan are:

- To address existing, future and continuing flood risks on the site;
- To promote a satisfactory awareness of expected flood behaviour and risks;
- To identify measures to become flood prepared, and
- To recommend a course of action during and after flood events.

Flood management plans can be likened to a fire evacuation plan or a bushfire emergency plan and should be tailored specifically for a particular property. It outlines procedures for prior, during and after a flood event and the roles and responsibilities, generally of facility staff, in enacting the flood management plan. It may also describe evacuation routes and refuge places.

Draft Options Assessment Report**JACOBS**

Several facilities are affected by very high to extreme (H5, up to H6) flood hazard in the PMF. Development of a flood management plan for the facilities should be considered to manage the flood risk to occupants. Council and SES should also consider encouraging and helping occupants of private dwellings to prepare their own flood management plans. Council should consult with the facility operators and occupants of dwellings subject to high flood hazard as a part of an overall flood education and awareness program for the study area and promote the development of a flood management plan for the properties.

As a part of the development of a flood management plan, evacuation from the site may be identified as a suitable option. This would require safe evacuation routes to be identified or otherwise new safe evacuation access installed (see Section 1.1.1). If sheltering-in-place in facility buildings is identified as a more suitable approach, an assessment of the structural stability of the buildings in the flood conditions should be undertaken.

Recommendation

Council should consult with high flood risk facilities and occupants of dwellings subject to high flood hazard regarding management of flood risk on the site. Development of a flood management plan for the site should be considered by the facility operators with the assistance of Council/SES.

Draft Options Assessment Report

5. Conclusions and Recommendations

5.1 Conclusions

Six selected structural options and combinations of options have been assessed in the TUFLOW hydraulic model for the North Brother local catchments. The options were selected by Council and the floodplain risk management committee from a long-list of options for 16 locations in the study area. The hydraulic performance, site constraints and improvements in flood damages have been confirmed for the selected options. The following options have high merit in terms of reductions in flood damages and improvements in flood hazard:

- Option 4A+4B+4C
- Option 6B+6C+6D+6E
- Option 9B.

Subsequent costing of these options in addition to cost benefit and multi-criteria analyses will confirm the economic feasibility and viability of these options.

In addition, a range of non-structural options have been evaluated for the study area. These include measures related to planning and policy, property modification and flood emergency management and response modification. Recommendations have been made in relation to these measures with consideration of the flood behaviour in the study area.

5.2 Recommendations

- Council and the committee are to review and consider the findings on the hydraulic and damages assessment for the selected options. Feedback is sought on the assessment, including any refinements to the options.
- Consultation with stakeholders, landowners and community is to be undertaken on the short-listed options.
- The hydraulic modelling will be subsequently updated based on proposed refinements to the options following Council/committee and stakeholder consultation. The flood damages will be updated, and costing of options undertaken for input into a cost-benefit analysis. A multi-criteria analysis will also be undertaken to consider other aspects of the options.
- A floodplain risk management study and plan will be formed based on the subsequent outcomes, for community consultation and approval by Council.

Draft Options Assessment Report

7. Glossary

Annual Exceedance Probability (AEP)

The chance of a flood of a given or larger size occurring in any one year, usually expressed as a percentage. In this study AEP has been used consistently to define the probability of occurrence of flooding. It is to be noted that design rainfalls used in the estimation of design floods up to and including 100 year ARI (ie. 1% AEP) events was derived from 1987 Australian Rainfall and Runoff. The following relationships between AEP and ARI applies to this study (AR&R, 2016).

Frequency Descriptor	EY	AEP (%)	AEP (1 in x)	ARI
Very frequent	12			
	6	99.75	1.002	0.17
	4	98.17	1.02	0.25
	3	95.02	1.05	0.33
	2	86.47	1.16	0.50
	1	63.2	1.58	1.00
Frequent	0.69	50.00	2	1.44
	0.5	39.35	2.54	2.00
	0.22	20.00	5	4.48
	0.2	18.13	5.52	5.00
	0.11	10.00	10.00	9.49
Infrequent	0.05	5.00	20	20.0
	0.02	2.00	50	50.0
	0.01	1.00	100	100
Rare	0.005	0.50	200	200
	0.002	0.20	500	500
	0.001	0.10	1000	1000
	0.0005	0.05	2000	2000
Extremely Rare	0.0002	0.02	5000	5000
Extreme			PMP	

Australian Height Datum (AHD)

A common national surface level datum approximately corresponding to mean sea level.

Average Annual Damage (AAD)

Depending on its size (or severity), each flood will cause a different amount of flood damage to a flood prone area. AAD is the average damage per year that would

Draft Options Assessment Report

occur in a nominated development situation from flooding over a very long period of time.

Average Recurrence Interval (ARI)	The long-term average number of years between the occurrences of a flood as big as or larger than the selected event. For example, floods with a discharge as great as or greater than the 20 year ARI flood event will occur on average once every 20 years. ARI is another way of expressing the likelihood of occurrence of a flood event.
Catchment	The land area draining through the main stream, as well as tributary streams, to a particular site. It always relates to an area above a specific location.
DRAINS	DRAINS is a computer program which is used to simulate local catchment rainfall-runoff and stormwater system hydraulics and is widely used across Australia.
Development	<p>Is defined in Part 4 of the EP&A Act</p> <p><u>In fill development</u>: refers to the development of vacant blocks of land that are generally surrounded by developed properties and is permissible under the current zoning of the land. Conditions such as minimum floor levels may be imposed on infill development.</p> <p>New development: refers to development of a completely different nature to that associated with the former land use. Eg. The urban subdivision of an area previously used for rural purposes. New developments involve re-zoning and typically require major extensions of exiting urban services, such as roads, water supply, sewerage and electric power.</p> <p>Redevelopment: refers to rebuilding in an area. Eg. As urban areas age, it may become necessary to demolish and reconstruct buildings on a relatively large scale. Redevelopment generally does not require either re-zoning or major extensions to urban services.</p>
Effective Warning Time	The time available after receiving advise of an impending flood and before the floodwaters prevent appropriate flood response actions being undertaken. The effective warning time is typically used to move farm equipment, move stock, raise furniture, evacuate people and transport their possessions.
Exceedances per Year (EY)	The number of times an event is likely to occur or be exceeded within any given year.
Flood	Relatively high stream flow which overtops the natural or artificial banks in any part of a stream, river, estuary, lake or dam, and/or local overland flooding associated with major drainage before entering a watercourse, and/or coastal inundation resulting from super-elevated sea levels and/or waves overtopping coastline defences excluding tsunami.
Flood fringe areas	The remaining area of flood prone land after floodway and flood storage areas have been defined.

Draft Options Assessment Report

Flood liable land	Is synonymous with flood prone land (i.e.) land susceptibility to flooding by the PMF event. Note that the term flooding liable land covers the whole floodplain, not just that part below the FPL (see flood planning area)
Floodplain	Area of land which is subject to inundation by floods up to and including the probable maximum flood event, that is flood prone land.
Floodplain risk management options	The measures that might be feasible for the management of particular area of the floodplain. Preparation of a floodplain risk management plan requires a detailed evaluation of floodplain risk management options.
Floodplain risk management plan	A management plan developed in accordance with the principles and guidelines in this manual. Usually include both written and diagrammatic information describing how particular areas of flood prone land are to be used and managed to achieve defined objectives.
Flood plan (local)	A sub-plan of a disaster plan that deals specifically with flooding. They can exist at state, division and local levels. Local flood plans are prepared under the leadership of the SES.
Flood planning levels (FPLs)	Are the combination of flood levels (derived from significant historical flood events or floods of specific AEPs) and freeboards selected for floodplain risk management purposes, as determined in management studies and incorporated in management plans. FPLs supersede the "designated flood" or the "flood standard" used in earlier studies.
Flood proofing	A combination of measures incorporated in the design, construction and alteration of individual buildings and structures subject to flooding, to reduce or eliminate flood damages.
Flood readiness	Readiness is an ability to react within the effective warning time.
Flood risk	<p>Potential danger to personal safety and potential damage to property resulting from flooding. The degree of risk varies with circumstances across the full range of floods. Flood risk in this manual is divided into 3 types, existing, future and continuing risks. They are described below.</p> <p><u>Existing flood risk</u>: the risk a community is exposed to as a result of its location on the floodplain.</p> <p><u>Future flood risk</u>: the risk a community may be exposed to as a result of new development on the floodplain.</p> <p><u>Continuing flood risk</u>: the risk a community is exposed to after floodplain risk management measures have been implemented. For a town protected by levees, the continuing flood risk is the consequences of the levees being overtopped. For an area without any floodplain risk management measures, the continuing flood risk is simply the existence of its flood exposure.</p>
Flood storage areas	Those parts of the floodplain that are important for the temporary storage of floodwaters during passage of a flood. The extent and behaviour of flood storage areas may change with flood severity, and loss of flood storage can increase the

Draft Options Assessment Report

severity of flood impacts by reducing natural flood attenuation. Hence, it is necessary to investigate a range of flood sizes before defining flood storage areas

Floodway areas	Those areas of the floodplain where a significant discharge of water occurs during floods. They are often aligned with naturally defined channels. Floodways are areas that, even if only partially blocked, would cause a significant redistribution of flood flow, or a significant increase in flood levels.
Freeboard	Provides reasonable certainty that the risk exposure selected in deciding on a particular flood chosen as the basis for the FPL is actually provided. It is a factor of safety typically used in relation to the setting of floor levels, levee crest levels, etc. Freeboard is included in the flood planning level.
Hazard	A source of potential harm or situation with a potential to cause loss. In relation to this manual the hazard is flooding which has the potential to cause damage to the community.
Local overland flooding	Inundation by local runoff rather than overbank discharge from a stream, river, estuary, lake or dam.
m AHD	Metres Australian Height Datum (AHD)
m/s	Metres per second. Unit used to describe the velocity of floodwaters.
m ³ /s	Cubic metres per second or "cumecs". A unit of measurement of creek or river flows or discharges. It is the rate of flow of water measured in terms of volume per unit time.
Mainstream flooding	Inundation of normally dry land occurring when water overflows the natural or artificial banks of a stream, river, estuary, lake or dam.
Modification measures	Measures that modify either the flood, the property or the response to flooding.
Overland flow path	The path that floodwaters can follow as they are conveyed towards the main flow channel or if they leave the confines of the main flow channel. Overland flow paths can occur through private property or along roads.
Probable Maximum Flood (PMF)	The largest flood that could conceivably occur at a particular location, usually estimated from probable maximum precipitation coupled with the worst flood producing catchment conditions. Generally, it is not physically or economically possible to provide complete protection against this event. The PMF defines the extent of flood prone land, that is, the floodplain.
Probable Maximum Precipitation (PMP)	The PMP is the greatest depth of precipitation for a given duration meteorologically possible over a given size storm area at a particular location at a particular time of the year, with no allowance made for long-term climatic trends (World Meteorological Organisation, 1986). It is the primary input to PMF estimation.
Risk	Chance of something happening that will have an impact. It is measured in terms of consequences and likelihood. In the context of the manual it is the likelihood of

Draft Options Assessment Report

	consequences arising from the interaction of floods, communities and the environment.
Runoff	The amount of rainfall which ends up as a streamflow, also known as rainfall excess.
Stage	Equivalent to water level (both measured with reference to a specified datum)
TUFLOW	TUFLOW is a computer program which is used to simulate free-surface flow for flood and tidal wave propagation. It provides coupled 1D and 2D hydraulic solutions using a powerful and robust computation. The engine has seamless interfacing with GIS and is widely used across Australia.
